PREFACE	xi
ACKNOWLEDGEMENTS	xiii
SUMMARY	xv
1 INTRODUCTION	1
1.1 Scope of Applications	1
1.2 Laws and Regulations	2
1.3 Theories on the Development of the AVM	4
2 OBJECTIVES OF APPLICATIONS	7
2.1 System Identification	7
2.1.1 Eigenfrequencies and Mode Shapes	8
2.1.2 Damping	11
2.1.3 Deformations and Displacements	11
2.1.4 Vibration Intensity	12
2.1.5 Trend Cards	13
2.2 Stress Test	13
2.2.1 Determination of Static and Dynamic Stresses	14
2.2.2 Determination of the Vibration Elements	14
2.2.3 Stress of Individual Structural Members	15
2.2.4 Determination of Forces in Tendons and Cables	15

2.3	Assessment of Stresses	17
2.3.1	Structural Safety	17
2.3.2	Structural Member Safety	19
2.3.3	Maintenance Requirements and Intervals	19
2.3.4	Remaining Operational Lifetime	21
2.4	Load Observation (Determination of External Influences)	21
2.4.1	Load Collective	21
2.4.2	Stress Characteristic	21
2.4.3	Verification of Load Models	23
2.4.4	Determination of Environmental Influences	24
2.4.5	Determination of Specific Measures	24
2.4.6	Check on the Success of Rehabilitation Measures	25
2.4.7	Dynamic Effects on Cables and Tendons	25
2.4.8	Parametric Excitation	27
2.5	Monitoring of the Condition of Structures	28
2.5.1	Assessment of Individual Objects	29
2.5.2	Periodic Monitoring	31
2.5.3	BRIMOS® Recorder	31
2.5.4	Permanent Monitoring	34
2.5.5	Subsequent Measures	35
2.6	Application of Ambient Vibration Testing to Structures for Railways	35
2.6.1	Sleepers	36
2.6.2	Noise and Vibration Problems	39
2.7	Limitations	49
2.7.1	Limits of Measuring Technology	49
2.7.2	Limits of Application	51
2.7.3	Limits of Analysis	52
2.7.4	Perspectives	53
	References	54
3	FEEDBACK FROM MONITORING TO BRIDGE DESIGN	55
3.1	Economic Background	55
3.2	Lessons Learned	56
3.2.1	Conservative Design	56
3.2.2	External versus Internal Pre-stressing	57
3.2.3	Influence of Temperature	57
3.2.4	Displacement	61
3.2.5	Large Bridges versus Small Bridges	64
3.2.6	Vibration Intensities	66

3.2.7	Damping Values of New Composite Bridges	68
3.2.8	Value of Patterns	68
3.2.9	Understanding of Behaviour	72
3.2.10	Dynamic Factors	72
References		75
4	PRACTICAL MEASURING METHODS	77
4.1	Execution of Measuring	78
4.1.1	Test Planning	83
4.1.2	Levelling of the Sensors	83
4.1.3	Measuring the Structure	84
4.2	Dynamic Analysis	84
4.2.1	Calculation Models	84
4.2.2	State of the Art	88
4.3	Measuring System	89
4.3.1	BRIMOS®	89
4.3.2	Sensors	90
4.3.3	Data-Logger	91
4.3.4	Additional Measuring Devices and Methods	92
4.4	Environmental Influence	93
4.5	Calibration and Reliability	96
4.6	Remaining Operational Lifetime	97
4.6.1	Rainflow Algorithm	98
4.6.2	Calculation of Stresses by FEM	101
4.6.3	S–N Approach and Damage Accumulation	104
4.6.4	Remaining Service Lifetime by Means of Existing Traffic Data and Additional Forward and Backward Extrapolation	105
4.6.5	Conclusions and Future Work	106
References		109
5	PRACTICAL EVALUATION METHODS	111
5.1	Plausibility of Raw Data	111
5.2	AVM Analysis	112
5.2.1	Recording	112
5.2.2	Data Reduction	114
5.2.3	Data Selection	115
5.2.4	Frequency Analysis, ANPSD (Averaged Normalized Power Spectral Density)	115
5.2.5	Mode Shapes	120
5.2.6	Damping	121
5.2.7	Deformations	123

5.2.8	Vibration Coefficients	125
5.2.9	Counting of Events	126
5.3	Stochastic Subspace Identification Method	129
5.3.1	The Stochastic Subspace Identification (SSI) Method	129
5.3.2	Application to Bridge Z24	130
5.4	Use of Modal Data in Structural Health Monitoring	134
5.4.1	Finite Element Model Updating Method	134
5.4.2	Application to Bridge Z24	141
5.4.3	Conclusions	147
5.5	External Tendons and Stay Cables	149
5.5.1	General Information	149
5.5.2	Theoretical Bases	150
5.5.3	Practical Implementation	150
5.5.4	State of the Art	151
5.5.5	Rain–Wind Induced Vibrations of Stay Cables	152
5.5.6	Assessment	152
5.6	Damage Identification and Localization	153
5.6.1	Motivation for SHM	154
5.6.2	Current Practice	155
5.6.3	Condition and Damage Indices	157
5.6.4	Basic Philosophy of SHM	159
5.7	Damage Prognosis	161
5.7.1	Sensing Developments	162
5.7.2	Data Interrogation Procedure for Damage Prognosis	162
5.7.3	Predictive Modelling of Damage Evolution	163
5.8	Animation and the Modal Assurance Criterion (MAC)	164
5.8.1	Representation of the Calculated Mode Shapes	164
5.8.2	General Requirements	164
5.8.3	Correlation of Measurement and Calculation (MAC)	164
5.8.4	Varying Number of Eigenvectors	165
5.8.5	Complex Eigenvector Measurement	165
5.8.6	Selection of Suitable Check Points using the MAC	166
5.9	Ambient Vibration Derivatives (AVD [®])	168
5.9.1	Aerodynamic Derivatives	168
5.9.2	Applications of the AVM	168
5.9.3	Practical Implementation	169
	References	170
6	THEORETICAL BASES	173
6.1	General Survey on the Dynamic Calculation Method	174
6.2	Short Description of Analytical Modal Analysis	176

6.3	Equation of Motion of Linear Structures	178
6.3.1	SDOF System	178
6.3.2	MDOF System	179
6.3.3	Influence of Damping	181
6.4	Dynamic Calculation Method for the AVM	181
6.5	Practical Evaluation of Measurements	181
6.5.1	Eigenfrequencies	181
6.5.2	Mode Shapes	183
6.5.3	Damping	185
6.6	Theory on Cable Force Determination	185
6.6.1	Frequencies of Cables as a Function of the Inherent Tensile Force	185
6.6.2	Influence of the Bending Stiffness	190
6.6.3	Influence of the Support Conditions	192
6.6.4	Comparison of the Defined Cases with Experimental Results	193
6.6.5	Measurement Data Adjustment for Exact Cable Force Determination	197
6.7	Transfer Functions Analysis	199
6.7.1	Mathematical Backgrounds	199
6.7.2	Transfer Functions in the Vibration Analysis	205
6.7.3	Applications (Examples)	214
6.8	Stochastic Subspace Identification	222
6.8.1	Stochastic State-Space Models	223
6.8.2	Stochastic System Identification	226
	References	232
7	OUTLOOK	235
7.1	Decision Support Systems	236
7.2	Sensor Technology and Sensor Networks	236
7.2.1	State-of-the-Art Sensor Technology	236
7.3	Research Gaps and Opportunities	237
7.4	International Collaboration	239
7.4.1	Collaboration Framework	239
7.4.2	Activities	243
8	EXAMPLES FOR APPLICATION	245
8.1	Aitertal Bridge, Post-tensional T-beam (1956)	245
8.2	Donaustadt Bridge, Cable-Stayed Bridge in Steel (1996)	248
8.3	F9 Viaduct Donnergraben, Continuous Box Girder (1979)	250
8.4	Europa Bridge, Continuous Steel Box Girder (1961)	252

8.5 Gasthofalm Bridge, Composite Bridge (1979) 256
8.6 Kao Ping Hsi Bridge, Cable-Stayed Bridge (2000) 258
8.7 Inn Bridge Roppen, Concrete Bridge (1936) 260
8.8 Slope Bridge Saag, Bridge Rehabilitation (1998) 263
8.9 Flyover St Marx, Permanent Monitoring 265
8.10 Mur Bridge in St Michael, Bridge Rehabilitation 270
8.11 Rosen Bridge in Tulln, Concrete Cable-Stayed Bridge (1995) 272
8.12 VOEST Bridge, Steel Cable-Stayed Bridge (1966) 275
8.13 Taichung Bridge, Cable-Stayed Bridge 279
