# INDEX

- Absolute return, 252–253
- Accrual equivalent capital gains tax rate, 513–515
- Accumulation stage, 9, 26, 80–81
- Activities of daily living (ADLs), 133
- Adverse selection, 134
- After-tax performance improvement techniques,  
236–246, 282
- holding for long-term capital gains, 237–238
  - tax-lot management, 236–237
- After-tax performance measurement, 328,  
507–534
- AIMR-PPS algorithm, 510–511
- capital gains taxes, 512–513
- estate tax issues, 515–518
- individual federal tax rates, 511
- marginal income tax rates, 512
- questions and answers, 519–520, 532–534
- taxable benchmarks
- AIMR after-tax standards, 522–523
  - capital gain realization rate, 523–525
  - pretax benchmark conversion, 525–530
  - shadow portfolios, 529–530
  - standard benchmark rules, 521–522
- tax efficiency factors, 508–510
- unrealized capital gains, 513–515
- Aggregate shocks, 117–118
- Aging, of population, 137
- age distribution of 1992 taxable decedents, 516
  - probability of living to 100, 32
- AIMR-PPS standards, 251, 510–511, 518, 523
- Alternative asset classes, 223–224
- Alternative minimum tax, 227–228, 243,  
408–409, 511
- Annuities. *See also* specific annuity
- allocating money for, 142–143
  - fixed-payout, 60–61
  - immediate, 138
  - life care annuity, 133–136
  - longevity annuity, 137–148
  - longevity risk and lifetime-payout annuity,  
31–33
  - payout, 60
  - premiums, 135
  - variable lifetime, 22
  - variable payout, 61–62
- Arrow-Debreu prices, 110
- Asset allocation, 169–187
- after-tax, 475–482
  - adjusting for embedded gains/losses, 478
  - all retirement income sources, 476
  - asset location in after-tax framework, 482
  - calculating, 478
  - logic of, 476–478
  - passive investors, 479–480
  - sharing of principal/returns/risk, 478–481
- conventional use of CRRA utility, 171–174
- human capital
- asset allocation modeling and, 37–38, 84–87
  - risk considerations, 30, 33
  - role in asset allocation, 35–38
- implications for advisers, 44
- life insurance
- asset allocation model and, 87–91
  - financial resource allocation and, 33, 45–47
- longevity insurance and, 65–74
- longevity risk and, 62–64
- model asset allocation
- with lifetime-payout annuities, 68–69
  - numerical examples/casestudies, 59–73
  - with payout annuities, 67–68
- modifications for realistic situations, 180–181
- optimal, 36
- quantitative route to investor-specific advice,  
169–170

- Asset allocation (*Continued*)  
 reconciliation of methods, 179–180  
 shortfall-probability minimization, 174–179  
   eliminating risk-aversion parameter,  
   177–179  
   risk-aversion parameter assessment  
   problems, 175–177  
 taxable equivalent asset allocation, 451–453
- Asset location, 393  
 in after-tax framework, 482  
 borrowing constraints, 453–454  
 empirical evidence of investor behavior, 457  
 liquidity restraints, 456  
 municipal bonds, 454–455  
 between taxable and tax-deferred savings  
   accounts, 449–458  
 taxable equivalent asset allocation, 451–453  
 trading behavior, 455–456
- Assets, inflows *versus* withdrawals, 508
- Baby Boomer retirement, 25, 146
- Basis step-up, 513
- Bellman, Richard, 121
- Benartzi, Shlomo, 30
- Benchmarks  
 after-tax benchmark indices, 251  
 AIMR after-tax standards, 522–523  
 capital gain realization rate, 523–525  
 “dual benchmark” problem, 261  
 multiple managers or accounts and, 263  
 portfolio performance measurement, 251  
 pretax benchmark conversion  
   first level of approximation, 525–528, 531  
   second level of approximation,  
   528–529, 531  
   special problems, 529–530  
   third level of approximation, 529  
 questions and answers, 532–534  
 shadow portfolios, 529–530  
 standard rules, 521–522
