<b>Preface</b>	<b>xi</b>
<b>List of Symbols</b>	<b>xiii</b>
<b>1 Fourier Pricing Methods</b>	<b>1</b>
1.1 Introduction	1
1.2 A general representation of option prices	1
1.3 The dynamics of asset prices	3
1.4 A generalized function approach to Fourier pricing	6
1.4.1 Digital payoffs and the Dirac delta function	7
1.4.2 The Fourier transform of digital payoffs	8
1.4.3 The cash-or-nothing option	9
1.4.4 The asset-or-nothing option	10
1.4.5 European options: the general pricing formula	11
1.5 Hilbert transform	12
1.6 Pricing via FFT	14
1.6.1 The sampling theorem	15
1.6.2 The truncated sampling theorem	17
1.6.3 Why bother?	21
1.6.4 The pricing formula	21
1.6.5 Application of the FFT	23
1.7 Related literature	26
<b>2 The Dynamics of Asset Prices</b>	<b>29</b>
2.1 Introduction	29
2.2 Efficient markets and Lévy processes	30
2.2.1 Random walks and Brownian motions	30
2.2.2 Geometric Brownian motion	31
2.2.3 Stable processes	31
2.2.4 Characteristic functions	32
2.2.5 Lévy processes	34
2.2.6 Infinite divisibility	36
2.3 Construction of Lévy markets	39

2.3.1	The compound Poisson process	39
2.3.2	The Poisson point process	41
2.3.3	Sums over Poisson point processes	42
2.3.4	The decomposition theorem	45
2.4	Properties of Lévy processes	49
2.4.1	Pathwise properties of Lévy processes	49
2.4.2	Completely monotone Lévy densities	53
2.4.3	Moments of a Lévy process	54
<b>3</b>	<b>Non-stationary Market Dynamics</b>	<b>57</b>
3.1	Non-stationary processes	57
3.1.1	Self-similar processes	57
3.1.2	Self-decomposable distributions	58
3.1.3	Additive processes	60
3.1.4	Sato processes	63
3.2	Time changes	63
3.2.1	Stochastic clocks	64
3.2.2	Subordinators	64
3.2.3	Stochastic volatility	66
3.2.4	The time-change technique	67
3.3	Simulation of Lévy processes	73
3.3.1	Simulation via embedded random walks	74
3.3.2	Simulation via truncated Poisson point processes	74
<b>4</b>	<b>Arbitrage-Free Pricing</b>	<b>79</b>
4.1	Introduction	79
4.2	Equilibrium and arbitrage	79
4.3	Arbitrage-free pricing	80
4.3.1	Arbitrage pricing theory	80
4.3.2	Martingale pricing theory	81
4.3.3	Radon–Nikodym derivative	82
4.4	Derivatives	83
4.4.1	The replicating portfolio	83
4.4.2	Options and pricing kernels	84
4.4.3	Plain vanilla options and digital options	86
4.4.4	The Black–Scholes model	88
4.5	Lévy martingale processes	89
4.5.1	Construction of martingales through Lévy processes	89
4.5.2	Change of equivalent measures for Lévy processes	90
4.5.3	The Esscher transform	91
4.6	Lévy markets	92
<b>5</b>	<b>Generalized Functions</b>	<b>95</b>
5.1	Introduction	95
5.2	The vector space of test functions	95
5.3	Distributions	97
5.3.1	Dirac delta and other singular distributions	98

5.4	The calculus of distributions	99
5.4.1	Distribution derivative	100
5.4.2	Special examples of distributions	100
5.5	Slow growth distributions	103
5.6	Function convolution	104
5.6.1	Definitions	104
5.6.2	Some properties of convolution	104
5.7	Distributional convolution	105
5.7.1	The direct product distributions	105
5.7.2	The convolution of distributions	106
5.8	The convolution of distributions in $\mathcal{S}$	108
<b>6</b>	<b>The Fourier Transform</b>	<b>113</b>
6.1	Introduction	113
6.2	The Fourier transformation of functions	113
6.2.1	Fourier series	113
6.2.2	Fourier transform	117
6.2.3	Parseval theorem	120
6.3	Fourier transform and option pricing	120
6.3.1	The Carr–Madan approach	120
6.3.2	The Lewis approach	122
6.4	Fourier transform for generalized functions	123
6.4.1	The Fourier transforms of testing functions of rapid descent	123
6.4.2	The Fourier transforms of distributions of slow growth	124
6.5	Exercises	125
6.6	Fourier option pricing with generalized functions	127
<b>7</b>	<b>Fourier Transforms at Work</b>	<b>129</b>
7.1	Introduction	129
7.2	The Black–Scholes model	130
7.3	Finite activity models	132
7.3.1	Discrete jumps	132
7.3.2	The Merton model	133
7.4	Infinite activity models	134
7.4.1	The Variance Gamma model	135
7.4.2	The CGMY model	137
7.5	Stochastic volatility	138
7.5.1	The Heston model	141
7.5.2	Vanilla options in the Heston model	142
7.6	FFT at Work	146
7.6.1	Market calibration	147
7.6.2	Pricing exotics	147
	<b>Appendices</b>	<b>153</b>
<b>A</b>	<b>Elements of Probability</b>	<b>155</b>
A.1	Elements of measure theory	155

A.1.1	Integration	157
A.1.2	Lebesgue integral	158
A.1.3	The characteristic function	160
A.1.4	Relevant probability distributions	161
A.1.5	Convergence of sequences of random variables	167
A.1.6	The Radon–Nikodym derivative	167
A.1.7	Conditional expectation	168
A.2	Elements of the theory of stochastic processes	169
A.2.1	Stochastic processes	169
A.2.2	Martingales	170
<b>B</b>	<b>Elements of Complex Analysis</b>	<b>173</b>
B.1	Complex numbers	173
B.1.1	Why complex numbers?	173
B.1.2	Imaginary numbers	174
B.1.3	The complex plane	175
B.1.4	Elementary operations	176
B.1.5	Polar form	177
B.2	Functions of complex variables	179
B.2.1	Definitions	179
B.2.2	Analytic functions	179
B.2.3	Cauchy–Riemann conditions	180
B.2.4	Multi-valued functions	181
<b>C</b>	<b>Complex Integration</b>	<b>185</b>
C.1	Definitions	185
C.2	The Cauchy–Goursat theorem	186
C.3	Consequences of Cauchy’s theorem	187
C.4	Principal value	190
C.5	Laurent series	193
C.6	Complex residue	196
C.7	Residue theorem	197
C.8	Jordan’s Lemma	199
<b>D</b>	<b>Vector Spaces and Function Spaces</b>	<b>201</b>
D.1	Definitions	201
D.2	Inner product space	203
D.3	Topological vector spaces	205
D.4	Functionals and dual space	205
D.4.1	Algebraic dual space	206
D.4.2	Continuous dual space	206
<b>E</b>	<b>The Fast Fourier Transform</b>	<b>207</b>
E.1	Discrete Fourier transform	207
E.2	Fast Fourier transform	208

---

<b>F The Fractional Fast Fourier Transform</b>	<b>215</b>
F.1 Circular matrix	216
F.1.1 Matrix vector multiplication	218
F.2 Toeplitz matrix	219
F.2.1 Embedding in a circular matrix	219
F.2.2 Applications to pricing	220
F.3 Some numerical results	221
F.3.1 The Variance Gamma model	221
F.3.2 The Heston model	223
<b>G Affine Models: The Path Integral Approach</b>	<b>225</b>
G.1 The problem	225
G.2 Solution of the Riccati equations	227
<b>Bibliography</b>	<b>229</b>
<b>Index</b>	<b>233</b>
