Preface	xxiii
PART I INTRODUCTION	1
1 The Evolution of Financial Analysis	3
1.1 Bookkeeping	3
1.2 Modern finance	8
1.3 Departments, silos and analysis	10
1.4 The IT system landscape	11
1.5 New approach	15
1.6 Hazards of a single solution	17
2 Finding the Elements	19
2.1 The notion of elements	19
2.1.1 Elements and science	19
2.1.2 Analyzing analysis	21
2.2 Elements of financial analysis	21
2.2.1 Liquidity	22
2.2.2 Value and income	22
2.2.3 Risk and sensitivity analysis	23
2.3 Input elements	25
2.4 Financial events and expected cash flows	26
2.5 Risk factors and risk categories	29
2.6 The time dimension	31
2.6.1 Time and the calendar time	31
2.6.2 The role of intervals	32
2.6.3 Double existence of time	32

vi	Contents	
2.7	Classification of analysis	33
2.7.1	Liquidation and going-concern view	33
2.7.2	Analysis types	35
2.8	Nonfinancial cash flows	37
2.9	The methodology as an image	39
PART II	INPUT ELEMENTS	41
3	Financial Contracts	43
3.1	Modeling of financial contracts	43
3.2	Standard contract types	46
3.3	Rules and mechanisms of standard contracts	51
3.3.1	Principal amortization patterns	51
3.3.2	Principal draw-down patterns (step-up)	53
3.3.3	Interest payment patterns	54
3.3.4	Fixed/variable (rate adjustments)	55
3.3.5	FX rates	57
3.3.6	Stock patterns	57
3.3.7	Commodity patterns	58
3.3.8	Plain vanilla option patterns	58
3.3.9	Exotic option patterns	59
3.3.10	Credit risk	60
3.3.11	Behavioral patterns	61
3.4	Examples	62
3.4.1	Principal at maturity (PAM)	62
3.4.2	Annuities (ANN)	63
3.4.3	Regular amortizer (RGM)	64
3.4.4	Interest rate swap (IRSWP)	65
3.4.5	Forward rate agreement (FRA)	66
3.4.6	Bond and interest rate options (IROPT)	67
3.5	Nonstandard contract types	68
3.5.1	Input elements and events	69
3.5.2	Analysis elements	70
	Appendix: Practical considerations	70
3.A.1	Mapping process	71
3.A.2	Data quality	71
4	Market Risk Factors	73
4.1	Expectations	74
4.1.1	Economic expectations	74
4.1.2	Arbitrage-free markets and risk-neutral valuation	75
4.1.3	Absence of arbitrage and economic expectation	79
4.1.4	Linear and nonlinear effects	80
4.2	Static modeling	81
4.2.1	Interest rates	81
4.2.2	Stocks, exchange rates and commodities	84
4.2.3	Spreads as risk factors	85

	Contents	vii
4.3	Stochastic market models: the arbitrage-free world	87
4.3.1	Stock price models	87
4.3.2	Beyond geometric Brownian motion	90
4.3.3	Interest rates: general considerations	91
4.3.4	Short rate models	92
4.3.5	Forward rate models	93
4.4	Stochastic market models: the real world	96
4.4.1	Economic scenario generation	97
4.4.2	Modeling individual products: stocks and commodities	98
4.4.3	Product rates	100
4.5	Alternative valuation techniques	101
4.5.1	Arbitrage-free and complete markets	102
4.5.2	Arbitrage-free incomplete markets	103
4.5.3	Discounting with deflators	105
4.5.4	Arbitrage opportunities and deflators	107
	Further reading	108
5	Counterparty	111
5.1	Exposure, rating and probabilities of default	111
5.2	Data determining gross exposure	113
5.2.1	Counterparty descriptive data	113
5.2.2	Counterparty hierarchies and group structures	114
5.2.3	Counterparty and financial contracts	115
5.3	Credit enhancements	115
5.3.1	Credit enhancements and financial contracts	116
5.3.2	Guarantees	118
5.3.3	Credit derivatives	120
5.3.4	Collaterals	124
5.3.5	Close-out netting agreement	125
5.3.6	Double default	126
5.4	Credit line and limits	127
5.4.1	Credit lines	127
5.4.2	Credit line exposure	128
5.4.3	Credit limits	130
5.5	Credit ratings	131
5.5.1	Measurement of credit rating	131
5.5.2	Classifying credit ratings	132
5.5.3	Ratings classes and exposures	132
5.5.4	Rating techniques	134
	Further reading	134
6	Behavior	135
6.1	Risk sources and behavior	136
6.2	Market-related behavior	138
6.2.1	Replication	138
6.2.2	Prepayment	143

viii	Contents	
	6.2.3 Sales	145
	6.2.4 Draw-down	146
6.3	Insurance-related behavior	148
	6.3.1 Mortality, longevity and invalidity	148
	6.3.2 Surrender/lapse	149
	6.3.3 Annuity conversion	150
6.4	Credit risk-related behavior	151
	6.4.1 Migration and probability of default	151
	6.4.2 Recovery	152
	6.4.3 Used at default	153
6.5	Sequence of behavioral effects	154
	Further reading	155
7	Costs	157
	7.1 Introduction to cost accounting	157
	7.1.1 Fixed and variable costs	158
	7.1.2 Standard cost accounting	159
	7.1.3 Activity-based cost accounting	161
	7.1.4 Examples of cost allocation	162
	7.2 Allocating costs to financial contracts	164
	7.2.1 Cost, contracts and counter parties	164
	7.2.2 Cost patterns in the financial service sector	166
	7.3 Integration of costs into the general framework	166
	7.3.1 Costs as a financial event	167
	7.3.2 Dealing with costs in different temporal modes	168
	7.3.3 Costs and risk	169
	7.4 Summary and conclusions	171
	Further reading	172
PART III	ANALYSIS – LIQUIDATION VIEW	173
8	Financial Events and Liquidity	175
	8.1 Financial event processing	176
	8.2 Examples	178
	8.2.1 Fixed rate instruments	178
	8.2.2 Variable rate instruments	180
	8.2.3 Swaps	182
	8.2.4 Forward rate agreements	183
	8.3 Behavioral events	183
	8.4 Liquidity reports	186
	8.4.1 Cash management	186
	8.4.2 Liquidity gap	186
	Further reading	190

9 Value, Income and FTP	191
9.1 Valuation principles	191
9.1.1 Value and income	192
9.1.2 Overview of valuation principles	194
9.1.3 Parallel valuation techniques and balance sheets	195
9.2 The big four	197
9.2.1 Nominal value	197
9.2.2 Amortized cost	198
9.2.3 Historic/write-off at end	199
9.2.4 Mark-to-market/fair value	200
9.3 Other valuation principles	202
9.3.1 Linear write-off	202
9.3.2 Lower of cost or market	202
9.3.3 Minimal value	203
9.4 Special cases	203
9.4.1 Multicurrency	204
9.4.2 Credit-related impairment	205
9.4.3 Operational considerations	206
9.5 IFRS 32, 39	207
9.6 Funds transfer pricing	210
9.6.1 The problem	210
9.6.2 The accrual method	213
9.6.3 The NPV method	215
9.6.4 Nonmaturity contracts	216
Further reading	218
10 Sensitivity	219
10.1 Challenges of sensitivity calculation	219
10.2 Interest rate sensitivities from events	221
10.3 Other market sensitivities	225
10.4 Behavioral sensitivities	226
10.4.1 Credit default sensitivity	226
10.4.2 Mortality sensitivity	230
10.5 Sensitivity reports	231
10.5.1 Interest sensitivity gap	231
10.5.2 Duration and key rate duration	234
10.5.3 Other market sensitivity reports	235
10.5.4 Credit exposure	236
10.5.5 Limits	237
11 Risk	241
11.1 Risk and VaR	241
11.1.1 Risk	241
11.1.2 VaR	243

x	Contents	
11.2	Analytical VaR methods	244
11.2.1	Market risk	244
11.2.2	CreditRisk+	246
11.2.3	Insurance risk	250
11.2.4	Combining risks	252
11.3	Numerical VaR methods	253
11.3.1	Market risk	253
11.3.2	Credit risk	254
11.3.3	Insurance risk	258
11.3.4	Liquidity risk and earning at risk	258
11.4	Expected shortfall	259
11.5	Stress and shock scenarios	260
11.6	Regulatory risk measures	262
11.7	Backtesting	263
11.7.1	Type I and type II errors	263
11.7.2	Market risk: VaR model backtesting	264
11.7.3	Credit risk: rating backtesting	266
11.7.4	Liquidity risk methods	269
	Appendix: Historization	271
11.A.1	Granularity	273
11.A.2	Data reduction	274
11.A.3	Intraday and parallel histories	275
	Further reading	275
12	Operational Risk	277
12.1	Basic indicator and standardized approach	279
12.2	Statistical basis of the advanced measurement approach	280
12.2.1	Definitions	280
12.2.2	Self-assessment approach	281
12.2.3	Loss distribution approach	281
12.2.4	Risk indicators approach	283
12.2.5	Output	284
12.3	Operational value at risk	285
12.3.1	Static	285
12.3.2	Dynamic	286
	Further reading	288
	PART IV ANALYSIS – GOING-CONCERN VIEW	289
13	General Mechanisms	293
13.1	Market conditions and general risk factors	293
13.2	New financial production	294
13.2.1	Volume	294
13.2.2	Characteristics	296
13.2.3	Pricing	298

13.3	Behavior and counterparty	299
13.4	Cost	300
13.5	Balancing	301
	13.5.1 Dynamic balancing	301
	13.5.2 Static balancing and reconciliation	304
	Appendix: Aggregation	305
	13.A.1 Single contract level and performance	305
	13.A.2 Contract aggregation	307
14	Banks	309
14.1	Chart of accounts and portfolio structures	309
14.2	Forecasting volume and characteristics	311
	14.2.1 Loans and mortgages, bond issues	312
	14.2.2 Current accounts, savings and deposits	313
	14.2.3 Trading and off-balance sheet	314
	14.2.4 Other special accounts	316
	14.2.5 Liquidity interbank and equity	316
14.3	Adding market forecast, counterparty information and behavior	318
	14.3.1 Market forecast and pricing	318
	14.3.2 Behavioral shifts and counterparty information	320
14.4	Analysis elements	321
	14.4.1 Liquidity	321
	14.4.2 Value and income	325
	14.4.3 FTP	330
	14.4.4 Limits, sensitivity and risk	332
15	Life Insurance	335
15.1	Chart of account	335
15.2	The life contract	337
	15.2.1 Gross and net premiums	338
	15.2.2 Cost	338
	15.2.3 Risk premium and mortality tables	339
	15.2.4 Reserve building	340
	15.2.5 Surrender and surrender value	342
	15.2.6 Zillmer reserves	342
	15.2.7 Survival or retirement benefit	343
15.3	Forecasting new production	344
	15.3.1 Volume, characteristics and pricing	344
	15.3.2 Behavior	345
	15.3.3 Cost	346
	15.3.4 Balancing and liquidity	346
15.4	Analysis elements	347
	15.4.1 Solvency II internal models	347
	15.4.2 Balance sheet and P&L forecast	348
	15.4.3 Economic value	349

16 Non-life Insurance	353
16.1 Chart of account	353
16.2 The non-life contract	355
16.2.1 Premium	355
16.2.2 Receivables	356
16.2.3 Claim patterns	356
16.2.4 IBNRs and reserving risk	358
16.3 The reinsurance contract	359
16.3.1 Different types of reinsurance	359
16.3.2 Selecting the ceded primary contracts	360
16.4 Forecasting new volume and characteristics	361
16.4.1 Premium written, pricing and characteristics	361
16.4.2 Claims and IBNR	362
16.4.3 Reinsurance and liquidity	363
16.4.4 Cost	364
16.5 Analysis elements	364
16.5.1 Value and income	365
16.5.2 Solvency II internal model	367
17 Nonfinancials	369
17.1 Financial and nonfinancial corporates	371
17.1.1 Cash and goods	371
17.1.2 Financial contracts in the nonfinancial world	373
17.1.3 The financial side of nonfinancials	374
17.1.4 Industries that can be modeled	375
17.1.5 Government	375
17.2 The nonfinancial model	376
17.2.1 Detail level of the meta model	376
17.2.2 Real production and cash flows	377
17.2.3 Balance sheet, OBS and P&L structure	378
17.2.4 Markets and risk factors	380
17.2.5 Relationship between risk factors, production, BS and P&L	380
17.3 Analysis elements	383
17.3.1 Static analysis	383
17.3.2 Dynamic analysis	384
17.4 Corporate valuation	387
17.4.1 Going-concern valuation	387
17.4.2 Nonoperating financial assets and market value of debt	390
17.4.3 Net operating free cash flow	391
17.4.4 Terminal and growth value	392
17.4.5 Weighted average cost of capital	394
17.4.6 Practical example of corporate valuation	396

PART V	OUTLOOK AND CONCLUSIONS	397
18	The Financial Laboratory	401
18.1	Risk and performance measurements	401
18.1.1	Nonrisk ratios	401
18.1.2	Risk ratios	403
18.2	Example of an economic risk report	405
18.2.1	Income and expense	405
18.2.2	Capital	406
18.2.3	Return	408
18.2.4	Conclusion	408
18.3	Optimization	408
18.3.1	Static optimization	408
18.3.2	Dynamic optimization	410
18.4	Consistency	411
19	Towards a Unified Financial Language	413
19.1	The need for a unified financial language	413
19.1.1	Why more information?	413
19.1.2	Exemplifying the lemon problem	414
19.1.3	The power of a unified financial language	417
19.2	Structure of a unified financial language	417
19.2.1	Contracts	417
19.2.2	Risk factors	419
19.2.3	Counterparty information	419
19.2.4	Behavior parameters	420
19.2.5	Contract level information and aggregation	421
19.3	New finance, new regulation	421
Index		423
