

CONTENTS

Start here	1
Good choice!	1
This book	2
How this book works	3
The myth of mathematical clarity	5
The myths of quantification	7
The auditor's mission	8
Auditing simple risk assessments	11
1 Probabilities	12
2 Probabilistic forecaster	13
3 Calibration (also known as reliability)	13
4 Resolution	14
5 Proper score function	15
6 Audit point: Judging probabilities	17
7 Probability interpretations	17
8 Degree of belief	18
9 Situation (also known as an experiment)	19
10 Long run relative frequency	20
11 Degree of belief about long run relative frequency	21
12 Degree of belief about an outcome	22
13 Audit point: Mismatched interpretations of probability	24
14 Audit point: Ignoring uncertainty about probabilities	25
15 Audit point: Not using data to illuminate probabilities	25
16 Outcome space (also known as sample space, or possibility space)	26
17 Audit point: Unspecified situations	27
18 Outcomes represented without numbers	28
19 Outcomes represented with numbers	29
20 Random variable	29
21 Event	30

22	Audit point: Events with unspecified boundaries	31
23	Audit point: Missing ranges	32
24	Audit point: Top 10 risk reporting	32
25	Probability of an outcome	33
26	Probability of an event	34
27	Probability measure (also known as probability distribution, probability function, or even probability distribution function)	34
28	Conditional probabilities	36
29	Discrete random variables	37
30	Continuous random variables	38
31	Mixed random variables (also known as mixed discrete-continuous random variables)	39
32	Audit point: Ignoring mixed random variables	40
33	Cumulative probability distribution function	41
34	Audit point: Ignoring impact spread	43
35	Audit point: Confusing money and utility	44
36	Probability mass function	44
37	Probability density function	45
38	Sharpness	47
39	Risk	49
40	Mean value of a probability distribution (also known as the expected value)	50
41	Audit point: Excessive focus on expected values	51
42	Audit point: Misunderstanding 'expected'	51
43	Audit point: Avoiding impossible provisions	52
44	Audit point: Probability impact matrix numbers	53
45	Variance	54
46	Standard deviation	55
47	Semi-variance	55
48	Downside probability	55
49	Lower partial moment	56
50	Value at risk (VaR)	56
51	Audit point: Probability times impact	58

Some types of probability distribution	61
52 Discrete uniform distribution	62
53 Zipf distribution	62
54 Audit point: Benford's law	64
55 Non-parametric distributions	65
56 Analytical expression	65
57 Closed form (also known as a closed formula or explicit formula)	66
58 Categorical distribution	67
59 Bernoulli distribution	67
60 Binomial distribution	68
61 Poisson distribution	69
62 Multinomial distribution	70
63 Continuous uniform distribution	70
64 Pareto distribution and power law distribution	71
65 Triangular distribution	73
66 Normal distribution (also known as the Gaussian distribution)	74
67 Audit point: Normality tests	77
68 Non-parametric continuous distributions	78
69 Audit point: Multi-modal distributions	78
70 Lognormal distribution	79
71 Audit point: Thin tails	80
72 Joint distribution	80
73 Joint normal distribution	81
74 Beta distribution	82
Auditing the design of business prediction models	83
75 Process (also known as a system)	84
76 Population	84
77 Mathematical model	85
78 Audit point: Mixing models and registers	86
79 Probabilistic models (also known as stochastic models or statistical models)	86
80 Model structure	88
81 Audit point: Lost assumptions	89
82 Prediction formulae	89

83	Simulations	90
84	Optimization	90
85	Model inputs	90
86	Prediction formula structure	91
87	Numerical equation solving	93
88	Prediction algorithm	94
89	Prediction errors	94
90	Model uncertainty	94
91	Audit point: Ignoring model uncertainty	95
92	Measurement uncertainty	96
93	Audit point: Ignoring measurement uncertainty	96
94	Audit point: Best guess forecasts	97
95	Prediction intervals	97
96	Propagating uncertainty	98
97	Audit point: The flaw of averages	99
98	Random	100
99	Theoretically random	101
100	Real life random	102
101	Audit point: Fooled by randomness (1)	102
102	Audit point: Fooled by randomness (2)	104
103	Pseudo random number generation	104
104	Monte Carlo simulation	105
105	Audit point: Ignoring real options	109
106	Tornado diagram	109
107	Audit point: Guessing impact	111
108	Conditional dependence and independence	112
109	Correlation (also known as linear correlation)	113
110	Copulas	113
111	Resampling	114
112	Causal modelling	114
113	Latin hypercube	114
114	Regression	115
115	Dynamic models	116
116	Moving average	116

Auditing model fitting and validation	117
117 Exhaustive, mutually exclusive hypotheses	118
118 Probabilities applied to alternative hypotheses	119
119 Combining evidence	120
120 Prior probabilities	120
121 Posterior probabilities	120
122 Bayes's theorem	121
123 Model fitting	123
124 Hyperparameters	126
125 Conjugate distributions	126
126 Bayesian model averaging	128
127 Audit point: Best versus true explanation	128
128 Hypothesis testing	129
129 Audit point: Hypothesis testing in business	130
130 Maximum a posteriori estimation (MAP)	131
131 Mean a posteriori estimation	131
132 Median a posteriori estimation	132
133 Maximum likelihood estimation (MLE)	132
134 Audit point: Best estimates of parameters	135
135 Estimators	135
136 Sampling distribution	138
137 Least squares fitting	138
138 Robust estimators	140
139 Over-fitting	140
140 Data mining	141
141 Audit point: Searching for 'significance'	142
142 Exploratory data analysis	143
143 Confirmatory data analysis	143
144 Interpolation and extrapolation	143
145 Audit Point: Silly extrapolation	144
146 Cross validation	145
147 R^2 (the coefficient of determination)	145
148 Audit point: Happy history	147
149 Audit point: Spurious regression results	147

150	Information graphics	148
151	Audit point: Definition of measurements	148
152	Causation	149

Auditing and samples **151**

153	Sample	152
154	Audit point: Mixed populations	152
155	Accessible population	152
156	Sampling frame	153
157	Sampling method	153
158	Probability sample (also known as a random sample)	154
159	Equal probability sampling (also known as simple random sampling)	155
160	Stratified sampling	155
161	Systematic sampling	156
162	Probability proportional to size sampling	156
163	Cluster sampling	156
164	Sequential sampling	157
165	Audit point: Prejudging sample sizes	158
166	Dropouts	159
167	Audit point: Small populations	160

Auditing in the world of high finance **163**

168	Extreme values	164
169	Stress testing	165
170	Portfolio models	166
171	Historical simulation	168
172	Heteroskedasticity	169
173	RiskMetrics variance model	169
174	Parametric portfolio model	170
175	Back-testing	170
176	Audit point: Risk and reward	171
177	Portfolio effect	172
178	Hedge	172
179	Black–Scholes	173

180	The Greeks	175
181	Loss distributions	176
182	Audit point: Operational loss data	178
183	Generalized linear models	179
