# Index

- Acquisitions initiatives/leads:
  - data warehouse (DW) information, 79–89
    - decision diagram for, 69
    - dynamic perspective on, 105–106
    - improving lead information for, 140–141
    - overview, 67–70
    - questionnaires, 89–101
    - questions for determining direction, 70–71
    - reasons to focus on, 28, 30–31, 68–69
    - segment prioritization table, 75
    - target group determination, 71–75
    - target group profiling, 76–78
    - using decision trees, 78–79
    - workshops, 101–105
- Ad hoc campaigns and mass communication, 208
- Agility, 13–14
- Algorithms:
  - CHAID algorithm, 76, 220
  - Cluster analysis, 79–85, 93–95, 136–137
  - decision trees (*see* Decision trees)
  - pattern detection algorithm, 129–131
  - selection of, 123–126, 154–155, 160–162
- Analytical competencies, 6–7
- Answering the Ultimate Question* (Owen/Brooks), 174
- Base churn, 149
- Base tables:
  - in customer retention, 152–154
  - identifying replacement offers using, 128–129
  - and value-based segmentation, 86–87
- Basket analysis, 137–139
- Best practices, 5, 49–50
- Bundled offers, 110, 135–139
- Business analytics (BA), defined, 1–2
- Business case approach to campaign assessment, 112–116
- Business intelligence (BI), defined, 1–2
- Business requirements, 6
- Business rules, adding to value-based segmentation, 26–28
- Call centers, 10, 65–66
- Campaign codes, 188
- Campaign performance tracking. *See also* Lag information
  - on continuous campaigns, 187–192
  - customer-level, 195–198
  - on time-limited campaigns, 194–195

- Campaigns. *See also* Acquisitions
  - initiatives/leads; Customer retention; Existing customer leads
  - costs, 114
  - increased earnings, 114–115
  - model selection, 166–168
  - multiple campaigning, 161–165
  - net present value (NPV), 116
  - performance tracking (*see* Campaign performance tracking)
  - resource allocations, 115
  - return on investment (ROI), 116
  - single campaigning, 165–169
- CHAID algorithm, 76, 220
- Change management, 6, 54–59, 101–105
- Churn, 33, 38, 39
  - base, 149
  - caused by external factors, 149
  - churn prediction tree, 220
  - customer-initiated vs. company-initiated, 216–218
  - data flow setup, 154–155
  - defining, 150
  - exploring types and reasons, 151–152
  - fraudulent, 149
  - happy, 148, 212–225
  - types of, 148–149
  - unhappy, 149, 226–230
  - warning systems, 169–170
- Churn definition, 151
- Churn drivers, 175–176
- Churn prediction, 165, 171–172, 175
  - data setup, 155–156
  - elements for, 149–155
- Churn window, 151
- Cluster analysis, 79–85
  - based on transactional data, 80
  - and bundled offers, 136–137
  - data setup for, 81
  - hierarchical, 80, 93–95
  - k-means algorithm, 80–82
  - and questionnaire data, 93–95
  - relevant segment targeting, 83–84
  - understanding segments, 82–83
- Conflict levels, 50
- Conflict resolution, 43–59
- Consumption, estimating wallet share based on, 135
- Core value disciplines of CRM, 28–29
- Cost driver identification, 46–47
- CRM. *See* Customer relationship management (CRM)
- Cross-selling strategies, 31–32
- Current trends, 192
- Customer acquisition:
  - data warehouse (DW) information, 79–89
  - decision diagram for, 69
  - dynamic perspective on, 105–106
  - improving lead information for, 140–141
  - overview, 67–70
  - questionnaires, 89–101
  - questions for determining direction, 70–71
  - reasons to focus on, 28, 30–31, 68–69
  - segment prioritization table, 75
  - target group determination, 71–75
  - target group profiling, 76–78
  - using decision trees, 78–79
  - workshops, 101–105
- Customer analytics:
  - complexity of, 10
  - defined, 2
  - information wheel, 7–8
  - ultimate purpose of, 13
  - whale model for, 20–22

- Customer base table, 118–123
- Customer behavior, 43, 97
- Customer development, 29
- Customer feedback improvement, 168–169
- Customer intelligence, and customer retention, 29
- Customer-level performance tracking, 195–198
- Customer lifetime value, 72–74
- Customer loyalty programs, 62–63
- Customer-made production, 14
- Customer mart, 121–122
- Customer needs. *See* Needs-based segmentation
- Customer prioritization, 28, 165–166
- Customer profiling, 72
- Customer relationship management (CRM), 61–66
  - customer loyalty programs, 62–63
  - four value disciplines of, 28–29 and value-based segmentation, 61–63
- Customer relationship management (CRM) processes, 8–9, 19–40
- Customer relationship management (CRM) strategy, 3
  - based on value-based segmentation, 32–34
  - customer analytics as inspiration for, 34–39
  - generic, 32–34
- Customer retention, 9, 29, 143–177
  - case study of, 215–233
    - churn and, 149–155
    - decision trees for, 146, 163–164
    - improving existing campaign hit rates, 159–161
    - information systems, 170–172
    - introduction to, 147–158
    - loyalty programs, 172–176
    - multiple campaigning, 161–165
    - potential data source identification, 152
    - questions for determining direction, 145–147
    - reasons to focus on, 32, 143–145
    - return on investment (ROI), 158–159
    - summary, 176–177
    - warning systems for, 169–172
- Customer scorecard, 4, 170–171
- Customer value. *See* Customer value estimation; Value-based segmentation
