

## Contents

<b>Foreword by Andrea Sironi</b>	<b>xi</b>
<b>Preface</b>	<b>xiii</b>
<b>Acknowledgments</b>	<b>xvii</b>
<b>1 The Development of ORM in UniCredit Group</b>	<b>1</b>
1.1 A brief history of a fast-growing group	1
1.2 Creating a new function	2
1.3 Developing the new control system	3
1.4 Challenges in the early stages	4
1.5 Methodology to measure operational risk	4
1.6 Training and internal communication focus	5
1.7 International regulatory challenges	6
1.8 Reputational risk management	7
<b>2 The Calculation Dataset</b>	<b>9</b>
2.1 Definitions	9
2.2 Rules of thumb	10
2.3 Internal loss data	12
2.3.1 Business line mapping	12
2.3.2 Event type classifications	14
2.3.3 Data quality analysis	18
2.3.4 Special cases	18
2.4 Minimum loss threshold	19
2.5 External data	20
2.5.1 Public or external data sources	21
2.5.2 Consortium data	22
2.5.3 Scenario data	23

2.6	Business environment and internal control factors	23
2.7	Scenarios	24
2.8	Insurance information	24
2.9	Scaling data	25
2.10	The Unicredit Group Operational Risk database evolution	26
2.11	Final considerations	26
<b>3</b>	<b>Loss Distribution Approaches</b>	<b>27</b>
3.1	Calculation dataset building	29
3.1.1	Internal calculation dataset	29
3.1.2	External calculation dataset	31
3.1.3	Scenario-generated calculation dataset	32
3.1.4	Risk indicators calculation dataset	32
3.2	General LDA framework	32
3.3	Operational risk classes	35
3.3.1	Identically distributed risk classes	35
3.3.2	Inflation adjustment	38
3.3.3	Data independence	39
3.4	Parametric estimation and goodness-of-fit techniques	41
3.4.1	Severity distributions	41
3.4.2	Graphical methods	44
3.4.3	Analytical methods	44
3.4.4	Frequency distributions	48
3.5	Applying extreme value theory	50
3.6	<i>g-and-h</i> distribution theory	53
3.7	Calculating operational capital at risk	56
3.7.1	Loss severity distribution	58
3.7.2	Loss frequency distribution	61
3.7.3	Annual loss distribution	63
3.7.4	Single class capital at risk	66
3.8	Insurance modeling	66
3.8.1	Appropriate haircuts reflecting the policy's declining residual term	68
3.8.2	Payment uncertainty	68
3.8.3	Counterparty risk	71
3.8.4	Application of insurance	72
3.9	Adjustment for risk indicators	73

3.10	Operational risk classes aggregation	75
3.10.1	Copulae functions	76
3.10.2	Elliptical copulae	78
3.10.3	Archimedean copulae	81
3.10.4	Choice of copula	84
3.10.5	Correlation coefficients	84
3.11	The closed-form approximation for OpVaR	86
3.11.1	Effect of the minimum threshold on capital at risk	88
3.12	Confidence band for capital at risk	89
3.13	Stress testing	91
3.14	Loss data minimum threshold setting	91
3.15	Empirical application on Algo OpData	92
3.15.1	Descriptive statistics	95
3.15.2	Autocorrelation analysis	95
3.15.3	Capital at risk estimates using parametric models	99
3.15.4	Capital at risk estimates using EVT	116
3.15.5	Capital at risk estimates using the <i>g-and-h</i> distribution	129
3.15.6	Capital at risk estimates considering correlation	133
3.16	Regulatory capital requirement	136
3.16.1	The consolidated capital requirement	136
3.16.2	The individual capital requirement	137
3.17	Economic capital requirement	140
3.18	Integration of operational risk in the budgeting process	145
<b>4</b>	<b>Analyzing Insurance Policies</b>	<b>147</b>
4.1	Insurance management and risk transfer	147
4.2	Qualifying criteria in the Basel 2 capital framework	148
4.2.1	Rating of the insurance company	149
4.2.2	Duration and residual term of the insurance contract	150
4.2.3	Policy termination requisites	151
4.2.4	Claims reimbursement uncertainty and ineffective coverage	152
4.2.5	Conclusions	152

---

x	Contents	
4.3	A practical application to traditional insurance	153
4.3.1	Insurance policies to cover financial institutions' operational risks	153
4.3.2	Operational event types and available insurance coverage	155
<b>5</b>	<b>Managing Reputational Risk</b>	<b>159</b>
5.1	Introducing reputational risk	159
5.2	A financial institution's reputational risk exposure	160
5.3	Managing reputational risk: a matter of policy	162
5.4	Reputational risk measurement	164
5.4.1	Reputational risk as a function of share price volatility	164
5.4.2	Measuring reputational risk using scenarios	173
5.4.3	Scoring-card-based models for reputational risk assessment	177
5.5	A recent example of reputational event	178
5.5.1	A description of the event	179
5.5.2	Background	179
5.5.3	How the fake trading occurred	179
5.5.4	The discovery and first reactions	180
5.5.5	Measures planned and taken	182
5.5.6	Immediate consequences for SocGen	183
5.5.7	Reputational issues and comments	183
5.5.8	The lessons learned – what can we do to avoid being next?	186
5.5.9	Psychological, 'soft' factors	186
5.5.10	Control instruments	187
5.5.11	Managing data and signals	187
<b>6</b>	<b>Conclusions</b>	<b>189</b>
	<b>References</b>	<b>193</b>
	<b>Further reading</b>	<b>195</b>
	<b>Index</b>	<b>201</b>
