1 Introduction	1
PART I FUNDAMENTALS FOR STYLE AND IMPLICIT VALUE-AT-RISK	7
2 Ongoing Institutionalization	9
2.1 Hedge Fund Industry Size and Asset Flows	11
2.2 Style Distribution	13
2.3 2006–2007 Structural Developments	14
2.3.1 Geography, Listing, Independent Arbitrators and Back Office	14
2.3.2 Pricing and Side Pockets	15
2.4 Are Hedge Funds Becoming Decent?	17
2.4.1 Improved Market Efficiency	17
2.4.2 Transfer of Risk	19
2.4.3 Liquidity Suppliers	20
2.4.4 Captive Capital?	21
2.4.5 The Black Sheep of Capitalism?	22
2.5 Funds of Hedge Funds Persistence	23
2.5.1 Conditional Persistence	24
2.5.2 Interquartile Spreads	28
3 Heterogeneity of Hedge Funds	31
3.1 Testing Sample	32
3.2 Smoothing Effect of a Restrictive Classification	33

3.3	Heterogeneity Revealed through Modern Cluster Analysis	36
3.3.1	Modern Cluster Analysis Measures of a Classification	37
3.3.2	Empirical Comparison	39
3.3.3	Consequence For Value-at-Risk	40
3.4	Appendix A: Indices Sample	41
4	Active and Passive Hedge Fund Indices	45
4.1	Illusions Fostered by Active Hedge Fund Indices	48
4.1.1	The Illusion of Achieving Purity	48
4.1.2	The Illusion of Representativeness	49
4.1.3	The Illusion of Optimality	54
4.2	Passive Indices and the Illusion of being Clones	56
4.2.1	Mechanical Replication	56
4.2.2	Exposure Replication	59
4.2.3	Replication of Distributions	63
4.3	Conclusion	64
5	The Four Dimensions of Risk Management for Hedge Funds	69
5.1	Operational and Structural risk	71
5.1.1	Sources of Structural Risk	72
5.2	Risk Control	75
5.3	Delegation Risk	75
5.3.1	Market Risk	75
5.3.2	Risk Controls	76
5.4	Direct Investment Risk	78
5.4.1	Underlying Approach	79
5.4.2	Strategy Risk Approach	81
5.4.3	Overlapping Approaches	83
5.5	Conclusion	84
5.6	Appendix B: Risks Embedded with Some Classical Alternative Strategies	85
5.6.1	Pure Short Selling	85
5.6.2	Long/Short Equity	86
5.6.3	Convertible Arbitrage	88
5.6.4	Fixed Income Arbitrage	89
5.6.5	Risk Arbitrage	90

5.7	Appendix C: Other Common Hedge Funds Risks	92
5.7.1	Leverage Risk	92
5.7.2	Liquidity Risk	92
5.7.3	Counter-Party Risk	93
5.7.4	Specific Event Risk	93
PART II	STYLE VALUE-AT-RISK	97
6	The Original Style VaR Revisited	99
6.1	The Multi-Index Model	100
6.1.1	The Sharpe (1988) Model	100
6.1.2	Application to Hedge Funds	101
6.1.3	Hedge Funds Indices as Risk Factors	102
6.2	The Style Value-at-Risk	103
6.2.1	The Value-at-Risk Model	103
6.2.2	Original Backtesting	104
6.3	Backtesting Revisited	105
6.3.1	Fundamentals of an Updated Backtesting	105
6.3.2	Updated Exception Rate	109
6.3.3	Sources of Risk Underestimation	112
7	The New Style Model	119
7.1	Extreme Value Theory	120
7.1.1	The Generalized Pareto Distribution	120
7.1.2	Parameter Estimation	122
7.1.3	Method Selection	125
7.1.4	Extreme Quantiles to Value the Risk	127
7.1.5	Assessing the Risk of Hedge Funds	128
7.1.6	Dealing with Autocorrelation	131
7.2	Risk Consolidation	136
7.2.1	Hybrid EVT Approach	137
7.2.2	Tail Dependence	138
7.2.3	Location Parameters	142
7.2.4	Extreme Value-at-Idiosyncratic-Risk	145
7.3	The New Style Model	145
7.3.1	The Model	145
7.3.2	Backtesting	147
7.4	Appendix D: Algorithms for the Elemental Percentile Method	150
7.5	Appendix E: Copulas	151

8 Annualization Problem	155
8.1 Annualization of the Main Statistical Indicators	
Assuming i.i.d.	157
8.1.1 Annualization of the Mean	157
8.1.2 Annualization of Volatility	158
8.1.3 Annualization of Skewness	158
8.1.4 Annualization of the Kurtosis Coefficient	159
8.1.5 Annualization of Coefficients above the Fourth Order of Magnitude	160
8.1.6 Application to Finance	160
8.2 Annualization of Value-at-Risk Assuming i.i.d.	161
8.2.1 Annualization of Normal Value-at-Risk	162
8.2.2 Annualization of Value-at-Risk for Leptokurtic Distributions	164
8.2.3 Annualization of Cornish–Fisher Value-at-Risk	167
8.2.4 Annualization of Value-at-Risk Based on Historical Percentiles	169
8.3 Annualization Without Assuming i.i.d.	171
8.3.1 Annualization of Extreme Value Theory Value-at-Risk	171
8.3.2 Annualization of <i>GARCH</i> Value-at-Risk	172
8.4 Applications to the Style Value-at-Risk	174
8.5 Appendix F: Annualization of Excess Kurtosis	176
8.6 Appendix G: Drost and Nijman Theorem	177
PART III IMPLICIT VALUE-AT-RISK	179
9 The Best Choice Implicit Value-at-Risk	181
9.1 Alternative Style Analysis and BCI Model	182
9.2 Theoretical Framework of BCIM	186
9.2.1 Implicit Factors	187
9.2.2 Coefficient of Determination and Independent Variables	190
9.2.3 Automatic Selection of the Best Choice Implicit Model	192
9.3 Best Choice Implicit VaR	193
9.4 Empirical Tests	195
9.4.1 Quality of the BCI Model	196

9.4.2	Backtesting	197
9.4.3	Steadiness	198
10	BCI Model and Hedge Fund Clones	199
10.1	The Ten-Factor Model	199
10.2	The Non-Linear Model	202
11	Risk Budgeting	207
11.1	Value-at-Risk of a Multi-Managers Portfolio	208
11.1.1	Style Model	208
11.1.2	Best Choice Implicit Model	210
11.2	Risk Decomposition: 'Before and After' Attribution	211
11.3	Risk Decomposition: Closed form Attribution	212
11.3.1	New Style Attribution	213
11.3.2	BCIM Attribution	213
12	Value-at-Risk Monitoring	215
12.1	Analysing Graveyards and Hedge Funds Demise	215
12.2	The Probit Model	216
12.3	Empirical Evidence	218
12.3.1	Return and Volatility	218
12.3.2	Value-at-Risk	220
12.4	Implications for Portfolio Management	221
13	Beyond Value-at-Risk	223
13.1	2007–2008 Liquidity Crisis and Hedge Funds	224
13.2	Mechanical Stress Test	225
13.3	Liquidity-Adjusted Value-at-Risk	226
13.3.1	Non-Myopic Risk Measures	227
13.3.2	Liquidity Adjustment Based on Replication	229
13.4	Limit of Liquidity-Adjusted Value-at-Risk and Liquidity Scenario	230
	Bibliography	233
	Index	239
