Preface	xiii
Acknowledgements	xvii
Abbreviations	xix
Notation	xxiii
1 Introduction	1
1.1 Market consistency	1
1.2 The primacy of the ‘market’	2
1.3 Calibrating to the ‘market’	3
1.4 Structure of the book	3
1.5 Terminology	5
2 When is and when isn’t Market Consistency Appropriate?	9
2.1 Introduction	9
2.2 Drawing lessons from the characteristics of money itself	9
2.2.1 The concept of ‘value’	9
2.2.2 The time value of money	10
2.2.3 Axioms of additivity, scalability and uniqueness	11
2.2.4 Market consistent valuations	13
2.2.5 Should financial practitioners always use market consistent valuations?	14
2.2.6 Equity between parties	15
2.2.7 Embedded values and franchise values	16
2.2.8 Solvency calculations	17
2.2.9 Pension fund valuations	19
2.2.10 Bid–offer spreads	19
2.3 Regulatory drivers favouring market consistent valuations	20
2.4 Underlying theoretical attractions of market consistent valuations	22
2.5 Reasons why some people reject market consistency	23
2.6 Market making versus position taking	24

2.7	Contracts that include discretionary elements	25
2.8	Valuation and regulation	25
2.9	Marking-to-market versus marking-to-model	28
2.10	Rational behaviour?	30
3	Different Meanings given to ‘Market Consistent Valuations’	33
3.1	Introduction	33
3.2	The underlying purpose of a valuation	33
3.3	The importance of the ‘marginal’ trade	33
3.4	Different definitions used by different standards setters	35
3.4.1	Introduction	35
3.4.2	US accounting – FAS 157	35
3.4.3	Guidance on how to interpret FAS, IAS, IFRS, etc.	36
3.4.4	EU insurance regulation – ‘Solvency II’	37
3.4.5	Market consistent embedded values	42
3.4.6	UK pension fund accounting and solvency computation	42
3.5	Interpretations used by other commentators	43
3.5.1	Introduction	43
3.5.2	Contrasting ‘market consistent’ values with ‘real world’ values	43
3.5.3	Stressing the aim of avoiding subjectivity where possible	46
3.5.4	Extending ‘market consistency’ to other activities	47
3.5.5	Application only if obvious market observables exist	47
3.5.6	Hedgeable liabilities	48
3.5.7	Fair valuation in an asset management context	49
4	Derivative Pricing Theory	51
4.1	Introduction	51
4.2	The principle of no arbitrage	52
4.2.1	No arbitrage	52
4.2.2	Valuation of symmetric derivatives	56
4.2.3	Valuation of asymmetric derivatives	61
4.2.4	Valuation of path dependent derivatives	63
4.3	Lattices, martingales and \hat{I} to calculus	64
4.3.1	Lattice valuation approaches	64
4.3.2	Stochastic (\hat{I} to) calculus	70
4.3.3	The martingale formulation	75
4.3.4	Hedging	76
4.3.5	Path dependent derivatives	80
4.4	Calibration of pricing algorithms	81
4.4.1	Market conventions versus underlying market beliefs	81
4.4.2	Why calculate market implied parameters such as implied volatility?	83
4.4.3	The volatility smile or skew	84
4.5	Jumps, stochastic volatility and market frictions	85
4.5.1	Mileage options	85
4.5.2	Jump processes	86
4.5.3	Stochastic volatility	88

4.5.4	Non-zero dealing costs	89
4.5.5	Interpretation in the context of Modern Portfolio Theory	90
4.6	Equity, commodity and currency derivatives	91
4.7	Interest rate derivatives	92
4.8	Credit derivatives	93
4.9	Volatility derivatives	95
4.10	Hybrid instruments	96
4.11	Monte Carlo techniques	97
4.12	Weighted Monte Carlo and analytical analogues	98
4.12.1	Weighted Monte Carlo	98
4.12.2	Analytical weighted Monte Carlo	99
4.13	Further comments on calibration	101
5	The Risk-free Rate	103
5.1	Introduction	103
5.2	What do we mean by 'risk-free'?	103
5.3	Choosing between possible meanings of 'risk-free'	115
5.3.1	Real world or market consistent?	115
5.3.2	Choice between different reference rates	115
5.3.3	How risk-free is government debt?	120
5.3.4	Impact of choice of reference rate	124
6	Liquidity Theory	127
6.1	Introduction	127
6.2	Market experience	127
6.3	Lessons to draw from market experience	130
6.3.1	Consideration of 'extreme' events	130
6.3.2	Or maybe not such extreme events?	131
6.3.3	Contagion	132
6.4	General principles	133
6.5	Exactly what is liquidity?	134
6.5.1	Different points of view	134
6.5.2	Funding versus market liquidity	136
6.5.3	The impact of these different points of view	137
6.5.4	Modelling liquidity premia on different instruments	138
6.6	Liquidity of pooled funds	139
6.7	Losing control	141
7	Risk Measurement Theory	145
7.1	Introduction	145
7.2	Instrument-specific risk measures	145
7.3	Portfolio risk measures	148
7.3.1	Introduction	148
7.3.2	Ex-post (i.e. historic, backward-looking, retrospective) risk measures	150
7.3.3	Ex-ante (i.e. forward-looking, prospective) risk measures	153

7.4	Time series-based risk models	157
7.4.1	Risk 'models' versus risk 'systems'	157
7.4.2	Mathematical characterisation of different types of risk model	157
7.4.3	Intrinsic ways of estimating risk models from past data	158
7.4.4	Matrix analysis	159
7.4.5	The link back to pricing algorithms	161
7.4.6	Choice of underlying distributional form	161
7.4.7	Monte Carlo methods	164
7.4.8	Summary	164
7.5	Inherent data limitations applicable to time series-based risk models	164
7.5.1	The sparsity of the data available	164
7.5.2	Idiosyncratic risk	166
7.6	Credit risk modelling	167
7.6.1	Introduction	167
7.6.2	Credit ratings	168
7.6.3	Market consistency	170
7.6.4	Collateralised debt obligations (CDOs)	170
7.6.5	An accident waiting to happen?	175
7.6.6	Conduits and structured investment vehicles (SIVs)	176
7.7	Risk attribution	176
7.7.1	Intrinsic rationale	176
7.7.2	Traditional (covariance-based) risk attribution	177
7.7.3	Risk attribution applied to other types of risk measure	178
7.7.4	'Stand-alone' risk statistics	178
7.8	Stress testing	179
7.8.1	Introduction	179
7.8.2	Different interpretations	180
7.8.3	Further comments	183
8	Capital Adequacy	185
8.1	Introduction	185
8.2	Financial stability	186
8.3	Banking	189
8.3.1	The Basel Accords	189
8.3.2	Market risk	190
8.3.3	Credit risk	192
8.3.4	Operational risk	193
8.4	Insurance	194
8.4.1	Solvency II	194
8.4.2	Underlying approach	195
8.4.3	Best estimate calculations	195
8.4.4	Surrender rates	197
8.4.5	UK regulatory capital computations for insurers	198
8.4.6	Categorising risks	200
8.5	Pension funds	200
8.6	Different types of capital	202

9	Calibrating Risk Statistics to Perceived ‘Real World’ Distributions	205
9.1	Introduction	205
9.2	Referring to market values	207
9.3	Backtesting	209
9.3.1	Introduction	209
9.3.2	In-sample versus out-of-sample backtesting	210
9.3.3	Testing backtest quality statistically	211
9.3.4	Intra-period position movements	213
9.3.5	Calibration of credit default models	213
9.4	Fitting observed distributional forms	213
9.5	Fat-tailed behaviour in individual return series	215
9.5.1	Identifying the true underlying return series	215
9.5.2	Fat tails	215
9.5.3	Skew, kurtosis and the (fourth-moment) Cornish-Fisher approach	220
9.5.4	Weaknesses of the Cornish-Fisher approach	221
9.5.5	Improving on the Cornish-Fisher approach	223
9.5.6	Time-varying volatility	224
9.5.7	Crowded trades	226
9.5.8	Bounded rationality	227
9.6	Fat-tailed behaviour in multiple return series	227
9.6.1	Introduction	227
9.6.2	Visualising fat tails in multiple return series	228
9.6.3	Copulas, Sklar’s theorem and quantiles	230
9.6.4	Fractile–fractile (i.e. quantile–quantile box) plots	233
9.6.5	Time-varying volatility	236
9.6.6	Differentiating between return series	238
10	Calibrating Risk Statistics to ‘Market Implied’ Distributions	241
10.1	Introduction	241
10.2	Market implied risk modelling	241
10.2.1	Refining the granularity-based approach to risk modelling	241
10.2.2	Time horizons	243
10.2.3	Additivity, scalability and coherence	245
10.3	Fully market consistent risk measurement in practice	246
10.3.1	Comparison with current risk management practices	246
10.3.2	The CDO analogy	247
11	Avoiding Undue Pro-cyclicality in Regulatory Frameworks	251
11.1	Introduction	251
11.2	The 2007–09 credit crisis	251
11.3	Underwriting of failures	255
11.4	Possible pro-cyclicality in regulatory frameworks	256
11.5	Re-expressing capital adequacy in a market consistent framework	259
11.6	Discount rates	260
11.7	Pro-cyclicality in Solvency II	261
11.8	Incentive arrangements	263

11.9	Systemic impacts of pension fund valuations	264
11.10	Sovereign default risk	264
12	Portfolio Construction	267
12.1	Introduction	267
12.2	Risk–return optimisation	267
12.2.1	Introduction	267
12.2.2	The basic mathematics of risk–return optimisation	268
12.2.3	Mean–variance optimisation	268
12.2.4	Constraint-less mean–variance optimisation	270
12.2.5	Alpha–beta separation	270
12.2.6	Multi-period mean–variance optimisation	271
12.3	Other portfolio construction styles	271
12.4	Risk budgeting	272
12.4.1	Introduction	272
12.4.2	Information ratios	273
12.4.3	Sensitivity to the input assumptions	275
12.4.4	Sensitivity to the universe from which ideas are drawn	276
12.5	Reverse optimisation and implied view analysis	276
12.5.1	Implied alphas	276
12.5.2	Consistent implementation of investment ideas across portfolios	277
12.6	Calibrating portfolio construction techniques to the market	277
12.7	Catering better for non-normality in return distributions	278
12.7.1	Re-normalising historic return distributions	278
12.7.2	Using co-skew, co-kurtosis and other co-moments	279
12.8	Robust optimisation	280
12.8.1	Black-Litterman	280
12.8.2	Re-sampling	281
12.9	Taking due account of other investors’ risk preferences	281
13	Calibrating Valuations to the Market	283
13.1	Introduction	283
13.2	Price formation and price discovery	283
13.2.1	The price formation process	283
13.2.2	Price discovery	285
13.3	Market consistent asset valuations	287
13.3.1	Introduction	287
13.3.2	Relatively simple assets independent of the firm	287
13.3.3	More complex assets independent of the firm	289
13.3.4	Assets that include risk exposures linked to the firm	291
13.3.5	Further comments	291
13.4	Market consistent liability valuations	296
13.4.1	Introduction	296
13.4.2	Sure promises from infinitely well-capitalised entities	296
13.4.3	Uncertain promises from finitely capitalised entities	298
13.4.4	The solvency put option	299

13.4.5	Bid and offer prices	299
13.4.6	Annuities	300
13.4.7	Unit-linked life insurance	301
13.4.8	With-profits (i.e. participating) business	302
13.4.9	Other non-profit non-linked life insurance	303
13.4.10	Non-life (i.e. property/casualty) insurance	304
13.4.11	Bank deposits	305
13.5	Market consistent embedded values	305
13.6	Solvency add-ons	307
13.6.1	Introduction	307
13.6.2	Current methodologies	307
13.6.3	Full market consistency	308
13.6.4	Correlations	308
13.6.5	Equity market and yield curve movements (market risk)	309
13.6.6	Credit risk	309
13.6.7	Liquidity risk	310
13.6.8	Bid-offer spreads	310
13.6.9	Expense risk	311
13.6.10	Systemic mortality and longevity risks (insurance risk)	311
13.6.11	Other demographic risks	311
13.6.12	Operational risk	311
13.6.13	Non-life (i.e. property/casualty) insurance risk	312
13.7	Defined benefit pension liabilities	313
13.7.1	Introduction	313
13.7.2	Solvency valuations	313
13.7.3	Ongoing valuations	314
13.7.4	Transfer values	315
13.8	Unit pricing	316
14	The Final Word	317
14.1	Conclusions	317
14.2	Market consistent principles	317
	Bibliography	325
	Index	331
