

Index

- Acceptance regions, 228–33
Alternative hypothesis, 227–39, 321–5
Approximations for non-linear VaR, 186–90
AR *see* auto-regressive processes
ARCH (autoregressive conditional heteroscedasticity), 258–70
ARMA (autoregressive moving average), 203–5, 267–8
Asymmetric GARCH, 270
Auto-correlation, 204–5, 243–4, 247–54, 262–4, 267–8
Auto-covariance, 198, 200–5
Auto-regressive process (AR), 201–5, 258–70
- Backtesting, 9, 319–25
 Christoffersen's testing methodology, 9, 320–5
 performance-quantification issues, 319–20, 325
 VaR exceptions, 320–2, 325–5
Basel committee, 4–6, 319–20
Bernoulli trials, 320
Beta, 96–9, 101–5
Black–Scholes option pricing model, 6, 169–84
Box–Muller transform, 303–5
- Calculus, 31–2, 34, 43–61, 145–9, 304–7
Capital adequacy requirements, 4–5, 9, 117, 121–9, 271–2, 319
Capital Asset Pricing Model (CAPM), 3, 85–6, 91–9, 101–5
 risk-decomposition properties, 97–9, 104–5
Capital Market Line (CML), 95–9
Cauchy distribution, 276–7, 279
Cauchy–Schwarz inequality, 72–5, 214–16
Central limit theorem (CLT), 145–7, 217–25, 271–8
- Central moments of a distribution, 137–40, 154
Characteristic function, 140–9, 155–67, 194–5
Chi-squared distribution, 154–6, 237–8, 322, 325
Choleski decomposition, 25, 71–5, 299–307
Coefficient of determination, 58–60
Coherent risk measures, 124–9, 135
Compound hypothesis, 228
Conditional density function, 35, 283–6
Conditional volatility, 244, 252–3, 255–70
 functions, 50–2, 71–5, 87–9
Continuous random variables, 28–31, 33–41, 43–6, 137–49, 172–84
Cornish–Fisher theorem, 316–17
Covariance, 35–9, 40–1, 59–61, 68–75, 78–89, 97–9, 103–16, 146–7, 167, 190–5, 197–8, 200–1, 217–25, 299–307
- Delta, 179–84, 186–95, 217–25
 see also gamma
Delta method for statistical estimates, 217–25
 VaR, 5–6, 185–95
Determinant of a matrix, 23–4
Differentiation, 34, 43–61, 120–1, 122–9, 133–5, 140–4, 155–60, 170–84, 214–16, 217–18, 287–9, 291–307
 see also partial differential equations
Dimension of a vector, 11–12
Dirac delta function, 128–9
Discrete random variables, 27–31
Distribution functions, 5–6, 28–31, 33–41, 64–7, 120, 128–9, 131–5, 137–49, 151–67, 235–6, 237–8, 241–54, 271–89, 291–307, 309–17, 322–5
Diversification, specific risk, 99, 105
Domains of attraction, EVT, 278–83

- Economic drivers, risk factor models, 105–16
- Edgeworth expansion, 315–17
- Efficient portfolios, 78–89, 91–9, 101–5
- Eigenvalues and Eigenvectors, 21–5, 57–61, 109–16
- Empirical distribution, 291–307
- Empirical plots, 243, 247–54, 284–6, 291–307
- Euclidean norm, 58–9
- Euler's theorem, 123–4
- EVT *see* extreme value theory
- Expectation, 31–3, 36–9, 52, 63–75, 77–89, 102–16, 178–9, 262–3
see also mean
- Expected shortfall *see* Tail Value at Risk
- Exponential GARCH, 269–70
- Exponentially weighted moving average, 257–8
- Extremal distributions, 279–80
- Extreme Value at Risk, 283–6
- Extreme value theory (EVT), 8, 271–89, 298, 311–13
- F*-distribution, 161–5, 304
- Fisher information, 214–15
- Fisher–Tipper theorem, 277–8
- Fréchet density function, 281–3
- Fréchet distribution, 277–83
- FTSE-100 index, 244–54
- Fundamental theorem of calculus, definition, 31
- Gamma, 179–84, 189–95
see also delta
- Gamma distribution, 151–60
- GARCH volatility model, 7–8, 264–70, 307
- General factor modelling, 101–2
- Generalized likelihood ratios, 237–9, 322, 324–5
- Geometric series, 202–3
- Geometry of the optimal frontier, 80–3
- Gil-Pelaez formula, 141–2, 195
- GJR-GARCH volatility model, 270
- Global minimum, definition, 47–50
- Greeks *see* sensitivity analysis
- Gumbel distribution, 277–83
- Hedge funds, 101
- Hedging, concepts, 117, 180–4
- Hermite polynomials, 314–17
- Hessian matrix, 210–11
- Hill estimator, 287
- Historical simulation, 8–9, 296–9
- Hyperbola, geometry, 81–2, 91–9, 158–60
- Hypothesis testing, 7, 9, 227–39, 245–7, 319–25
see also backtesting
- Idiosyncratic risk *see* specific risk
- Independence, 34–5, 144–7, 198–9, 217–25, 269–70, 272–8, 297–8, 304–7, 323–5
- Inner and outer product of two vectors, 14–15, 103–5
- Innovation process, 255
- Interest rates, 4–5, 105, 122, 319
- Ito's formula, 173–4
- Jacobian, 162
- Jarque–Bera test, 242–6
- Joint distribution function, definition, 33–4
- Joint probability density function, 34–9, 162–4, 207–16, 227–39, 299–307
definition, 34, 162–3
- Kurtosis, 139–40, 149, 154, 156, 166, 217, 221–5, 242–54, 255–70, 280–9, 302–17
analysis of, 223–5, 242–54, 311–17
application to financial losses, 242–54, 255–70
asymptotic properties of, 217, 221–5
- Lagrange function, 51, 70–5, 87–9, 112–13
- Least-squares solution, 50–1, 54–61
- Likelihood ratios, 230–3, 237–9, 321–2, 324–5
- Linear approximations, 44, 47–61, 185–95
- Linear regression, 54–61, 105–16, 201–5
- Linear systems, 18, 52–4, 70–5, 87–9, 169, 185–95
- Linearity issues, returns, 65–7
- Local approximations, 21, 218–25
see also quadratic forms
- Local maximum/minimum, 47–50
- Log losses, 245–54, 287–9, 296–307
- Log returns, 63–75, 118–29, 131–5, 245–54
- Log-likelihood function, 208–17, 286–9, 311–17, 321–5
- Log-normal distribution, 148–9, 174–84
- Long-period returns, 66–7
- MA *see* moving average process
- Maclaurin expansion, 147–8
- Magnitude of a vector, 14
- Marginal probability density function, 34, 35–9, 163–4

- Marginal Value at Risk (MVaR), 122–4, 132–5
- Market portfolio, 3, 85–6, 91–9, 101–5
- Maximum likelihood estimation (MLE), 207–16, 227, 238–9, 287–9, 311–17, 321–5
accuracy of statistical estimators, 211–15
appealing properties, 215–16, 311–12
concepts, 207–16, 227, 287–9, 311–17, 321–5
critique, 215–16, 311
definition, 207–8, 287–8, 321–2
hypothesis testing, 227, 238–9, 321–5
sample mean and variance, 209–15
- Mean, 31–3, 36–41, 58–61, 69–75, 77–89, 101–5, 117–29, 146–7, 149, 156–60, 166–7, 171–84, 200–5, 209–16, 217–19, 231–9, 241–54, 258–70, 305–7, 309–17
see also expectation
