Preface		xi
1 Introduction		
1.1 What is pension economics?		1
1.2 Types of pension scheme		3
1.3 Conclusions		10
Questions		10
References		11
2 Individual Pension Decision Making		13
2.1 The lifecycle model		13
2.2 Pensions and savings		19
2.2.1 Unfunded state pension		19
2.2.2 Private funded pension		20
2.3 Pensions and retirement decisions		23
2.3.1 No pension		23
2.3.2 Private funded pension		24
2.3.3 Unfunded state pension		25
2.3.4 Unfunded state pension with private funded pension		26
2.4 Empirical studies testing the validity of the lifecycle model		28
2.5 The Feldstein lifecycle model with induced retirement		30
2.5.1 The consumption decision		32
2.5.2 Retirement behaviour		37
2.5.3 Discussion		38

viii	Contents	
	2.6 Conclusions	39
	Questions	40
	References	41
3	Corporate Pension Decision Making	47
	3.1 The provision of pensions by corporations	47
	3.2 The role of pensions in employment contracts	48
	3.2.1 Pensions as altruism	48
	3.2.2 Pensions as deferred pay	49
	3.2.3 Pensions as contingent claims	60
	3.3 The nature of corporate pension liabilities	61
	3.4 Quitting and mandatory retirement	64
	3.4.1 Quitting	64
	3.4.2 Mandatory retirement	66
	3.5 Tax and pension fund policy	68
	3.6 Agency costs in pension schemes and pension funds	71
	3.6.1 Insider-trustees	72
	3.6.2 Underfunding the pension scheme	75
	3.6.3 Performance-related fund management fees	80
	3.6.4 Shareholder activism and corporate governance	81
	3.6.5 Moral hazard, adverse selection and disability pensions	82
	3.7 Conclusions	83
	Questions	84
	References	85
4	Pensions in the Diamond–Samuelson Overlapping Generations Model with Certain Lifetimes	89
	4.1 The two-period Diamond–Samuelson OLG model	90
	4.1.1 Individuals	91
	4.1.2 Firms	98
	4.1.3 Market equilibrium	100
	4.1.4 Dynamics, stability and the steady state	101
	4.1.5 Optimality and efficiency	103
	4.2 Pensions in the Diamond–Samuelson OLG model with exogenous labour supply and retirement	105
	4.2.1 State pension scheme	106
	4.2.2 The equivalence of PAYG and government debt	117

	Contents	ix
4.2.3 Transitional and welfare effects	120	
4.2.4 From PAYG to a funded pension scheme	121	
4.3 PAYG pensions in the Diamond–Samuelson OLG model with endogenous labour supply and retirement	122	
4.3.1 Individuals	122	
4.3.2 Market equilibrium	125	
4.3.3 The steady state	126	
4.3.4 Welfare effects	129	
4.3.5 From PAYG to a funded pension scheme	132	
4.4 Conclusions	132	
Questions	133	
References	135	
5 Pensions in the Blanchard–Yaari Overlapping Generations Model with Uncertain Lifetimes	137	
5.1 The Blanchard–Yaari OLG model with uncertain lifetimes	137	
5.1.1 Yaari’s contribution	137	
5.1.2 Blanchard’s contribution	142	
5.1.3 Individuals	142	
5.1.4 Aggregate consumption	144	
5.1.5 Firms	147	
5.1.6 Government and market equilibrium	148	
5.1.7 The phase diagram	149	
5.2 PAYG pensions in the Blanchard–Yaari OLG model with endogenous labour supply and mandatory retirement	152	
5.3 Conclusions	154	
Questions	155	
References	156	
6 The Economics of Ageing and Generational Accounting	157	
6.1 The macroeconomic effects of ageing: Declining population growth and the increasing dependency ratio	157	
6.2 Pensions in the Diamond–Samuelson OLG model with a variable population growth rate	161	
6.3 Generational accounting	164	
6.4 Conclusions	167	
Questions	168	
References	168	

7	Risk Sharing and Redistribution in Pension Schemes	171
7.1	Risks in private pension schemes	174
7.2	Risk sharing in personal pension schemes	175
7.3	Risk sharing in occupational pension schemes	177
7.3.1	Complete markets	178
7.3.2	Incomplete markets	180
7.4	Redistribution in private pension schemes	188
7.5	Private sector market failure and the compensating role of state pension schemes	191
7.6	Risks in state pension schemes	192
7.7	Risk sharing in state pension schemes	196
7.7.1	The family	197
7.7.2	Social security pension system	198
7.8	Redistribution in state pension schemes	206
7.9	The viability of PAYG state pension systems and the transition costs to funding	206
7.9.1	Viability	206
7.9.2	The transition deficit	210
7.10	Conclusions	213
	Questions	215
	References	217
8	Behavioural Pension Economics	221
8.1	The accumulation phase	222
8.1.1	The savings decision	222
8.1.2	The investment decision	227
8.2	The decumulation phase	238
8.2.1	Longevity risk	238
8.2.2	Inflation and capital market risk	239
8.3	Conclusions	240
	Questions	242
	References	243
