

Contents

Preface	ix
About the Editor	xiii
About the Contributors	xv
PART ONE	
Option Pricing and Volatility Modeling	
CHAPTER 1	
A Moment Approach to Static Arbitrage	3
<i>Alexandre d'Aspremont</i>	
1.1 Introduction	3
1.2 No-Arbitrage Conditions	7
1.3 Example	15
1.4 Conclusion	16
CHAPTER 2	
On Black-Scholes Implied Volatility at Extreme Strikes	19
<i>Shalom Benaim, Peter Friz, and Roger Lee</i>	
2.1 Introduction	19
2.2 The Moment Formula	20
2.3 Regular Variation and the Tail-Wing Formula	24
2.4 Related Results	27
2.5 Applications	33
2.6 CEV and SABR	35
CHAPTER 3	
Dynamic Properties of Smile Models	47
<i>Lorenzo Bergomi</i>	
3.1 Introduction	48
3.2 Some Standard Smile Models	50

vi	CONTENTS
3.3	A New Class of Models for Smile Dynamics 65
3.4	Pricing Examples 81
3.5	Conclusion 87
CHAPTER 4	
A Geometric Approach to the Asymptotics of Implied Volatility 89	
<i>Pierre Henry-Labordère</i>	
4.1	Volatility Asymptotics in Stochastic Volatility Models 91
4.2	Heat Kernel Expansion 92
4.3	Geometry of Complex Curves and Asymptotic Volatility 100
4.4	λ -SABR Model and Hyperbolic Geometry 106
4.5	SABR Model with $\beta = 0, 1$ 117
4.6	Conclusions and Future Work 122
4.7	Appendix A: Notions in Differential Geometry 122
4.8	Appendix B: Laplace Integrals in Many Dimensions 125
CHAPTER 5	
Pricing, Hedging, and Calibration in Jump-Diffusion Models 129	
<i>Peter Tankov and Ekaterina Voltchkova</i>	
5.1	Overview of Jump-Diffusion Models 131
5.2	Pricing European Options via Fourier Transform 137
5.3	Integro-differential Equations for Barrier and American Options 140
5.4	Hedging Jump Risk 147
5.5	Model Calibration 153
PART TWO	
Credit Risk	
CHAPTER 6	
Modeling Credit Risk 163	
<i>L. C. G. Rogers</i>	
6.1	What Is the Problem? 163
6.2	Hazard Rate Models 166
6.3	Structural Models 175
6.4	Some Nice Ideas 179
6.5	Conclusion 181

<i>Contents</i>	vii
CHAPTER 7	
An Overview of Factor Modeling for CDO Pricing	185
<i>Jean-Paul Laurent and Areski Cousin</i>	
7.1 Pricing of Portfolio Credit Derivatives	185
7.2 Factor Models for the Pricing of CDO Tranches	189
7.3 A Review of Factor Approaches to the Pricing of CDOs	198
7.4 Conclusion	212
CHAPTER 8	
Factor Distributions Implied by Quoted CDO Spreads	217
<i>Erik Schlögl and Lutz Schlögl</i>	
8.1 Introduction	217
8.2 Modeling	220
8.3 Examples	224
8.4 Conclusion	231
8.5 Appendix: Some Useful Results on Hermite Polynomials under Linear Coordinate Transforms	232
CHAPTER 9	
Pricing CDOs with a Smile: The Local Correlation Model	235
<i>Julien Turc and Philippe Very</i>	
9.1 The Local Correlation Model	236
9.2 Simplification under the Large Pool Assumption	240
9.3 Building the Local Correlation Function without the Large Pool Assumption	243
9.4 Pricing and Hedging with Local Correlation	247
CHAPTER 10	
Portfolio Credit Risk: Top-Down versus Bottom-Up Approaches	251
<i>Kay Giesecke</i>	
10.1 Introduction	251
10.2 Portfolio Credit Models	251
10.3 Information and Specification	253
10.4 Default Distribution	259
10.5 Calibration	264
10.6 Conclusion	265
CHAPTER 11	
Forward Equations for Portfolio Credit Derivatives	269
<i>Rama Cont and Ioana Savescu</i>	
11.1 Portfolio Credit Derivatives	270
11.2 Top-Down Models for CDO Pricing	273

viii	CONTENTS
11.3 Effective Default Intensity	275
11.4 A Forward Equation for CDO Pricing	278
11.5 Recovering Forward Default Intensities from Tranche Spreads	282
11.6 Conclusion	288
Index	295
