<b>Preface</b>	<b>xi</b>
<b>Acknowledgement</b>	<b>xiii</b>
<b>1 Introduction and Notation</b>	<b>1</b>
1.1 Claims process	1
1.1.1 Accounting principles and accident years	2
1.1.2 Inflation	3
1.2 Structural framework to the claims-reserving problem	5
1.2.1 Fundamental properties of the claims reserving process	7
1.2.2 Known and unknown claims	9
1.3 Outstanding loss liabilities, classical notation	10
1.4 General remarks	12
<b>2 Basic Methods</b>	<b>15</b>
2.1 Chain-ladder method (distribution-free)	15
2.2 Bornhuetter–Ferguson method	21
2.3 Number of IBNR claims, Poisson model	25
2.4 Poisson derivation of the CL algorithm	27
<b>3 Chain-Ladder Models</b>	<b>33</b>
3.1 Mean square error of prediction	33
3.2 Chain-ladder method	36
3.2.1 Mack model (distribution-free CL model)	37
3.2.2 Conditional process variance	41
3.2.3 Estimation error for single accident years	44
3.2.4 Conditional MSEP, aggregated accident years	55
3.3 Bounds in the unconditional approach	58
3.3.1 Results and interpretation	58
3.3.2 Aggregation of accident years	63
3.3.3 Proof of Theorems 3.17, 3.18 and 3.20	64
3.4 Analysis of error terms in the CL method	70
3.4.1 Classical CL model	70
3.4.2 Enhanced CL model	71
3.4.3 Interpretation	72

3.4.4	CL estimator in the enhanced model	73
3.4.5	Conditional process and parameter prediction errors	74
3.4.6	CL factors and parameter estimation error	75
3.4.7	Parameter estimation	81
<b>4</b>	<b>Bayesian Models</b>	<b>91</b>
4.1	Benktander–Hovinen method and Cape–Cod model	91
4.1.1	Benktander–Hovinen method	92
4.1.2	Cape–Cod model	95
4.2	Credible claims reserving methods	98
4.2.1	Minimizing quadratic loss functions	98
4.2.2	Distributional examples to credible claims reserving	101
4.2.3	Log-normal/Log-normal model	105
4.3	Exact Bayesian models	113
4.3.1	Overdispersed Poisson model with gamma prior distribution	114
4.3.2	Exponential dispersion family with its associated conjugates	122
4.4	Markov chain Monte Carlo methods	131
4.5	Bühlmann–Straub credibility model	145
4.6	Multidimensional credibility models	154
4.6.1	Hachemeister regression model	155
4.6.2	Other credibility models	159
4.7	Kalman filter	160
<b>5</b>	<b>Distributional Models</b>	<b>167</b>
5.1	Log-normal model for cumulative claims	167
5.1.1	Known variances $\sigma_j^2$	170
5.1.2	Unknown variances	177
5.2	Incremental claims	182
5.2.1	(Overdispersed) Poisson model	182
5.2.2	Negative-Binomial model	183
5.2.3	Log-normal model for incremental claims	185
5.2.4	Gamma model	186
5.2.5	Tweedie's compound Poisson model	188
5.2.6	Wright's model	199
<b>6</b>	<b>Generalized Linear Models</b>	<b>201</b>
6.1	Maximum likelihood estimators	201
6.2	Generalized linear models framework	203
6.3	Exponential dispersion family	205
6.4	Parameter estimation in the EDF	208
6.4.1	MLE for the EDF	208
6.4.2	Fisher's scoring method	210
6.4.3	Mean square error of prediction	214
6.5	Other GLM models	223
6.6	Bornhuetter–Ferguson method, revisited	223
6.6.1	MSEP in the BF method, single accident year	226
6.6.2	MSEP in the BF method, aggregated accident years	230

---

<b>7</b>	<b>Bootstrap Methods</b>	<b>233</b>
7.1	Introduction	233
7.1.1	Efron's non-parametric bootstrap	234
7.1.2	Parametric bootstrap	236
7.2	Log-normal model for cumulative sizes	237
7.3	Generalized linear models	242
7.4	Chain-ladder method	244
7.4.1	Approach 1: Unconditional estimation error	246
7.4.2	Approach 3: Conditional estimation error	247
7.5	Mathematical thoughts about bootstrapping methods	248
7.6	Synchronous bootstrapping of seemingly unrelated regressions	253
<b>8</b>	<b>Multivariate Reserving Methods</b>	<b>257</b>
8.1	General multivariate framework	257
8.2	Multivariate chain-ladder method	259
8.2.1	Multivariate CL model	259
8.2.2	Conditional process variance	264
8.2.3	Conditional estimation error for single accident years	265
8.2.4	Conditional MSEP, aggregated accident years	272
8.2.5	Parameter estimation	274
8.3	Multivariate additive loss reserving method	288
8.3.1	Multivariate additive loss reserving model	288
8.3.2	Conditional process variance	295
8.3.3	Conditional estimation error for single accident years	295
8.3.4	Conditional MSEP, aggregated accident years	297
8.3.5	Parameter estimation	299
8.4	Combined Multivariate CL and ALR method	308
8.4.1	Combined CL and ALR method: the model	308
8.4.2	Conditional cross process variance	313
8.4.3	Conditional cross estimation error for single accident years	315
8.4.4	Conditional MSEP, aggregated accident years	319
8.4.5	Parameter estimation	321
<b>9</b>	<b>Selected Topics I: Chain-Ladder Methods</b>	<b>331</b>
9.1	Munich chain-ladder	331
9.1.1	The Munich chain-ladder model	333
9.1.2	Credibility approach to the MCL method	335
9.1.3	MCL Parameter estimation	340
9.2	CL Reserving: A Bayesian inference model	346
9.2.1	Prediction of the ultimate claim	351
9.2.2	Likelihood function and posterior distribution	351
9.2.3	Mean square error of prediction	354
9.2.4	Credibility chain-ladder	359
9.2.5	Examples	361
9.2.6	Markov chain Monte Carlo methods	364

---

<b>10</b>	<b>Selected Topics II: Individual Claims Development Processes</b>	<b>369</b>
10.1	Modelling claims development processes for individual claims	369
10.1.1	Modelling framework	370
10.1.2	Claims reserving categories	376
10.2	Separating IBNeR and IBNyR claims	379
<b>11</b>	<b>Statistical Diagnostics</b>	<b>391</b>
11.1	Testing age-to-age factors	391
11.1.1	Model choice	394
11.1.2	Age-to-age factors	396
11.1.3	Homogeneity in time and distributional assumptions	398
11.1.4	Correlations	399
11.1.5	Diagonal effects	401
11.2	Non-parametric smoothing	401
<b>Appendix A:</b>	<b>Distributions</b>	<b>405</b>
A.1	Discrete distributions	405
A.1.1	Binomial distribution	405
A.1.2	Poisson distribution	405
A.1.3	Negative-Binomial distribution	405
A.2	Continuous distributions	406
A.2.1	Uniform distribution	406
A.2.2	Normal distribution	406
A.2.3	Log-normal distribution	407
A.2.4	Gamma distribution	407
A.2.5	Beta distribution	408
