

Index

- A**
- Accounting treatment, excluded as valuation determinant, 49
 - Arnott, Robert, 159
 - Asset class covariances, derivation of, 262–265
- B**
- Black, Fischer, 106
 - Black-Scholes-Merton option pricing model, 208
 - Bonds, equation for fixed-payment, 9–10
 - Book value per share:
 - constant growth rate calculation, 219–221
 - growth rate calculation, 217–219
 - growth rate change calculation, 221–225
 - Buffett, Warren, 208
 - Buybacks:
 - earnings growth calculation and, 225–228
 - Proctor & Gamble–Gillette example, 105–106
- C**
- Capital reinvestment:
 - in equity valuation formula, 46–51
 - known discount rate and, 59–60
 - Capital Structure Irrelevance Theorem, 46, 52, 56–57, 161–162, 212
 - recapitulated, 247–248
 - Case studies, 65–90
 - Coca-Cola, 66–73
 - Enron, 67, 85–90
 - Intel, 67, 73–79
 - market-implied, inflation-adjusted discount rates and, 82–85
 - Proctor & Gamble, 67, 79–82
 - Cash flows:
 - 10-year market cycle and, 110–111
 - volatility and, 147–149
 - Cash-purchase merger, Proctor & Gamble–Gillette example, 95–97, 102–103
 - Coca-Cola, case study of, 66–73
 - market-implied, inflation-adjusted discount rates and, 82–85
 - Contrarianism, 206
 - Corporate income taxes, *see* Income taxes, corporate
 - Cost of capital, Proctor & Gamble–Gillette merger and, 95
 - Covariances:
 - asset class derivation, 262–265
 - expected return and, 266–267
 - “Debt and Taxes” (Miller), 5, 55–56
 - Debt financing, *see* Leveraged equity securities
 - Debt-to-capital ratio, highly leveraged companies, 63–64
 - Default-free debt securities, *see* Treasury Inflation Protected Securities (TIPS)
 - Derivatives valuation, 2
 - Discount rate. *See also* Inflation-adjusted discount rate
 - debt-to-capital ratio and highly leveraged companies, 63–64
 - in general investment theory, 3–5
 - leverage equity valuation when inferred, 61–63
 - leverage equity valuation when known, 58–61
 - P/E ratios and portfolio construction, 164–168
 - unleveraged equities and growth factor, 37–41
 - Dividend discount models (DDMs), 72, 208, 210

- Dividend irrelevance theorem, 46, 49
- Dividend rate, in general investment theory, 3–5
- Dividends per share:
- constant growth rate calculation, 219–221
 - growth rate calculation, 217–219
 - growth rate change calculation, 221–225
- E**
- Earnings per share:
- constant growth rate calculation, 219–221
 - growth rate calculation, 217–219
 - growth rate change calculation, 221–225
- Efficient portfolio construction, 156–181
- adjusting for long-term expected returns on equity, 190–197
 - adjusting to changes in risk-adjusted expected return, 197–204
 - asset class covariance derivation, 262–265
 - for asset weights required to be nonnegative, 176–179
 - desirability and expected return, 182–186
 - desirability and feasibility, 186–190
 - effects of mean and volatility on return, 156–161
 - importance of portfolio rebalancing, 204–206
 - mathematical optimization subject to constraints, 259–261
 - P/E ratios and discount rate, 164–168
 - P/E ratios and financial conservation, 161–163
 - P/E ratios and growth, 158–172
 - for unconstrained weights case, 172–176
 - variance/covariance matrix inputs, 179–181
- Enron, case study of, 67, 85–90
- “Equity Duration” formula, derivation of, 239–240
- Equity securities, *see* Efficient portfolio construction; Leveraged equities; Unleveraged equities
- Exchange-of-shares transaction, Proctor & Gamble–Gillette merger example, 97–102
- F**
- Fama, Eugene, 241–243
- Finance and investment theory, 2–5
- Financial companies, 111, 113
- First-order differential method, 136
- Fisher, Irving, 8
- Fixed-payment bond equation, 9–10
- Franchise Value analysis, 5
- 10-year market cycle model test and, 109–110, 120
- G**
- Gross domestic product (GDP):
- inflation, money growth, interest rates and, 229–238
 - volatility and, 147–154
- Gillette Company:
- Proctor & Gamble cash-purchase example, 102–104
 - Proctor & Gamble exchange of shares example, 97–101
 - Proctor & Gamble merger valuations and, 91–97
 - Proctor & Gamble share repurchase and, 105–106
- Graham, Benjamin, 5
- Growth rates:
- Coca-Cola case study, 66–73
 - early theoretical models and, 210–211
 - Enron case study, 67, 85–90
 - in general investment theory, 3–5
 - inflation-adjusted discount rates and case studies, 82–85
 - Intel case study, 67, 73–79
 - organic versus “acquired,” 77, 82
 - P/E ratios and portfolio construction, 168–172
 - Proctor & Gamble case study, 67, 79–82
 - 10-year market cycle model test and, 115–121
 - unleveraged equities and discount rate, 37–41
- H**
- Highly leveraged companies, discount rate and debt-to-capital ratio, 63–64
- I**
- Incentive stock options, 106–108
- Income taxes, corporate:
- Coca-Cola case study, 67

- comparison of volatility of pretax and after-tax income, 255–256
 Enron case study, 67, 88
 Intel case study, 67, 76
 leveraged equities and, 52–58
 Proctor & Gamble case study, 67, 79
 Proctor & Gamble–Gillette merger and, 94–95
 10-year market cycle model test and, 119
 Inflation-adjusted discount rate:
 case studies and, 82–85
 10-year market cycle model test and, 121–127
 time series charts of unleveraged, 249–254
 volatility and, 149–154
 Inflation rate:
 adjustments to preserve neutrality in valuation formula, 244–246
 in fixed-rate rate valuation, 14–19
 money growth, interest rate, GDP and, 229–238
 in TIPS valuation, 9–14
 unleveraged valuation formula’s sensitivity to, 29–37
 Intel, case study of, 67, 73–79
 market-implied, inflation-adjusted discount rates and, 82–85
 Interest rates:
 in fixed-rate rate valuation, 17–19
 inflation, money growth, GDP and, 229–238
 relationship of observed P/E ratio and, 257–258
 Isoquant:
 expected return and, 182–186
 feasibility and, 186–190
- K**
- Kahneman, Daniel, 3
 Kuhn-Tucker (KT) conditions, 177
- L**
- LaGrange multipliers, 259–261
 Leibowitz, Martin, 5, 212
 Leveraged equity securities, 46–64
 corporate finance and basic valuation formulas, 46–51
 corporate income taxes and, 52–58
 discount rate and debt-to-capital ratio, 63–64
- inferred discount rates and, 61–63
 known discount rates and, 58–61
 volatility and, 140–147
 Leveraged recapitalization, Proctor & Gamble–Gillette example, 102–104
- M**
- Market cycles, *see* 10-year market cycle test of model
 Market prices:
 impact of GDP shocks on, 234–237
 impact of monetary policy and interest rates on, 229–234
 inferring discount rate from, 61–63
 Market-to-book relationship:
 constant growth rate calculation, 219–221
 growth rate change calculation, 221–225
 share buybacks and, 225–228
 Markowitz, Harry, 208
 Mergers and acquisitions:
 P&G–Gillette and share repurchase, 105–106
 P&G–Gillette cash-purchase example, 102–104
 P&G–Gillette exchange of shares example, 97–101
 P&G–Gillette valuation, 91–97
 Merton, Robert, 106
 Miller, Merton:
 Capital Structure Irrelevance Theorem, 46, 52, 56–57, 161–162, 212, 247–248
 “Debt and Taxes,” 5, 55–56
 dividend irrelevance theorem, 46, 49
 valuation model, 241–243
 Modigliani, Franco:
 Capital Structure Irrelevance Theorem, 46, 52, 56–57
 dividend irrelevance theorem, 46, 49
 Money growth, GDP and, 229–238
- N**
- Nonnegative asset weights, efficient portfolio construction and, 176–179
- O**
- Option strategies, 154–155
 Black-Scholes-Merton option pricing model, 208

- P**
- Pretax profits:
 comparison of volatility of after-tax income and, 255–256
 P&G–Gillette merger and, 94
 10-year market cycle model test and, 124–127
- Price/earnings (P/E) ratios, 20
 in 1974 bear market, 208
 1980’s interest rates and, 208–209
 efficient portfolio construction and discount rate, 164–168
 efficient portfolio construction and financial conservation, 161–163
 efficient portfolio construction and growth, 168–172
 historical inflation rates and, 33–37
 relationship of observed and interest rates, 257–258
 10-year market cycle model test and, 129–130
- Price volatility, *see* Volatility
- Proctor & Gamble:
 cash-purchase merger structure and, 102–104
 exchange of shares merger and, 97–101
 Gillette merger and, 91–97
 valuation case study, 67, 79–85
- Purchasing power protection, *see* Treasury Inflation Protected Securities (TIPS)
- R**
- Real unleveraged return on equity (ROE):
 Enron case study, 85–90
 10-year market cycle and, 111
- Rebalancing of portfolios, importance of, 204–206
- Reduced-form ranking method, 182–186
- Return on equity (ROE):
 constant growth rate calculation, 219–221
 early theoretical models and, 211
 growth rate calculation, 217–219
 growth rate change calculation, 221–225
 real unleveraged, and 10-year market cycle and, 111
 real unleveraged, and Enron case study, 85–90
- “Reverse engineering,” 61–63
- Risk-adjusted expected returns, portfolio construction and, 197–204
- Risk premium, *see* Volatility
- S**
- Scholes, Myron, 106
- Security Analysis* (Graham), 5
- Share exchange, *see* Exchange-of-shares transaction
- Share repurchase program:
 earnings growth calculation and, 225–228
 Proctor & Gamble–Gillette example, 105–106
- Sharpe, Bill, 208
- Smith, Vernon, 3
- State-space approach, 132
- Stock option grants, 106–108
- Survivorship bias, 10-year market cycle model test and, 119–120
- T**
- Tangible value, 10-year market cycle model test and, 110–111, 119
- Tech stock bubble, 212
- 10-year market cycle test of model, 106–131
 methodology, 109–113
 model’s predictive strength for subperiods, 128–131
 model’s predictive strength for whole period, 124–127
 sample descriptive data, 113–121
 valuation results, 121–124
- Theory of Finance, The* (Fama and Miller), 241
- TIPS, *see* Treasury Inflation Protected Securities (TIPS)
- Treasury Inflation Protected Securities (TIPS), 8–21
 efficient portfolio construction and, 191–204
 fixed-rate bonds contrasted, 14–19
 formulas for real cash flow rate valuation, 9–14
 implications, 19–21
 theoretical models and, 212
- Tversky, Amos, 3

U

Unconstrained asset weights case, efficient portfolio construction and, 172–176
Unleveraged equities, 22–45
discount rates and growth factors, 37–41
inflation sensitivity and, 29–37
Proctor & Gamble–Gillette merger example, 95–97
traditional valuations and, 41–45
valuation formula, mathematical development of, 24–28
volatility and, 136–140

V

Valuation formula, traditional, 241–243
adjustments to preserve inflation neutrality, 244–246

Valuation model formula, 22–24
Valuation models, 239–240
current theories, 211–213
future steps, 213–215
historical context of, 207–211
Value at Risk (VAR), 21
Volatility, 132–155
comparison of pretax and after-tax income, 255–256
leverage’s impact on, 140–147
methodology, 132–136
price change formula and estimates of, 139–140
price change formula derivation, 136–138
underlying variables and, 147–155
Volcker, Paul, 209
