

Contents

1	Introduction	3
1.1	Why We Need Stress Testing	3
1.2	Plan of the Book	8
1.3	Suggestions for Further Reading	9
I	Data, Models and Reality	11
2	Risk and Uncertainty – or, Why Stress Testing is <i>Not</i> Enough	13
2.1	The Limits of Quantitative Risk Analysis	13
2.2	Risk or Uncertainty?	14
2.3	Suggested Reading	17
3	The Role of Models in Risk Management and Stress Testing	19
3.1	How Did We Get Here?	20
3.2	Statement of the Two Theses of This Chapter	21
3.3	Defense of the First Thesis (Centrality of Models)	22
3.3.1	Models as Indispensable Interpretative Tools	23
3.3.2	The Plurality-of-Models View	26
3.4	Defense of the Second Thesis (Co-ordination)	29
3.4.1	Traders as Agents	29
3.4.2	Agency Brings About Coordination	31
3.4.3	From Coordination to Positive Feedback	32
3.5	The Role of Stress and Scenario Analysis	33
3.6	Suggestions for Further Reading	36
4	What Kind of Probability Do We Need in Risk Management?	39
4.1	Frequentist versus Subjective Probability	39
4.2	Tail Co-dependence	45
4.3	From Structural Models to Co-Dependence	48
4.4	Association or Causation?	49
4.5	Suggestions for Further Reading	52

II	The Probabilistic Tools and Concepts	55
5	Probability with Boolean Variables I: Marginal and Conditional Probabilities	57
5.1	The Set-Up and What We Are Trying to Achieve	57
5.2	(Marginal) Probabilities	60
5.3	Deterministic Causal Relationship	62
5.4	Conditional Probabilities	64
5.5	Time Ordering and Causation	65
5.6	An Important Consequence: Bayes' Theorem	66
5.7	Independence	67
5.8	Two Worked-Out Examples	68
5.8.1	Dangerous Running	68
5.8.2	Rare and Even More Dangerous Diseases	69
5.9	Marginal and Conditional Probabilities: A Very Important Link .	71
5.10	Interpreting and Generalizing the Factors x_i^k	74
5.11	Conditional Probability Maps	76
6	Probability with Boolean Variables II: Joint Probabilities	79
6.1	Conditioning on More Than One Event	80
6.2	Joint Probabilities	81
6.3	A Remark on Notation	83
6.4	From the Joint to the Marginal and the Conditional Probabilities	84
6.5	From the Joint Distribution to Event Correlation	85
6.6	From the Conditional and Marginal to the Joint Probabilities? .	90
6.7	Putting Independence To Work	91
6.8	Conditional Independence	94
6.9	Obtaining Joint Probabilities with Conditional Independence . .	96
6.10	At a Glance	97
6.11	Summary	97
6.12	Suggestions for Further Reading	98
7	Creating Probability Bounds	99
7.1	The Lay of the Land	99
7.2	Bounds on Joint Probabilities	100
7.3	How Tight Are These Bounds in Practice?	102
8	Bayesian Nets I: An Introduction	107
8.1	Bayesian Nets: An Informal Definition	107
8.2	Defining the Structure of Bayesian Nets	109
8.3	More About Conditional Independence	112
8.4	What Goes in the Conditional Probability Tables?	114
8.5	Useful Relationships	115
8.6	A Worked-Out Example	117
8.7	A Systematic Approach	118
8.8	What Can We Do with Bayesian Nets?	120

8.8.1	Unravelling the Causal Structure	120
8.8.2	Estimating the Joint Probabilities	122
8.9	Suggestions for Further Reading	122
9	Bayesian Nets II: Constructing Probability Tables	125
9.1	Statement of the Problem	125
9.2	Marginal Probabilities – First Approach	126
9.2.1	Starting from a Fixed Probability	127
9.2.2	Starting from a Fixed Magnitude of the Move	128
9.3	Marginal Probabilities – Second Approach	129
9.4	Handling Events of Different Probability	131
9.5	Conditional Probabilities: A Reasonable Starting Point	131
9.6	Conditional Probabilities: Checks and Constraints	133
9.6.1	Necessary Conditions	134
9.6.2	Triplet Conditions	135
9.6.3	Independence	135
9.6.4	Deterministic Causation	136
9.6.5	Incompatibility of Events	136
9.7	Internal Compatibility of Conditional Probabilities: The Need for a Systematic Approach.	137
III	Applications	139
10	Obtaining a Coherent Solution I: Linear Programming	141
10.1	Plan of the Work Ahead	141
10.2	Coherent Solution with Conditional Probabilities Only	144
10.3	The Methodology in Practice: First Pass	149
10.4	The CPU Cost of the Approach	152
10.5	Illustration of the Linear Programming Technique	152
10.6	What Can We Do with This Information?	157
10.6.1	Extracting Information With Conditional Probabilities Only	157
10.6.2	Extracting Information With Conditional and Margial Prob- abilities	159
11	Obtaining a Coherent Solution II: Bayesian Nets	161
11.1	Solution with Marginal and n -Conditioned Probabilities	162
11.1.1	Generalizing the Results	169
11.2	An ‘Automatic’ Prescription to Build Joint Probabilities	171
11.3	What Can We Do with This Information?	173
11.3.1	Risk-Adjusting Returns	174

IV Making It Work In Practice	177
12 Overcoming Our Cognitive Biases	179
12.1 Cognitive Shortcomings and Bounded Rationality	180
12.1.1 How Pervasive Are Cognitive Shortcomings?	181
12.1.2 The Social Context	181
12.1.3 Adaptiveness	183
12.2 Representativeness	185
12.3 Quantification of the Representativeness Bias	188
12.4 Causal/Diagnostic and Positive/Negative Biases	189
12.5 Conclusions	192
12.6 Suggestions for Further Reading	193
13 Selecting and Combining Stress Scenarios	195
13.1 Bottom Up or Top Down?	195
13.2 Relative Strengths and Weaknesses of the Two Approaches	196
13.3 Possible Approaches to a Top-Down Analysis	198
13.4 Sanity Checks	199
13.5 How to Combine Stresses – Handling the Dimensionality Curse	201
13.6 Combining the Macro and Bottom-Up Approaches	203
14 Governance	207
14.1 The Institutional Aspects of Stress Testing	207
14.1.1 Transparency and Ease of Use	207
14.1.2 Challenge by Non-Specialists	208
14.1.3 Checks for Completeness	208
14.1.4 Interactions among Different Specialist	210
14.1.5 Auditability of the Process and of the Results	211
14.2 Lines of Criticism	212
14.2.1 The Role of Subjective Inputs	212
14.2.2 The Complexity of the Stress-Testing Process	214
15 Appendix I: A Simple Introduction to Linear Programming	217
15.1 Plan of the Appendix	217
15.2 Linear Programming - A Refresher	217
15.3 The Simplex Method	219
