List of Figures	xxxii
List of Tables	xxxv
CHAPTER 1	
A Simple Introduction to Continuous-Time Stochastic Processes	1
Continuous-Time Diffusion Processes	3
Wiener Process	3
Ito Process	5
Ito's Lemma	7
Simple Rules of Stochastic Differentiation and Integration	9
Obtaining Unconditional Mean and Variance of Stochastic Integrals under Gaussian Processes	9
Examples of Gaussian Stochastic Integrals	11
Mixed Jump-Diffusion Processes	14
The Jump-Diffusion Process	14
Ito's Lemma for the Jump-Diffusion Process	15
CHAPTER 2	
Arbitrage-Free Valuation	17
Arbitrage-Free Valuation: Some Basic Results	18
A Simple Relationship between Zero-Coupon Bond Prices and Arrow Debreu Prices	20
The Bayes Rule for Conditional Probabilities of Events	20
The Relationship between Current and Future AD Prices	21
The Relationship between Cross-Sectional AD Prices and Intertemporal Term Structure Dynamics	22
Existence of the Risk-Neutral Probability Measure	23
Stochastic Discount Factor	28
Radon-Nikodym Derivative	30
Arbitrage-Free Valuation in Continuous Time	31
Change of Probability Measure under a Continuous Probability Density	32

The Girsanov Theorem and the Radon-Nikodym Derivative	34
Equivalent Martingale Measures	35
Stochastic Discount Factor and Risk Premiums	43
The Feynman-Kac Theorem	45
CHAPTER 3	
Valuing Interest Rate and Credit Derivatives: Basic Pricing Frameworks	49
Eurodollar and Other Time Deposit Futures	54
Valuing Futures on a Time Deposit	58
Convexity Bias	60
Treasury Bill Futures	61
Valuing T-Bill Futures	62
Convexity Bias	63
Treasury Bond Futures	64
Conversion Factor	65
Cheapest-to-Deliver Bond	67
Options Embedded in T-Bond Futures	68
Valuing T-Bond Futures	68
Treasury Note Futures	72
Forward Rate Agreements	73
Interest Rate Swaps	74
Day-Count Conventions	76
The Financial Intermediary	77
Motivations for Interest Rate Swaps	78
Pricing Interest Rate Swaps	82
Interest Rate Swaptions	85
Caps and Floors	88
Caplet	90
Floorlet	91
Collarlet	92
Caps, Floors, and Collars	92
Black Implied Volatilities for Caps and Swaptions	93
Black Implied Volatilities: Swaptions	95
Black Implied Volatilities: Caplet	96
Black Implied Volatilities: Caps	97
Black Implied Volatilities: Difference Caps	98
Pricing Credit Derivatives Using the Reduced-Form Approach	98
Default Intensity and Survival Probability	100

Recovery Assumptions	101
Risk-Neutral Valuation under the RMV Assumption	102
Risk-Neutral Valuation under the RFV Assumption	103
Valuing Credit Default Swaps Using the RFV Assumption	104
A New Taxonomy of Term Structure Models	106

CHAPTER 4

**Fundamental and Preference-Free Single-Factor
Gaussian Models 113**

The Arbitrage-Free Pricing Framework of Vasicek	115
The Term Structure Equation	116
Risk-Neutral Valuation	118
The Fundamental Vasicek Model	120
Bond Price Solution	124
Preference-Free Vasicek+, Vasicek++, and Vasicek+++ Models	128
The Vasicek+ Model	128
The Vasicek++, or the Extended Vasicek Model	136
The Vasicek+++, or the Fully Extended Vasicek Model	140
Valuing Futures	144
Valuing Futures under the Vasicek, Vasicek+, and Vasicek++ Models	145
Valuing Futures under the Vasicek+++ Model	150
Valuing Options	153
Options on Zero-Coupon Bonds	153
Options on Coupon Bonds	157
Valuing Interest Rate Contingent Claims Using Trees	161
Binomial Trees	163
Trinomial Trees	165
Trinomial Tree under the Vasicek++ Model: An Example	171
Trinomial Tree under the Vasicek+++ Model: An Example	178
Appendix 4.1. Bond Price Solution Using the Risk-Neutral Valuation Approach under the Fundamental Vasicek Model and the Preference-Free Vasicek+ Model	181
Appendix 4.2. Hull's Approximation to Convexity Bias under the Ho and Lee Model	184

CHAPTER 5	
Fundamental and Preference-Free Jump-Extended Gaussian Models	187
Fundamental Vasicek-GJ Model	188
Bond Price Solution	191
Jump-Diffusion Tree	194
Preference-Free Vasicek-GJ+ and Vasicek-GJ++ Models	201
The Vasicek-GJ+ Model	202
The Vasicek-GJ++ Model	203
Jump-Diffusion Tree	205
Fundamental Vasicek-EJ Model	206
Bond Price Solution	207
Jump-Diffusion Tree	209
Preference-Free Vasicek-EJ++ Model	216
Jump-Diffusion Tree	218
Valuing Futures and Options	218
Valuing Futures	219
Valuing Options: The Fourier Inversion Method	222
Appendix 5.1 Probability Transformations with a Damping Constant	233
CHAPTER 6	
The Fundamental Cox, Ingersoll, and Ross Model with Exponential and Lognormal Jumps	237
The Fundamental Cox, Ingersoll, and Ross Model	239
Solution to Riccati Equation with Constant Coefficients	242
CIR Bond Price Solution	243
General Specifications of Market Prices of Risk	244
Valuing Futures	245
Valuing Options	248
Interest Rate Trees for the Cox, Ingersoll, and Ross Model	250
Binomial Tree for the CIR Model	250
Trinomial Tree for the CIR Model	263
Pricing Bond Options and Interest Rate Options with Trinomial Trees	273
The CIR Model Extended with Jumps	279
Valuing Futures	283
Futures on a Time Deposit	284
Valuing Options	285
Jump-Diffusion Trees for the CIR Model Extended with Jumps	287

Exponential Jumps	287
Lognormal Jumps	295
CHAPTER 7	
Preference-Free CIR and CEV Models with Jumps	305
Mean-Calibrated CIR Model	307
Preference-Free CIR+ and CIR++ Models	309
A Common Notational Framework	312
Probability Density and the Unconditional Moments	313
Bond Price Solution	315
Expected Bond Returns	317
Constant Infinite-Maturity Forward Rate under Explosive CIR+ and CIR++ Models	318
A Comparison with Other Markovian Preference-Free Models	321
Calibration to the Market Prices of Bonds and Interest Rate Derivatives	322
Valuing Futures	323
Valuing Options	325
Interest Rate Trees	327
The CIR+ and CIR++ Models Extended with Jumps	328
Preference-Free CIR-EJ+ and CIR-EJ++ Models	329
Jump-Diffusion Trees	331
Fundamental and Preference-Free Constant-Elasticity-of- Variance Models	331
Forward Rate and Bond Return Volatilities under the CEV++ Models	333
Valuing Interest Rate Derivatives Using Trinomial Trees	336
Fundamental and Preference-Free Constant-Elasticity-of- Variance Models with Lognormal Jumps	341
CHAPTER 8	
Fundamental and Preference-Free Two-Factor Affine Models	345
Two-Factor Gaussian Models	348
The Canonical, or the A_c , Form: The Dai and Singleton [2002] Approach	349
The A_r Form: The Hull and White [1996] Approach	353
The A_y Form: The Brigo and Mercurio [2001, 2006] Approach	356

Relationship between the $A_{0c}(2)++$ Model and the $A_{0y}(2)++$ Model	358
Relationship between the $A_{0r}(2)++$ Model and the $A_{0y}(2)++$ Model	360
Bond Price Process and Forward Rate Process	361
Probability Density of the Short Rate	362
Valuing Options	363
Two-Factor Gaussian Trees	364
Two-Factor Hybrid Models	373
Bond Price Process and Forward Rate Process	377
Valuing Futures	377
Valuing Options	380
Two-Factor Stochastic Volatility Trees	382
Two-Factor Square-Root Models	393
The A_y Form	393
The A_r Form	399
Relationship between the Canonical Form and the A_r Form	402
Two-Factor “Square-Root” Trees	403
Appendix 8.1 Hull and White Solution of $\eta(t, T)$	410
CHAPTER 9	
Fundamental and Preference-Free Multifactor Affine Models	413
Three-Factor Affine Term Structure Models	416
The $A_{1r}(3)$, $A_{1r}(3)+$, and $A_{1r}(3)++$ Models	416
The $A_{2r}(3)$, $A_{2r}(3)+$, and $A_{2r}(3)++$ Models	421
Simple Multifactor Affine Models with Analytical Solutions	425
The Simple $A_M(N)$ Models	425
The Simple $A_M(N)+$ and $A_M(N)++$ Models	427
The Nested ATSMs	429
Valuing Futures	429
Valuing Options on Zero-Coupon Bonds or Caplets: The Fourier Inversion Method	433
Valuing Options on Coupon Bonds or Swaptions: The Cumulant Expansion Approximation	435
Calibration to Interest Rate Caps Data	448
Unspanned Stochastic Volatility	455
Multifactor ATSMs for Pricing Credit Derivatives	457
Simple Reduced-Form ATSMs under the RMV Assumption	458
Simple Reduced-Form ATSMs under the RFV Assumption	468

Appendix 9.1 The Solution of $\eta(t, T, \phi)$ for CDS Pricing Using Simple $A_M(N)$ Models under the RFV Assumption	476
Appendix 9.2 Stochastic Volatility Jump-Based Mixed-Sign $A_N(N)$ -EJ++ Model and $A_1(3)$ -EJ++ Model	477
The Mixed-Sign $A_N(N)$ -EJ++ Model	478
The $A_1(3)$ -EJ++ Model	479

CHAPTER 10**Fundamental and Preference-Free Quadratic Models 483**

Single-Factor Quadratic Term Structure Model	484
Duration and Convexity	488
Preference-Free Single-Factor Quadratic Model	492
Forward Rate Volatility	495
Model Implementation Using Trees	497
Extension to Jumps	498
Fundamental Multifactor QTSMs	501
Bond Price Formulas under $Q_3(N)$ and $Q_4(N)$ Models	505
Parameter Estimates	506
Preference-Free Multifactor QTSMs	508
Forward Rate Volatility and Correlation Matrix	515
Valuing Futures	518
Valuing Options on Zero-Coupon Bonds or Caplets: The Fourier Inversion Method	524
Valuing Options on Coupon Bonds or Swaptions: The Cumulant Expansion Approximation	527
Calibration to Interest Rate Caps Data	531
Multifactor QTSMs for Valuing Credit Derivatives	537
Reduced-Form $Q_3(N)$, $Q_3(N)+$, and $Q_3(N)++$ Models under the RMV Assumption	537
Reduced-Form $Q_3(N)$ and $Q_3(N)+$ Models under the RFV Assumption	543
Appendix 10.1 The Solution of $\eta(t, T, \phi)$ for CDS Pricing Using the $Q_3(N)$ Model under the RFV Assumption	547

CHAPTER 11**The HJM Forward Rate Model 551**

The HJM Forward Rate Model	552
Numerical Implementation Using Nonrecombining Trees	556
A One-Factor Nonrecombining Binomial Tree	557
A Two-Factor Nonrecombining Trinomial Tree	565
Recursive Programming	569
A Recombining Tree for the Proportional Volatility HJM Model	572

Forward Price Dynamics under the Forward Measure	573
A Markovian Forward Price Process under the Proportional Volatility Model	575
A Recombining Tree for the Proportional Volatility Model Using the Nelson and Ramaswamy Transform	576
CHAPTER 12	
The LIBOR Market Model	583
The Lognormal Forward LIBOR Model (LFM)	585
Multifactor LFM under a Single Numeraire	588
The Lognormal Forward Swap Model (LSM)	591
A Joint Framework for Using Black's Formulas for Pricing Caps and Swaptions	595
The Relationship between the Forward Swap Rate and Discrete Forward Rates	596
Approximating the Black Implied Volatility of a Swaption under the LFM	597
Specifying Volatilities and Correlations	600
Forward Rate Volatilities: Some General Results	600
Forward Rate Volatilities: Specific Functional Forms	604
Instantaneous Correlations and Terminal Correlations	608
Full-Rank Instantaneous Correlations	612
Reduced-Rank Correlation Structures	619
Terminal Correlations	623
Explaining the Smile: The First Approach	623
The CEV Extension of the LFM	624
Displaced Diffusion Extension of the LFM	626
Unspanned Stochastic Volatility Jump Models	629
Joshi and Rebonato [2003] Model	630
Jarrow, Li, and Zhao [2007] Model	631
An Extension of the JLZ Model	636
Empirical Performance of the JLZ [2007] Model	637
References	647
About the CD-ROM	658
Index	661
