

## Index

### A

- active alphas, 139–140, 187–199, 254–255
  - allocation alphas, comparison with, 190–191
  - bound-active alphas, 192
  - characteristics, 193
  - expanding sources of, 196–197
  - integration, 192–194
  - overweighting, 206–207
  - versus passive alphas, 201–202
  - portable alphas, 191
  - without reweighting, 206, 207
- active weightings effect, 203
- allocation
  - across the frontier, 63
  - dual-alpha, 115–116
  - process, 47
  - and stress beta, 227, 267
- allocation alphas, 180–181, 187–189, 201
  - active alphas, comparison with, 190–191
  - integration, 192–194
- alpha and beta returns, 276–279
- alpha-based volatility, 77, 102
- alpha-beta framework, 47, 49, 68, 95–98, 201, 203, 206
  - components, 188
  - frontiers, 122
- alpha core, 16, 47, 49–51, 52, 68, 69, 187, 312–314, 321
  - analysis, 86–90
  - building, 103, 119
  - decay and beta domination, 144–145
  - expansion of, 101–117, 109–112, 117
  - fixed, 51, 53, 54
    - and efficient frontiers, 154–155
  - generality of, 54–56
  - increasing the percentage of, 125–129
  - maximum exposure limits, 116
  - structure of, 77
  - varying the parameters, 56–58
- alpha effect, 82, 93–95
- alpha independence, 69–71
- alpha return effect, 56
- alpha space, efficient frontier in, 120–125, 189
- alpha uplift model, 65, 90, 91
- alpha volatility, 122
- alpha volatility effect, 56, 57
- alphas
  - diversification, 253–254
  - dual active-allocation, 115–116
  - sequential erosion, 150
- alternative assets, 3, 322
  - inherent constraints on, 101–102
  - and investment manager relationship, 4
  - and societal efficient frontier, 135–136
- annualized efficient frontiers, 164
- annualized expected returns, 154
- Asness, Cliff, 39–40

- asset allocation, 20, 68
  - college and university endowment, 4
  - modern, 8–12, 27–28
  - and return thresholds, 297–319
  - traditional, 9–10, 27, 37
- asset classes, 187, 227
  - adding new, 207–208, 209
  - beta pathways for, 266–267
  - characteristics, 105
  - constraints, 106, 120, 189
  - inclusion and risk mitigation, 67–68
  - return components of, 22–23
  - risk components of, 23–26
  - Sharpe ratios, 145, 147
  - weighting, 201
- asset level and stress betas, 263–264
- asset values, 174, 175, 178
- asset weights, 63
  
- B**
- Bayesian estimation, 19
- benchmark policy portfolio, 203
- benchmark return, 201, 202, 203
- Bernstein, Peter L., 5, 39
- beta, 7, 77. *See also* stress betas
  - defined, 13–14
  - high versus low, 81, 82, 85, 86, 87
  - historically, 285, 287–289
  - as key risk factor, 33
  - minimum and maximum, for return targets, 302–304
  - moving beyond, 113–115
  - normal correlation-based, 242–243
  - reduction effects, 247
  - regimes, 309–310
  - sensitivity, 12
  - shifts, 231, 235–238
    - and tighter correlations, 33, 34, 239
  - beta-based alpha, 15
  - beta-based and alpha returns, 289–290
  - beta-based asset allocation, 35–223
  - beta-based performance analysis, 201–211
  - beta-based risk and return, 12–16, 119, 235, 271–272
  - beta domination, 143, 194
    - and alpha decay, 144–145
    - and constrained alternatives, 144
  - beta gaps, 205, 208, 210, 211
  - beta line, 15, 16, 21
  - beta neutralization, 208–209, 210
  - beta pathways, for individual asset classes, 266–267
  - beta-plus volatility approximation, 71–72
  - beta reduction, 251
  - beta response curves, 243–244
  - beta sensitivity, 19
  - beyond-beta alpha, 7
  - black box, 19–20
  - bond bridge, 60–61
  - bond-cash frontier, 135
  - bond-relative alphas and betas, 78–83
  - bonds, as risk-free base, 77–99
  - bound-active alphas, 187, 192, 202
  
- C**
- Capital Asset Pricing Model (CAPM), 8, 12
- cash and U.S. bonds as alternative baseline, 77
- cash-core line, 103
- cash-equity line, 47, 56, 57, 58, 59, 60, 61, 64–65, 69

- cash line segment, 58–60
- channel risk, 66–67, 68, 69
- characteristic probability, 304–306
- conditional VAR, 19
- constrained alpha frontiers, 110, 120, 134, 137, 144
- constraint, shortfall, 167–168
- core beta effect, 56, 57
- core weight effect, 58
- correlation tightening, 245, 268–269
  - effect on asset beta, 263
  - and residual volatility, 260
  - under stress, 240–241
  - and stress betas, 227–238
- correlations, with U.S. equity, 284–285
- CPI levels, 218–219
- D**
- de-risking and re-risking, 251–253
- derivatives, 202, 235
- divergence under stress, 241
- diversification, 5, 7, 257, 271, 297, 322
  - and the alpha core, 50
  - effect, 57–58
  - extending into dragon risk, 40, 45–46
  - and modern portfolios, 19
  - nature of, 37–39
  - paradox and total betas, 136, 235, 239
  - performance, 281–293
  - potential costs, 45
  - short-term vulnerability, 264–266
  - simplistic model of, 40–44
    - in sources of return, 44–45
- diversification alphas, 253–254
- dividend discount model (DDM), 215–216
- double alphas and portability, 255
- dragon risk, 9, 37–46
  - and the alpha core, 49, 136–137
  - defined, 39–40
  - versus overdiversification, 45–46
- dual active-allocation alphas, 115–116
- E**
- efficient frontier, 38, 47, 48, 51, 69
  - alpha-driven, 119–129
  - in alpha space, 120–135
  - analysis, 90–93
  - annualized, 164
  - bond-cash, 135
  - with bonds, 77–99
  - cash-core line, 103
  - equity extension, 103
  - with fixed alpha core, 72–75, 154–155
  - fixed-core segment, 103
  - and maximum-return alpha cores, 104–107
  - optimal, 129
  - with the shortfall line, 160, 162
  - and shortfall probabilities, 181–182
  - and shortfall risk, 153–171
  - slopes along the, 63–64, 69
  - societal, 134–136, 137–139, 151–152
  - societal gaps and opportunities, 140–141
  - standard, 131–132
  - swing asset, 132–134
  - three-segment, 62–63
  - uplift model, 64–66
- emerging market equity (EME), 257–258
- emerging market return, 227–228
- endowment allocation model, 3–17, 27–28, 37

- endowment model, 271–279, 297, 322
- equilibration, 143–152
- equities
  - as dominant risk factor, 7
  - value of, 217
- equity-and-bond portfolios, 5
- equity durations
  - defined, 214
