Contents

Preface **xiii**

List of Acronyms **xv**

1 Related Work and Preliminary Considerations **1**
1.1 Introduction . . . 1
1.2 Related Work . . . 2
1.2.1 A Routing-Based Approach . . . 2
1.2.2 An Information-Theoretic Approach . . . 3
1.2.3 A Dynamic Control Approach . . . 4
1.2.4 A Game-Theoretic Approach . . . 4
1.3 A New Perspective for the Design of Ad Hoc Wireless Networks . . . 5
1.4 Overview of the Underlying Assumptions in the Following Chapters . . . 9
1.5 The Main Philosophy Behind the Book . . . 11

2 A Communication-Theoretic Framework for Multi-hop Ad Hoc Wireless Networks: Ideal Scenario **15**
2.1 Introduction . . . 15
2.2 Preliminaries . . . 16
2.2.1 Topology . . . 16
2.2.2 Route Discovery . . . 17
2.2.3 Average Number of Hops . . . 18
2.3 Communication-Theoretic Basics . . . 18
2.3.1 Bit Error Rate at the End of a Multi-hop Route . . . 18
2.3.2 Link Signal-to-Noise Ratio . . . 20
2.4 BER Performance Analysis . . . 23
2.4.1 Uncoded Transmission . . . 23
2.4.2 Coded Transmission . . . 27
2.5 Network Behavior . . . 29
2.5.1 Minimum Spatial Energy Density and Minimum Transmit Power for Full Connectivity . . . 30
2.5.2 Connectivity: Average Sustainable Number of Hops . . . 34
2.5.3 Lifetime of a Node . . . 40
2.6 Concluding Remarks . . . 41

http://www.pbookshop.com

3 A Communication-Theoretic Framework for Multi-hop Ad Hoc Wireless Networks: Realistic Scenario 43
3.1 Introduction . . . 43
3.2 Preliminaries . . . 44
3.3 Communication-Theoretic Basics . . . 46
3.4 Inter-node Interference . . . 48
3.4.1 Geometric Considerations . . . 48
3.4.2 Traffic Model . . . 49
3.5 RESGO MAC Protocol . . . 50
3.5.1 Scenario with Strong LOS and Interference from Nodes in Tier 1 . . . 50
3.5.2 Scenario with Strong LOS and Interference from Nodes in Tiers 1 and 2 . . . 57
3.5.3 Scenario with Strong Multipath (Rayleigh Fading) . . . 58
3.5.4 Discussion . . . 63
3.6 RESLIGO MAC Protocol . . . 64
3.6.1 Scenario with Strong LOS . . . 66
3.6.2 Scenario with Strong Multipath (Rayleigh Fading) . . . 69
3.6.3 Discussion . . . 72
3.7 Network Behavior . . . 73
3.7.1 Minimum Spatial Energy Density and Minimum Transmit Power for Full Connectivity . . . 73
3.7.2 Scenario with Strong LOS . . . 73
3.7.3 Scenario with Strong Multipath (Rayleigh Fading) . . . 75
3.7.4 Connectivity: Average Sustainable Number of Hops . . . 78
3.8 Conclusions . . . 83

4 Connectivity in Ad Hoc Wireless Networks: A Physical Layer Perspective 85
4.1 Introduction . . . 85
4.2 Quasi-regular Topology . . . 86
4.2.1 A Formal Definition of Quasi-regular Topology . . . 87
4.2.2 A Communication-Theoretic Approach . . . 88
4.2.3 What Happens if Each Node has Two Spatial Neighbors? . . . 93
4.2.4 What Happens if There is Inter-node Interference? . . . 96
4.3 Random Topology . . . 100
4.3.1 Related Work . . . 100
4.3.2 Connectivity in Ad Hoc Wireless Networks with Random Topology 102
4.3.3 Evaluation of the Likelihood of Broadcast Percolation . . . 104
4.3.4 What Happens if There is Inter-node Interference? . . . 108
4.4 Concluding Remarks and Discussion . . . 109

5 Effective Transport Capacity in Ad Hoc Wireless Networks 111
5.1 Introduction . . . 111
5.2 Model and Assumptions . . . 113
5.3 Preliminaries . . . 115
5.3.1 Route Bit Error Rate . . . 115
5.3.2 Link Signal-to-Noise Ratio . . . 115
5.3.3 Average Sustainable Number of Hops . . . 117
5.4 Single-Route Effective Transport Capacity . . . 117

http://www.pbookshop.com

5.5 Aggregate Effective Transport Capacity . . . 120
5.5.1 Ideal (no INI) Case . . . 121
5.5.2 Realistic (INI) Case: RESGO MAC Protocol . . . 123
5.5.3 Realistic (INI) Case: RESLIGO MAC Protocol . . . 128
5.6 Comparison of the RESGO and RESLIGO MAC Protocols . . . 131
5.7 Spread-RESGO: Improved RESGO MAC Protocol with Per-route Spreading Codes . . . 134
5.8 Discussion . . . 138
5.9 Concluding Remarks . . . 141

6 Impact of Mobility on the Performance of Multi-hop Ad Hoc Wireless Networks 143
6.1 Introduction . . . 143
6.2 Preliminaries . . . 144
6.2.1 Ideal (no INI) Case . . . 147
6.2.2 Realistic (INI) Case . . . 147
6.3 Switching Models . . . 149
6.3.1 Opportunistic Non-reservation-Based Switching . . . 149
6.3.2 Reservation-Based Switching . . . 150
6.4 Mobility Models . . . 150
6.4.1 Direction-Persistent Mobility Model . . . 150
6.4.2 Direction-Non-persistent (DNP) Mobility Model . . . 155
6.5 Numerical Results . . . 157
6.5.1 Direction-Persistent Mobility Model . . . 157
6.5.2 Direction-Non-persistent Mobility Model . . . 161
6.6 Conclusions . . . 163

7 Route Reservation in Ad Hoc Wireless Networks 167
7.1 Introduction . . . 167
7.2 Related Work . . . 168
7.3 Network Models and Assumptions . . . 169
7.3.1 Network Topology . . . 169
7.3.2 Typical Routes . . . 170
7.3.3 Bit Error Rate at the End of a Multi-hop Route . . . 170
7.3.4 Retransmission Model . . . 172
7.3.5 Mobility . . . 172
7.4 The Two Switching Schemes . . . 173
7.4.1 Reservation-Based Switching . . . 173
7.4.2 Non-reservation-Based Switching . . . 175
7.5 Analysis of the Two Switching Techniques . . . 176
7.5.1 Reservation-Based Switching . . . 176
7.5.2 Non-reservation-Based Switching . . . 179
7.6 Results and Discussion . . . 182
7.6.1 Switching Scheme and Traffic Load . . . 182
7.6.2 Effects of Interference . . . 183
7.6.3 Effects of the Number of Simultaneously Active Disjoint Routes . . . 188
7.6.4 Effects of Node Spatial Density . . . 189

http://www.pbookshop.com

7.6.5 Effects of Mobility . . . 191
7.6.6 Implications on Practical Scenarios . . . 192
7.7 Concluding Remarks . . . 193

8 Optimal Common Transmit Power for Ad Hoc Wireless Networks 195
8.1 Introduction . . . 195
8.2 Model and Assumptions . . . 196
8.2.1 Network Topology . . . 196
8.2.2 Routing . . . 197
8.2.3 Medium Access Control Protocol . . . 199
8.3 Connectivity . . . 199
8.3.1 Square Grid Topology . . . 200
8.3.2 Two-Dimensional Poisson Topology . . . 201
8.4 BER at the End of a Multi-hop Route . . . 202
8.4.1 Square Grid Topology . . . 202
8.4.2 Random Topology . . . 204
8.5 Optimal Common Transmit Power . . . 204
8.5.1 Optimal Common Transmit Power for Networks with Square Grid Topology . . . 204
8.5.2 Optimal Common Transmit Power for Networks with Random Topology . . . 205
8.6 Performance Metrics . . . 205
8.6.1 Node and Network Lifetime . . . 205
8.6.2 Effective Transport Capacity . . . 206
8.7 Results and Discussion . . . 208
8.7.1 Optimal Transmit Power and Data Rate . . . 208
8.7.2 Optimal Transmit Power and Node Spatial Density . . . 210
8.7.3 Effects of Strong Propagation Path Loss . . . 211
8.7.4 Connectivity Robustness to Node Spatial Density Changes . . . 213
8.7.5 Practical Determination of the Optimal Transmit Power . . . 215
8.8 Related Work . . . 216
8.9 Conclusions . . . 217

9 The Routing Problem in Ad Hoc Wireless Networks: A Cross-Layer Perspective 219
9.1 Introduction . . . 219
9.2 Experimental Evidence . . . 220
9.3 Preliminaries: Analytical Models and Assumptions . . . 221
9.3.1 Physical Layer . . . 221
9.3.2 Medium Access Control . . . 225
9.3.3 Basic Networking Assumptions . . . 226
9.4 Route Selection: Simulation Study . . . 227
9.4.1 Network Topology . . . 227
9.4.2 BER-Based Routing versus Shortest-Path Routing . . . 227
9.5 Network Performance Evaluation . . . 235
9.5.1 Average Hop Length Models . . . 235
9.5.2 Retransmission Model . . . 239

http://www.pbookshop.com

9.5.3 Packet Error Rate . . . 239
9.5.4 Delay . . . 240
9.6 Discussion . . . 243
9.6.1 Cross-layer Routing: A Practical Perspective . . . 243
9.6.2 Mobility . . . 246
9.7 Related Work . . . 246
9.8 Conclusions . . . 248

10 Concluding Remarks 249
10.1 Introduction . . . 249
10.2 Extensions of the Theoretical Framework: Open Problems . . . 249
10.2.1 Performance of Ad Hoc Wireless Networks: Random Versus Uniform Topologies . . . 249
10.2.2 Impact of Clustering on the BER Performance in Ad Hoc Wireless Networks . . . 251
10.2.3 Impact of Receiver Sensitivity on the Performance of Ad Hoc Wireless Networks . . . 253
10.2.4 Spectral Efficiency–Connectivity Tradeoff in Ad Hoc Wireless Networks . . . 254
10.2.5 MIMO-OFDM Wireless Communications . . . 256
10.2.6 Smart Antennas and Directional Antennas . . . 256
10.3 Network Architectures . . . 256
10.4 Network Application Architectures . . . 257
10.5 Standards . . . 258
10.6 Applications . . . 263
10.7 Conclusions . . . 264

Appendix A Analysis of the Inter-node Interference 265
A.1 Introduction . . . 265
A.2 Exact Computation of the Average Link BER in a Scenario with Strong LOS 265
A.2.1 Interference from Nodes in Tier 1 . . . 266
A.2.2 Interference from Nodes in Tiers 1 and 2 . . . 271
A.2.3 Interference from Nodes in Tier 2 . . . 273
A.2.4 Simulation Scenario . . . 274
A.3 Exact Computation of the Average Link BER in a Scenario with Strong Multipath (Rayleigh Fading) . . . 276
A.3.1 Interference from Nodes in Tier 1 . . . 277
A.3.2 Interference from Nodes in Tiers 1 and 2 . . . 278
A.3.3 Interference from Nodes in Tiers 1, 2 and 3 . . . 278
A.4 LOS and Multipath (Rice Fading) . . . 280
A.5 Gaussian Assumption for the Interference Noise . . . 280
A.5.1 Route Bit Error Rate . . . 282
A.5.2 Interference Power . . . 284

Appendix B Proof of Theorem 1, Chapter 5 287

Appendix C Route Discovery 293

http://www.pbookshop.com

Appendix D Validation of Analytical Results **295**
D.1 Validation of Network Goodput 295
D.2 Validation of Delay 295
D.3 Validation of Average Number of Simultaneously Active Routes 297

Appendix E Derivation of Joint CDF of W and Φ **299**
