usage, 301–309, 310–313
- Scenario interest rate path, present value (calculation), 251–254
- Scenarios, total return analysis (usage), 301–313
- Scheduled amortization, 202
- Scheduled bond (SCH bond), 262
- Scheduled plus projected prepayments, 299
- Scheduled principal repayment, 200, 202
calculation, 202–205
equation, 204–205
example, 215
- Sector selection, 400
- Securities
arbitrage-free value, provision, 172–173
cash flow, 17
package, 1
rate shocks, 342
- Securitized loans, 199
- Security Information, bond 30/360 day count, 69–70
- Semiannual cash flows, usage, 23e
- Semiannual coupon
payment, 93
percentage, 74
- Semiannual coupon-paying bond, valuation, 81
- Semiannual discount rate, 80
- Semiannual-pay bonds, 288
- Semiannual rate interest rate, usage, 23–24
- Semiannual total after-tax return to maturity, 299
- Semiannual total return, computation, 288
- Semiannual total return to maturity, 291, 294
- Semiannual yield
annualization, 116
doubling, 117
- Semiannual yield to maturity, 118
- Senior-subordinated structure, usage, 235–239
- Senior tranches, 236
- Separately traded, registered interest and principal securities (STRIPS), 38–39
Actual/Actual, usage, 65
- Sequential pay tranches, 222–226
- Servicing fee, cash flow (relationship), 205
- Servicing spread, 205
- Settlement date, 159
impact, 91
- Shifting interest
mechanisms, 237–238
percentage schedule, 237

- Short maturity issue, 305
- Short rate, Federal Reserve Board, 57
- Short-term forward rates
 - curve, 50e
 - spot rates, relationship, 50–52
- Simple margin, 158
- Simulated cash flow, 253e
- Simulated paths, 252e, 254e
- Simulation, usage, 250–251, 302
- Single cash flow
 - future value, 1–3, 8–9
 - present value, 4–7
 - employment, 14
 - periodic interest rates, usage, 9–10
 - seasoned months, 215
- Single-monthly mortality rate (SMM), 208–212
 - prepayments, expression, 240
- Single-name CDS, 411
- Six-month forward rates
 - derivation, 45–50
 - formula, 49
 - short-term forward rate curve, 50e
- Soft calls, 279
- Sovereign credit risk, differences, 402
- Spot curve
 - bootstrapping, 37–44
 - key rate shift, 355e
 - par curve, contrast, 44e
 - shift, 354–356
- Spot rates, 33, 40–43. *See also* Theoretical spot rates
 - change, key rate change (impact), 353e
 - curve, 352
 - yield spread measures, relationship, 134–137
 - example, 54, 176e
 - short-term forward rates, comparison, 50–52
 - solution, 41–42
 - usage, 354e
- Spread duration
 - change, 351
 - usage, 350–351
- Spread for life, 157, 158–159
- Spread measure, 351
- Standard deviation, 451
 - annualization, 452–454
 - interpretation, 454–455
 - volatility, relationship, 179–181
- Static cash flow yield analysis, 247–249
- Static spread, 135
- Step-down note, 196
- Stepped spread floaters, 145–146
- Step-up note, 196
- Stock price
 - level, 279
 - risk, hedging, 282–283
 - volatility, 279
- Stress testing, 321, 382–383
- Stripped MBS, 238
- Stripped securities, 34
- Structured notes, 142
- Subordinated tranches, 236
- Subordination interest, 237
- Subordination level, 237
- Subprime deals, 235
- Subprime loans, 235
- Support tranches, 234–235
- Swap position
 - institutional investor entry, 418–419
 - interpretation, 419–421
- Swap rates, 401–402, 418
 - calculation, 430–431
 - determination, 434–436
 - example, 441e
 - fixed rate payments, 430e
 - formula, denominator (calculation), 436e
- Swaps
 - counterparties, description, 422e
 - dollar duration, 445–447
 - economic interpretation, 416
 - inception, 424
 - investor usage, 445
 - package, 443
 - payments, computation, 424–425
 - valuation, 436–440
 - example, 439e
- Swap spreads
 - determination, 442–443
 - level, factors, 444–445
 - primary determinants, 440–445
 - time series plot, 442e
- Swaptions, 456–457
 - strike rate, 456–457
- Tangent line, estimation, 338–340
- Taxation, adverse effects, 296–297
- Tennessee Valley Authority, linkers, 387
- Ten-year Treasury note, Bloomberg Security Display, 65e
- Theoretical spot rates, 34–44
- Theoretical value
 - determination, 254–255
 - volatility, relationship, 191–192
- 30/360, 68–71
 - Actual/Actual, contrast, 71–74
- 30/360 day count
 - assumption, 69
 - convention, 69–70
 - examples, 74e
 - increase, 71
 - rule, usage, 70
 - usage, 73
- Three-bond portfolio, 127
 - cash flows, example, 126e
 - duration dollars, example, 128e
- 360-day year, importance, 67–68
- 300 PSA, 209, 234
 - graphical depiction, 210e
- Ticks, price change, 36
- Tiered payment mortgages, 200

- Time horizon, 381
- Total adjusted margin, 161
- Total after-tax coupon payments, 297
- Total after-tax income, calculation, 297
- Total after-tax return to maturity, calculation, 298
- Total cash payments, receipt, 16
- Total coupon payments, 298
 - computation, 287–288, 290
- Total dollar contribution, taxes (impact), 296–298
- Total dollar return, 118
 - partitioning, 119
- Total future dollars, 118
 - generation, 293
- Total future dollars after taxes, reinvestment rate, 298–299
- Total monthly mortgage payment, 215
- Total monthly return, 301
- Total present value, computation, 22
- Total pretax coupon payments, 297
- Total principal payment, 216
- Total return, 287
 - analysis, usage, 302, 304
 - assumption, 302
 - calculation, graphical depiction, 289e
 - computation, 287–290
 - example, 313e
 - pattern, 295
- Total return to maturity, 291–299
- Trade date, 421
- Trades (evaluation), scenario analysis (usage), 302–309
- Traditional yield measures, 113–121
- Tranches, 221–222
 - expected final maturity, 227
 - monthly cash flow, 228e
 - OAS, sharing inequality, 259
 - option cost, reduction, 262
 - payment, 226
 - principal pay down window, 226
 - sequential pay structure, 223e
 - accrual bond class, inclusion, 227e
 - floater/inverse floater/accrual bond classes, inclusion, 229e
 - total interest payment, 230–231
- Treasury coupon security, 247–248
- Treasury Inflation Protected Securities (TIPS), 78, 147, 387–388
 - Bloomberg Security Description Screen, example, 389e
 - Bloomberg Yield Analysis Screen, example, 391e
 - duration, measurement, 395
 - empirical duration, estimation, 396e
 - index ratios, 391e
 - inflation compensation derivation, increase, 388
 - positions, 394–395
 - price, change, 395
 - valuation, 389–394
- Treasury on-the-run issues, benchmark usage, 194
- Treasury par curves, off-the-run (usage), 37e
- Treasury par yield curve, example, 38e
- Treasury spot rates, usage, 96–97
 - reasons, 97–98
- Treasury valuation, price, 100e, 103e
- Treasury yield curve, 33
 - shape, 17–18
 - spread, 265
- Trinomial lattice models (trinomial models), 174
- Undated floater, 148
- Undiversified VaR measure, usage, 377–378
- Upper PSA prepayment assumption, 232
- U.S. investor, cash payments receipt, 5
- U.S. Treasury bills
 - Bloomberg Security Display, 66e
 - yield annualization, 68
 - yield measures, 128–134
- U.S. Treasury bonds
 - Bloomberg Yield Analysis Screen, example, 320e
 - portfolio, example, 348e
 - priced to yield, 360–361
- U.S. Treasury curves, 400–403
- U.S. Treasury notes
 - Actual/Actual (usage), 65
 - auction, 146–147
 - Bloomberg Security Description Screen, example, 110e, 292e
 - Bloomberg Security Display, 65e
 - Bloomberg Total Return Analysis Screen, examples, 295e, 296e
 - Bloomberg Yield Analysis Screen, examples, 111e, 293e, 320e, 366e
 - empirical duration, estimation, 396e
 - maturity, 91–92
 - strips portfolio valuation, 104e
- U.S. Treasury principal strip, 305
- U.S. Treasury securities
 - cash flows, 95e
 - duration estimate, 341
 - portfolio, Bloomberg screen (example), 378e
 - valuation approaches, comparison, 97e
- U.S. Treasury strips, 39, 98
 - curve, 40e
- U.S. Treasury yield curve, 401
- U.S. Treasury yields
 - change, absence, 350
 - level/slope/curvature, 444
 - noise, 401–402
- Valuation
 - traditional approach, 94–95
- Valuation, principles, 77–80
- Value, portfolio manager addition, 399–400
- Value-at-risk (VaR), 369, 373–383
 - calculation method, 374–381
 - extensions, 373
 - graphical depiction, 374e
 - implementation, issues, 381–383

- measure, 373, 374
- Variance, equation, 459, 460
- Variance/covariance, 374–380
 - method, advantages/disadvantages, 379–380
- Volatility
 - assumption, 250–251
 - increase, impact, 266
 - measurement, 179–180
 - reduction, 261–262
 - standard deviation, relationship, 179–180
 - term structure, 58–59
 - theoretical value, relationship, 191–192
- VOL function, Bloomberg screen, 58e
- Voluntary prepayments, 251

- Wal-Mart, asset swap spread (Bloomberg screens), 407e, 408e
- Weighted average coupon (WAC), 207
 - percentage, 232
 - rate, 207, 213
- Weighted average life, 221
- Weighted average maturity (WAM), 207, 239
 - duration, 212, 213, 222, 232
- Weighted average method, 460–461
- When-issued bills (WIB), 130–131
- When-issued notes, 35

- Yield curve
 - analysis, 33
 - dynamics, 57–59
 - environments, increase, 310
 - flattening, 383, 400
 - maturity sector, cheapness (perception), 304–305
 - parallel shift, 58
 - scenario, 312e
