

# Index

- Abnormal returns:
  - matched portfolios, 74
  - one-to-one match samples, 75
  - stock price performance, estimation
    - methodology, 73–74
- Absolute risk aversion, storable commodity risk management, 134
- Action-based framework, supply chain risk management, 4–7
  - execution stage, 7
  - planning stage, 4–7
- Adaptive inventory strategy, supply chain risk detection, 84
- Additive independence property, storable commodity risk management, operational and financial hedging, 146
- Adverse selection problem, procurement contracts, 317–319
- AIC metric, score-based learning methods, 547–548
- Allocation flexibility:
  - risk pooling and, 35–36
  - tailored operational hedging, 43–45
- Ambiguity modeling in supply chains:
  - attitude characterization, 107–109
  - future research issues, 120–122
  - inventory positioning setting, 113–120
  - maximin expected utility:
    - inventory positioning, 115–120
  - models of, 107–108
  - origins of, 105–107
  - probability distribution
    - characterization, 107
  - single period newsvendor setting, 109–113
- Arbitrage, financial hedging and, 38
- Arbitrage, supply chain contract valuation and, 223–226
- Arithmetic Brownian Motion (ABM),
  - production risk, continuous time setting, spot market prices, 180–183
- Assembly/disassembly process, beef supply chain model, procurement risk, 466–470
- Asymmetric information, supply chain risk management, 394, 396, 413–419
  - nondelivery penalties, 418
  - quality control, 417–418
  - supplier/buyer backup production, 416
  - supplier/buyer diversification, 416
  - supplier misrepresentation incentives, 413–419
  - supplier qualification screening, 417
- Auctions, supply chain risk management:
  - competing suppliers, 400
  - design of, 415

- Background risks:
  - beef supply chain model, procurement risk, 466–470
  - identification of, 21
- Backup agreements:
  - supplier/buyer backup production, asymmetric information and, 416
  - supply chain contracts, 220
- Backup supply sources, supply chain risk management, 89–92
  - availability and cost, 90–91
  - external/internal sources, 392, 397
  - response time and magnitude, 91–92
- Bang-bang control structure, production risk, continuous time setting, 183–185
- Bank costs, bankruptcy-prone newsvendor problem, 257–262
- Bank credit, trade credit *vs.*, 285
- Bank financing:
  - bankruptcy-prone newsvendor problem:
    - retailer's bank financing, 274–275
    - supplier's problems, 279–283
  - capital-constrained newsvendor
    - inventory model, loan schedule coordination, equity-efficiency effects, 377–380
    - future research issues, 380–382
    - literature review, 363–366
    - numerical analysis, 370–377
    - research background, 363–366
    - Stackelberg game, 366–370
  - procurement financing, 292–294
- Bankruptcy costs:
  - bankrupt-prone newsvendor problem, 256–266
  - capital structure, production/inventory management, wipeout bankruptcy, 354–355
  - inventory management, capital constraints, 251–253
- Bankruptcy-prone supply chains:
  - selling to, 266–272
    - optimal order quantity, 266–268
    - Stackelberg game, between supplier and retailer, 268–272
  - trade credit contract financing, 272–285
    - early payment discount model, 273–274
    - retailer's perspective, supplier or bank financing, 274–279
  - supplier financing, 283–285
    - supplier's perspective, optimal contract parameters, 279–283
- wholesale pricing:
  - bank's bankruptcy costs and retailer's debt capacity, 256–262
  - newsvendor problem, 256–266
  - retailer's optimal order quantity, 262–264
  - retailer's profit model, 256–257
- Bankruptcy threshold, bankruptcy-prone newsvendor problem:
  - retailer's optimal order quantity, 262–264
  - retailer's profit model, 256–257
  - supplier financing, 276–278
- Base demand, tailored operational hedging, 45
- Base II accord, 114
- Basel Committee, electric utility risk management, 497
- Base-stock structure:
  - cash and goods, capital structure, production/inventory management, 338–342
  - newsvendor model, no cash constraints, 342–343
  - numerical examples, 344–346
  - short-term decisions, dividend, borrowing and inventory, 350–351
- financial hedge portfolio optimization, 142–143
- optimality opportunity costs, warehouse problem:
  - computation, 458–459
  - financial hedging, 460
  - inventory-dependent pricing, 457–458
  - inventory-independent pricing, 458

- inventory subdivisions, 455–457
- model parameters, 450–452
- overview, 447–449
- stochastic price dynamics, 459–460
- single contract financial hedging, optimal policy per period, 140–142
- storable commodity risk management, 131–132
- supplier portfolio management, demand risk, dynamic model, 438–442
- supply chain contracts, two-period models, 235–236
- Basis risk, production risk, single period models:
  - multiple uncertainties, 170–177
    - costly hedging, 173–175
    - yield risks and, 175–177
  - price uncertainty, options-based hedging, 167–170
- Bayesian theory:
  - business process standards, supply chain risk management:
    - constraint-based learning, 548
    - future research issues, 561
    - global supply chain case study, 550–560
      - data processing and learned risk model, 551–552
      - risk modeling and analysis, 552–557
    - root cause analysis, parent nodes of risk systems, 557–560
  - heterogeneous risk model learning, 546
  - hierarchical causal structure, 545
  - inferential risk analysis, 548–550
  - literature review, 541–542
  - quantification through Bayesian learning, 545–546
  - research background, 537–541
  - risk categorization, 543–545
  - score-based learning, 547–548
  - standard business procedures, 544
  - two-dimensional risk categorization framework, 544–545
  - price risk, single period models, production planning, forwards/futures contracts, 165–167
- Beef supply chain model, procurement risk management:
  - computational experiments, 477–482
  - contract market transaction costs, 484–486
  - decision parameters, 473–474
  - demand and product substitution, 488–490
  - future research issues, 490–492
  - literature review, 470–473
  - processing decision, 474
  - production decision, 474–475
  - research background, 465–470
  - spot price and product market variability, 482–484
- Behavioral decision making, ambiguity modeling, future research issues, 121
- Below-mean semivariance, quantitative risk assessment, 25
- Below-target  $t$  semivariance, quantitative risk assessment, 25
- Benchmarking parameters:
  - bankruptcy-prone newsvendor problem:
    - retailer's problem, 274–275
    - supplier bank financing, 279
  - real options valuation, B-S &M option pricing model, 209, 211
- Bertrand competition, supply chain risk management, 403–404
- Binomial tree structure, supply chain contracts:
  - three-period model, 240
  - two-period models, 234–235
- Black, Scholes, and Merton option pricing model:
  - basic principles, 200–205
  - real options valuation using, 205–214
    - aptness, 211–214
    - case study, 207–211
    - discounting, 212
    - distribution, 212
    - volatility, 212–214

- Boeing's Dreamliner production delay
    - case study, supply chain disruption, 71–72
  - Borrowing, capital structure, production/inventory management, short-term decisions, 347–351
  - Brownian motion, electric utility risk management:
    - liquidity risk, 508–510
    - static hedging, 504–507
  - Budget constraints, procurement
    - financing model, 295–297
    - retailer's optimal ordering strategy, 299–302
    - supplier's optimal contract, 302–305
    - wholesale contract, 298–299
  - Business Continuity Planning (BCP) program (Cisco), 527–528
  - Business partnerships, supply chain risk management and, 528–529
  - Business process standards, supply chain risk management, Bayesian framework:
    - constraint-based learning, 548
    - future research issues, 561
    - global supply chain case study, 550–560
      - data processing and learned risk model, 551–552
    - risk modeling and analysis, 552–557
    - root cause analysis, parent nodes of risk systems, 557–560
  - heterogeneous risk model learning, 546
  - hierarchical causal structure, 545
  - inferential risk analysis, 548–550
  - literature review, 541–542
  - quantification through Bayesian learning, 545–546
  - research background, 537–541
  - risk categorization, 543–545
  - score-based learning, 547–548
  - standard business procedures, 544
  - two-dimensional risk categorization framework, 544–545
- Buy-and-inject (BI) action, base stock optimality model:
  - inventory-dependent price, 457
  - inventory-independent price, 458
- model parameters, 449–452
- opportunity cost rotation, 455–457
- value function, 453–460
- Buyback contract, ambiguity modeling, supply chains, 121–122
- Buyers:
  - beef supply chain model, procurement risk, 467–470
  - supply chain risk management:
    - competing buyers, 393–394, 396, 402–406, 411–413
    - competition and diversification benefits for, 406–407
    - contract design and competition commitment, 404–406
    - impact of disruption on, 401–404
    - incentive misalignment with suppliers, 393, 398
  - supply chain risk management and relationships with, 522–523
- Call options:
  - financial hedging and, 37–38
  - perfect hedge ratio (call option delta), 204
  - storable commodity risk management, discrete and continuous demand, 151–152
- Call value, Black, Scholes, and Merton option pricing model, 202–205
- Capabilities development, supply chain risk management, 518–523
  - architect function, 521–522
  - information collection, communication and response, 518–519
  - performance and design metrics, 520–523
  - relationship structure and management, 522–523
  - sourcing trade-off quantification, 520–521
  - uncertainty impact assessment, 519–520
- Capacity constraints:
  - base stock optimality model:
    - inventory-independent price, nonlinearity, 458

- inventory subdivision, capacity
      - unconstrained problem, 456–457
    - optimal nontrivial capacity
      - underutilization, 458
  - beef supply chain model:
    - future investment decisions, 492
    - process-based risk, 474
  - expansion alternative, real options
    - valuation, B-S &M option pricing model, 207–211
    - volatility, 213–214
  - production risk, continuous time
    - setting, 185–188
  - supply chain risk management, 390–391
  - tailored operational hedging, 44–45
- Capacity reservation supply chain
  - contracts, 220–221
- Capital Asset Pricing Model (CAPM):
  - procurement financing, 316–319
  - storable commodity risk management, 134–135
- Capital asset risk, defined, 21
- Capital-constrained newsvendor (CCNV)
  - model, bank financing, loan schedule coordination:
    - equity-efficiency effects, 377–380
    - future research issues, 380–382
    - literature review, 363–366
    - numerical analysis, 370–377
    - research background, 363–366
    - Stackelberg game, 366–370
- Capital structure, production/inventory management:
  - base-stock policies, cash and goods, 338–342
  - bibliographical sources, 358–360
  - coordination *vs.* decentralization, 351–352
  - dimensionality reduction, 334
  - discrete-time model parameters, 330–333
  - future research issues, 357–358
  - long-term decisions, 346–353
  - myopic optimum, 336–337
  - non-negative dividends, 356–357
  - numerical examples, 344–346
  - operations and finance, 327–329
  - optimal policy properties, 333–346
  - optimization of, 352–353
  - pecking order optimality, 337
  - short-term decisions, dividend, borrowing, and inventory, 347–351
  - standard newsvendor inventory model, no cash constraints, 342–343
  - wipeout bankruptcy, 354–355
- Captive supplies, beef supply chain model, procurement risk, 472–473
- Cash flow projections:
  - capital structure, production/inventory management, base-stock policies, cash and goods, 338–342
  - real options valuation, B-S &M option pricing model:
    - by investment stage, 209–211
    - by net present value, 207–209
- Cattle cycle dynamics, beef supply chain
  - model, procurement risk, literature review, 471–473
- Certainty equivalent, ambiguity modeling, 104–105
- Chaining, tailored operational hedging, 45
- Cisco-Sichuan earthquake case study, supply chain risk management, 527–533
- action-based strategies, 529–530
- Business Continuity Planning program, 527–528
- business partnerships, 528–529
- corporate culture for risk management, 527
- impact quantification, 530–531
- manufacturing base risk mitigation, 532
- monitoring and crisis management program, 528
- opportunity in disruption, 532–533
- product resiliency, 528
- senior management support, 533
- supply base risk mitigation, 531
- supply resiliency, 528

- Coefficient of absolute risk aversion, 26–27
- Coefficient of variation, procurement financing, retailer-supplier equilibrium computations, 313–315
- Collateral constraints:
  - bankruptcy-prone newsvendor problem, 265–266
  - inventory financing, 251–253
- Collateral protected fixed fees, bankruptcy-prone newsvendor problem, bank's bankruptcy costs and retailer's debt capacity, 259–262
- Commercial risk, 19
- Commitment timing, supplier-development strategy, 97–98
- Commodity exchanges:
  - financial hedge portfolio optimization, 142–143
  - single contract financial hedging, buyer's utility function, 137–139
  - storable commodity risk management, 132–133
    - price and demand dynamics, 150–152
    - research background, 127–129
- Commodity storage, base stock optimality opportunity costs:
  - example, 449–450
  - overview, 448–449
- Communication strategies:
  - demand management, supply chain risk, 95–96
  - supply chain risk management, 518–519
- Competency risks, identification of, 19
- Competition:
  - procurement contracts, 296–297
  - retailer-supplier equilibrium computations, 313–315
  - supplier-development strategy, 96–97
  - supplier information misrepresentation, 414–415
  - supply chain disruption, 63
    - competing buyers, 401–406
    - competing manufacturers, 408–413
    - competing suppliers, 393, 396, 398–400, 406–407, 414–415
    - diversification and, 401–404
- Competitive loan pricing:
  - bankruptcy-prone newsvendor problem, bank's bankruptcy costs and retailer's debt capacity, 258–262
  - inventory management, 251–253
  - procurement contracts, external financing, 308–310
- Competitive risk, 21
  - single period models, production planning, 160–170
    - forwards/futures contracts, 163–167
    - options model, 167–170
- Concave utility function:
  - capital structure, production/inventory management, 335
  - financial hedge portfolio optimization, 142–143
  - price risk, single period models, production planning, 160–170
    - options-based hedging, 167–170
    - risk assessment and, 26–27
- Conditional Value-at-Risk, ambiguity modeling, 104–105
  - single period newsvendor setting, 109–113
- Constant absolute risk aversion (CARA), production risk, single period models:
  - multiple uncertainties, price and basis risks, 174–177
  - price uncertainty, 161–170
    - options-based hedging, 168–170
  - yield risks, 175–177
- Consumption volume risk:
  - electric utility risk management, static hedging, 505–507
  - storable commodity risk management, 129

- Contingency planning:
  - risk recovery, 29–30
  - supply risk management, payments
    - contingent on supply events, 392, 397, 418
- Contingent claims methodology:
  - basic principles, 198–200
  - financial option pricing model, 201–205
    - equations, 203–204
    - risk neutrality, 205
  - future research perspectives, 214–215
  - real options valuation in operations, 205–214
    - aptness, 211–214
    - case study and applications, 207–211
    - discounting, 212
    - distribution, 212
    - volatility, 212–214
- Contract cattle, beef supply chain model,
  - procurement risk:
    - computational methods, 477–482
    - contract market transaction costs, 484–486
    - processing decision, 474
    - procurement decisions, 473–474
    - quality differences, 486–487
    - spot price and product market variability, 482–484
    - stochastic recourse model, 475–476
    - utilization cost parameter, 487–488
- Contract markets, beef supply chain model, procurement risk, 467–470
  - captive supplies, 472–473
  - computational methods, 477–482
  - procurement decisions, 473–474
  - transaction cost effects, 484–486
- Convenience yield, real options valuation,
  - B-S & M option pricing model, 211–212
- Cooperative decision-making, supply chain risk management, 420–421
- Coordinated decisions, capital structure, production/inventory management, 351–353, 357–358
- Coordination risk:
  - ambiguity modeling, supply chains, 121–122
  - identification of, 20
- Coupon payment, capital structure, production/inventory management, short-term decisions, 347–351
- Credit contracts:
  - electric utility risk management, liquidity risk, 509–510
  - procurement financing, 290–294, 295–297, 316–319
    - adverse selection problem, 317–319
    - external financing, 308–310
    - invariant equilibrium, 305
    - nonoperative supply chain, 306–307
    - retailer-supplier equilibrium
      - computations, 311–315
    - supplier's optimal contract, 304–306
  - procurement financing equilibrium, 299–307
    - nonoperative supply chain, 306–307
    - retailer's optimal ordering strategy, 299–302
    - supplier's optimal contract, 302–305
- Crisis management, supply chain risk and, 528
- Cross-functional risk expertise:
  - storable commodity risk management, 131–132, 153–154
  - supply chain disruption, 68
- Cross hedging, single period models, production planning, multiple uncertainties, 170–173
- Cross-price elasticity parameter, beef supply chain model, procurement risk, product and demand substitution, 488–490
- Cumulative demand, production risk, continuous time setting, 180–183
- Cumulative distribution function (CDF), supply chain financing, demand uncertainty, 254–256

- Currency risk, forward contracts and swaps and, 39–41
- Customer Value Chain Management (CVCM) (Cisco), Sichuan earthquake, supply chain disruption case study, 527–533
- Decentralized operations:
  - capital structure, production/inventory management, 351–353, 357–358
  - supply risk management:
    - asymmetric information, 394, 396, 413–419
    - auction mechanisms, 415
    - backup supply sources, internal/external, 392, 397
    - backup supply sources, supplier/buyer, 416
    - competing buyers, 393–394, 396, 402–406, 411–413
    - competing manufacturers, 408
    - competing suppliers, 393, 396, 398–400, 406–407, 414–415
    - competition *vs.* diversification, 401–406
    - Cournot competition, 409–410
    - critical part shortage/loss of supplier capacity, 390–391
    - diversification strategies, 400–401, 416
    - future research issues, 419–421
    - incentive misalignment, suppliers and buyers, 393, 398
    - literature taxonomies, 394–397
    - market-entry competition, 410
    - multisourcing strategies, 392, 397
    - production costs, private information about, 413–414
    - quality controls, 417–418
    - research background, 389–390
    - supplier misrepresentation incentives, 413–416
    - supplier qualification screening/risk discovery, 392, 396, 417
    - supplier subsidies, competing buyers, 411–413
    - supply cost inflation, 391
    - supply reliability, private information about, 414
    - trading mechanisms, 415–416
    - uncertainty characteristics, 397
- Decision support systems, supply chain disruptions, 99
- Decision theory:
  - ambiguity modeling, 107–109
  - attitude characterization, 107–109
  - future research issues, 120–122
  - supply chain inventory management, 113–120
  - bankruptcy-prone supply chains, trade credit model, 273–274
  - beef supply chain model, procurement risk:
    - basic principles, 473–474
    - processing decision, 474
    - production decision, 474–475
    - stochastic recourse model, 475–476
  - capital structure, production/inventory management:
    - coordinated *vs.* decentralized decisions, 351–352
    - long-term decisions, 346–353
    - optimal short-term decisions, 347–351
  - Ellsberg paradox, 105–107
  - storable commodity risk management, management behavior, 153–154
  - supply chain risk management, time-based supplier competition decisions, 406–407
- Decision tree analysis (DTA), real options valuation and, 199–200
  - future research issues, 215
  - volatility, 214
- Decreasing absolute risk aversion (DARA), price risk, single period models, production planning, 161

- Default penalty, capital structure,
  - production/inventory management, 337–338
  - short-term decisions, dividend, borrowing and inventory, 350–351
- Default probability, capital-constrained newsvendor model, bank financing, equity effects, 373–377
- Delivery lead-time risk, critical parts shortages, supply chain risk management, 391
- Demand pooling:
  - operational hedging and, 35
  - tailored operational hedging, 45
- Demand risk:
  - ambiguity modeling:
    - single period newsvendor setting, 109–113
    - supply chain inventory management, 114–120
  - bankruptcy-prone newsvendor problem:
    - bank's bankruptcy costs and retailer's debt capacity, 260–262
    - optimal trade credit contract parameters, 280–283
  - beef supply chain model, procurement risk:
    - computation methods, 479–482
    - literature review, 470–473
    - production decisions and, 475
  - electric utility risk management, time and seasonal variations, 496
  - identification of, 20
  - integrated production and risk hedging, financial instruments, 159
    - multiperiod models, continuous time settings, 179–192
  - options-based hedging of, 36–38
  - procurement financing, retailer-supplier equilibrium computations, 313–315
  - single contract financial hedging, buyer's utility function, 138–139
  - storable commodity risk management:
    - discrete and continuous demand, 150–152
    - operational and financial hedging, 148–150
  - supplier portfolio management:
    - dynamic model, progressive demand revelation, 436–442
    - future research issues, 442–443

    - forwards/futures contracts, 163–167
  - single contract financial hedging:
    - buyer's utility function, 137–139
    - optimal policy per period, 140–142
  - storable commodity risk management, 129–135
    - operational and financial hedging, 148–150
- Stackelberg game:
  - bankruptcy-prone newsvendor problem:
    - optimal trade credit contract parameters, 280–283

- Stackelberg game: (*Continued*)
- supplier-retailer interaction, 268–272
  - trade credit model, 274
  - capital-constrained newsvendor model, 366–370
  - inventory financing, 251–253
  - price negotiation process, 221
  - procurement financing model, 295–297
- Stackelberg-Nash equilibrium,
- procurement financing model, wholesale contract, 298–299
- Standard business process, supply chain risk management, 544–545
- Static models:
- electric utility risk management, 503–507
  - supplier portfolio management, demand risk, 430–436
  - supply chain risk management and, 516
- Statistical methods, stock price performance, estimation methodology, 73–74
- Stochastic programming framework:
- ambiguity modeling, supply chain inventory management, 115–120
  - base stock optimality model, price dynamics, 458–459
  - production risk, continuous time setting, 180–183
  - supply chain contract valuation, 222–223
  - random variables, 224–226
- Stock price performance:
- Black, Scholes, and Merton option pricing model, 201–205
  - supply chain contract valuation, volatility in, 238–239
  - supply chain disruption analysis, estimation methodology, 73–75
- Storable commodity risk management:
- base stock optimality opportunity costs, 449–450
  - model parameters, 450–452
  - overview, 448–449
  - warehouse problem, 452–460
- financial hedges portfolio, optimal policy, 142–143
- literature review, 132–133
- management behavior, 153–154
- model applications and results, 150–152
- operational and financial hedges, 143–150
- mean, variance and utility impacts, 147–150
  - service-level impact, 144–146
- problem setting, 129–132
- notation and assumptions, 133–136
  - utility function, 136–137
- research background, 127–129
- single contract financial hedging, optimal policy, 137–142
- buyer's utility function, 137–139
  - periodic optimization, 139–142
- Strategic risk:
- identification, 21
  - mitigation, 16–17, 30–33
- Strike price, storable commodity risk management, 135
- Subjective expected utility (SEU) theory, ambiguity modeling, 105–107
- Subjective risk map, 22–23
- Substitution effect, price risk, single period models, production planning, forwards/futures contracts, 164–167
- Suppliers:
- availability risks:
    - storable commodity risk management, 129
    - supplier reliability, private information, 414
  - bankruptcy-prone newsvendor problem:
    - optimal contract, 279–283
    - profitability with retailer financing, 283–284
    - retailer profitability under, 284–285
    - retailer's contract, 275–278

- Stackelberg game, supplier-retailer interaction, 268–272
- beef supply chain model, procurement risk, 467–470
- capacity losses, supply chain risk management, 390–391
- early payment discount, inventory financing, 252–253
- investment, supply chain disruption reduction, 392
- optimal contracts:
  - bankruptcy-prone newsvendor problem, 279–283
  - procurement financing, 302–305, 321–324
- portfolio management, demand risk and:
  - dynamic model, progressive demand revelation, 436–442
  - future research issues, 442–443
  - literature review, 428–430
  - overview, 425–428
  - static model, 430–436
- qualification screening, supply chain risk management, 392, 396–417
- supply chain risk management:
  - competing suppliers, 393, 396, 398–400, 406–407, 414–415
  - incentive misalignment with buyers, 393, 398
  - risk mitigation, supply phase, 531
  - supply chain risk management and relationships with, 522–523
- Supply chain contracts:
  - buyer's design of, 404–406
  - financial valuation:
    - assumptions, 228
    - demand volatility effect, 237–238
    - dual formulation, 231–234
    - exercise price effect, 236
    - experimental study, 234–235
    - financial markets, arbitrage, and martingales, 223–226
    - future research issues, 243
    - holding cost effect, 241–242
    - model parameters, 226–231
    - notation, 227–228
    - number of options effect, 236
    - purchase effect, 236–237
    - research overview, 219–223
    - riskless asset interest rate, 239–240
    - sales price effect, 240–241
    - stock-out cost effect, 242–243
    - stock price volatility, 238–239
- Supply chain disruptions:
  - ambiguity modeling, 114–120
  - buyer impact of, 401–404
  - case studies, 69–72
  - corporate performance and:
    - mitigation strategies, 64–72
    - profitability effects, 61–63
    - research background, 51–53
    - sample, performance metrics, and methodology, 53–55
    - shareholder value effects, 55–58
    - share price volatility, 58–60
  - decision support systems, 99
  - drivers of, 63–64
  - financial impact, estimation methodology, 73–75
  - future research issues, 98–100
  - interruption insurance, 100
  - investment in suppliers and reduction of, 392, 396
  - operational strategies:
    - backup supply, 89–92
    - demand management, 92–96
    - detection, 84
    - diversification, 86–89
    - isolation, 84–85
    - recovery, 85
    - research overview, 79–82
    - risk profile, 83–84
    - stockpile inventory, 82–83
    - supply chain strengthening, 96–98
  - opportunity in, 532–533
  - recent examples, 538–539
  - risk evaluation strategies, 99–100
- Supply Chain Operations Reference Model (SCOR), 539–540, 543–544
- development for supply chain risk management, 517–518

- Supply Chain Resiliency program (Cisco), 528
- Supply Chain Risk Leadership Council (SCRLC), 523–524
- Supply chain risk management:
  - action-based framework, 4–7
  - execution stage, 7
  - planning stage, 4–7
- beef supply chain model, procurement risk, literature review, 471–473
- capabilities development, 518–523
  - architect function, 521–522
  - information collection, communication and response, 518–519
  - performance and design metrics, 520–523
  - relationship structure and management, 522–523
  - sourcing trade-off quantification, 520–521
  - uncertainty impact assessment, 519–520
- Cisco-Sichuan earthquake case study, 527–533
  - action-based strategies, 529–530

- static metrics, 516
- supply change finance, 10
- tailored operational hedging,
  - redundancy and multisourcing, 45–47
  - vulnerability map, 5
- Supply-demand mismatch risk, storable commodity risk management, 143–150
- Supply pooling, operational hedging and, 35
- Swaps, currency risk and, 39–41
- Switching strategies, demand management, supply chain risk, 93
- Tactical risk decisions, risk management using, 17
- Tailored operational hedging:
  - base demand, tail-pooling, and chaining, 45
  - example, 42–43
  - redundancy and dynamic pooling with allocation flexibility, 43–45
  - tailored redundancy and multisourcing, 45–47
- Tail-pooling, tailored operational hedging, 45
- Tax benefits, capital structure, production/inventory management, short-term decisions, 347–351
- Technical risk, identification of, 20
- Technology investment:
  - beef supply chain model, 492
  - supply chain disruption reduction and, 67
- Trade credit contract financing:
  - bank credit *vs.*, 285
  - bankruptcy-prone supply chains, 272–285
    - early payment discount model, 273–274
    - retailer’s perspective, supplier or bank financing, 274–279
    - supplier financing, 283–285
    - supplier’s perspective, optimal contract parameters, 279–283
  - inventory management, 252–253
    - model setting, common notation and assumptions, 253–256
  - supply risk management,
    - nonperformance penalties, contingent payments, 392, 397, 418
- Trading mechanisms, supply chain risk management, 415–416
- Transaction costs, beef supply chain model, procurement risk, contract markets, 484–486
- Transfer of risk, operational hedging and, 34, 36
- Two-dimensional Itô process, production risk, continuous time setting, 181–183
- Two-echelon ambiguity model:
  - procurement contracts, 289–294, 315–319
  - supply chain management, 122
- Uncertainty:
  - beef supply chain model, procurement risk, market uncertainty, 491–492
  - supply chain risk management, 397
    - impact assessment, 519–520
- Unconstrained newsvendor model:
  - retailer’s bank financing, 274–275
  - supplier financing, 277–278

- Utility functions:
- financial hedge portfolio optimization, 142–143
  - production risk, single period models:
    - multiple uncertainties, price and basis risks, 174–175
    - price uncertainty, forwards/futures contracts, 166–167
  - risk assessment and, 26–27
  - single contract financial hedging:
    - buyer's utility function, 137–139
    - operational and financial hedging, 147–150
    - optimal policy per period, 141–142
  - storable commodity risk management, 136–137
- Valuation mechanisms. *See also* Financial valuation; Real options valuation
