Preface	xi 16
	17
Acknowledgements	xiii 18
	19
PART I: INTRODUCTION	20
	21
1 An Introduction to Credit Risk	3 22
1.1 Credit Risk	3 23
1.1.1 Historical and Risk-Neutral Probabilities	4 24
1.1.2 Bond Prices and Default Probability	6 25
1.2 Credit Risk Modelling	8 26
1.3 Credit Derivatives	11 27
1.4 Modelling Assumptions	13 28
1.4.1 Probability Space and Filtrations	13 29
1.4.2 The Risk-Free Asset	15 30
	31
2 An Introduction to Lévy Processes	17 32
	33
2.1 Brownian Motion	17 34
2.2 Lévy Processes	20 35
2.3 Examples of Lévy Processes	23 36
2.3.1 Poisson Process	23 37
2.3.2 Compound Poisson Process	25 38
2.3.3 The Gamma Process	27 39
2.3.4 Inverse Gaussian Process	29 40
2.3.5 The CMY Process	31 41
2.3.6 The Variance Gamma Process	32 42
2.4 Ornstein–Uhlenbeck Processes	37 43
2.4.1 The Gamma-OU Process	39 44
2.4.2 The Inverse Gaussian-OU Process	40 45

PART II: SINGLE-NAME MODELLING	1
3 Single-Name Credit Derivatives	45
3.1 Credit Default Swaps	45
3.1.1 Credit Default Swaps Pricing	47
3.1.2 Calibration Assumptions	49
3.2 Credit Default Swap Forwards	50
3.2.1 Credit Default Swap Forward Pricing	50
3.3 Constant Maturity Credit Default Swaps	51
3.3.1 Constant Maturity Credit Default Swaps Pricing	52
3.4 Options on CDS	54
4 Firm-Value Lévy Models	57
4.1 The Merton Model	57
4.2 The Black–Cox Model with Constant Barrier	60
4.3 The Lévy First-Passage Model	62
4.4 The Variance Gamma Model	63
4.4.1 Sensitivity to the Parameters	66
4.4.2 Calibration on CDS Term Structure Curve	69
4.5 One-Sided Lévy Default Model	71
4.5.1 Wiener–Hopf Factorization and Default Probabilities	71
4.5.2 Illustration of the Pricing of Credit Default Swaps	75
4.6 Dynamic Spread Generator	77
4.6.1 Generating Spread Paths	77
4.6.2 Pricing of Options on CDSs	80
4.6.3 Black’s Formulas and Implied Volatility	81
Appendix: Solution of the PDIE	83
5 Intensity Lévy Models	87
5.1 Intensity Models for Credit Risk	87
5.1.1 Jarrow–Turnbull Model	87
5.1.2 Cox Models	91
5.2 The Intensity-OU Model	92
5.3 Calibration of the Model on CDS Term Structures	94
PART III: MULTIVARIATE MODELLING	36
6 Multivariate Credit Products	101
6.1 CDOs	101
6.2 Credit Indices	105
7 Collateralized Debt Obligations	109
7.1 Introduction	109
7.2 The Gaussian One-Factor Model	110

Contents	ix
7.3 Generic One-Factor Lévy Model	111 1
7.4 Examples of Lévy Models	115 2
7.5 Lévy Base Correlation	117 3
7.5.1 The Concept of Base Correlation	117 4
7.5.2 Pricing Non-Standard Tranches	119 5
7.5.3 Correlation Mapping for Bespoke CDOs	121 6
7.6 Delta-Hedging CDO tranches	122 7
7.6.1 Hedging with the CDS Index	122 8
7.6.2 Delta-Hedging with a Single-Name CDS	122 9
7.6.3 Mezz-Equity hedging	124 10
	11
8 Multivariate Index Modelling	125 12
	13
8.1 Black's Model	125 14
8.2 VG Credit Spread Model	127 15
8.3 Pricing Swaptions using FFT	128 16
8.4 Multivariate VG Model	130 17
	18
PART IV: EXOTIC STRUCTURED CREDIT RISK PRODUCTS	19
9 Credit CPPIs and CPDOs	137 20
9.1 Introduction	137 21
9.2 CPPIs	137 22
9.3 Gap Risk	143 23
9.4 CPDOs	145 24
	25
10 Asset-Backed Securities	149 26
10.1 Introduction	149 27
10.2 Default Models	150 28
10.2.1 Generalized Logistic Default Model	150 29
10.2.2 Lévy Portfolio Default Model	152 30
10.2.3 Normal One-Factor Default Model	153 31
10.2.4 Generic One-Factor Lévy Default Model	155 32
10.3 Prepayment Models	156 33
10.3.1 Constant Prepayment Model	157 34
10.3.2 Lévy Portfolio Prepayment Model	157 35
10.3.3 Normal One-Factor Prepayment Model	158 36
10.4 Numerical Results	158 37
	160 38
Bibliography	167 39
