**Part One Electrochemical Fundamentals and Active–Passive Corrosion Behaviors**

**1. Fundamentals of Electrochemical Corrosion**      **3**

---

Overview      3

*A. Thermodynamic Considerations of Corrosion*      3

- 1.1. Electrolytic Conductance      4
  - 1.1.1. Faraday Laws      5
- 1.2. Tendency to Corrosion      6
- 1.3. The Electrochemical Interface      7
  - 1.3.1. Electric Double Layer      8
  - 1.3.2. Equivalent Circuit of the Electric Double Layer      9
- 1.4. Nernst Equation      9
- 1.5. Standard Potentials of Electrodes      12
  - 1.5.1. Standard States in Solution      12
  - 1.5.2. Hydrogen Electrode      13
  - 1.5.3. Positive and Negative Signs of Potentials      13
  - 1.5.4. Graphical Presentation      14

*B. Activity and Conductance of the Electrolyte*      14

- 1.6. Activity of the Electrolyte      14
  - 1.6.1. Constant and Degree of Dissociation      14
  - 1.6.2. Activity and Concentration      16

1.6.3. Theory of More Concentrated Solutions      17

1.6.4. Electrolytic Conduction      19

1.7. Mobility of Ions      19

1.7.1. Law of Additivity of Kohlrausch      20

1.7.2. Ion Transport Number or Index      21

1.8. Conductance      23

1.9. Potential of Decomposition      24

*C. The Different Types of Electrodes*      24

1.10. Gas Electrodes      24

1.11. Metal–Metal Ion Electrodes      25

1.11.1. Alloyed Electrodes      25

1.12. Metal–Insoluble Salt or Oxide Electrodes      26

1.12.1. Metal–Insoluble Salt Electrodes      26

1.12.2. Metal–Insoluble Oxide Electrodes      27

1.13. Electrodes of Oxidation–Reduction      28

1.14. Selective Ion Electrodes      29

1.14.1. Glass Electrodes      29

1.14.2. Copper Ion-Selective Electrodes      30

*D. Electrochemical and Corrosion Cells*      31

1.15. Chemical Cells      31

1.15.1. Chemical Cell with Transport      31

1.15.2. Chemical Cell Without Transport      33

1.16. Concentration Cells      34

1.16.1. Concentration Cell with Difference of Activity at the Electrode and Electrolyte      35

1.16.2. Junction Potential      37

1.17. Solvent Corrosion Cells      41

- 1.17.1. Cathodic Oxidoreduction Reaction 41
- 1.17.2. Displacement Cell 41
- 1.17.3. Complexing Agent Cells 42
- 1.17.4. Stray Current Corrosion Cell 43
- 1.18. Temperature Differential Cells 43
- 1.19. Overlapping of Different Corrosion Cells 43

*E. Chemical and Electrochemical Corrosion 44*

- 1.20. Definition and Description of Corrosion 44
- 1.21. Electrochemical and Chemical Reactions 45
  - 1.21.1. Electrochemical Corrosion 46
  - 1.21.2. Film-Free Chemical Interactions 47
- References 48

**2. Aqueous and High-Temperature Corrosion 49**

---

- Overview 49
- 2.1. Atmospheric Media 49
  - 2.1.1. Description 49
  - 2.1.2. Types of Corrosion 50
  - 2.1.3. Atmospheric Contaminants 51
  - 2.1.4. Corrosion Prevention and Protection 53
- 2.2. Aqueous Environments 53
- 2.3. Organic Solvent Properties 55
- 2.4. Underground Media 56
- 2.5. Water Media Properties 57
  - 2.5.1. Water Composition 58
  - 2.5.2. The Oxidizing Power of Solution 61
  - 2.5.3. Scale Formation and Water Indexes 62
- 2.6. Corrosion at High Temperatures 65
  - 2.6.1. Description 65

- 2.6.2. The Pilling–Bedworth Ratio (PBR) 66
- 2.6.3. Kinetics of Formation 70
- 2.6.4. Corrosion Behaviors of Some Alloys at Elevated Temperatures 72
- References 76

**3. Active and Passive Behaviors of Aluminum and Magnesium and Their Alloys 78**

---

- Overview 78
- 3.1. Potential–pH Diagrams of Aluminum and Magnesium 79
  - 3.1.1. Construction of Pourbaix Diagrams 79
  - 3.1.2. Predictions of  $E$ –pH Diagrams 81
  - 3.1.3. Utility and Limits of Pourbaix Diagrams 83
- 3.2. Active Behavior and Overpotentials 84
  - 3.2.1. Active Behavior and Polarization 84
  - 3.2.2. Overpotentials 84
- 3.3. Passive Behavior 94
  - 3.3.1. The Phenomenon of Passivation 94
  - 3.3.2. Passive Layers and Their Formation 97
  - 3.3.3. Breakdown of Passivity 100
  - 3.3.4. Electrochemical and Physical Techniques for Passive Film Studies 101
- 3.4. Active and Passive Behaviors of Aluminum and Its Alloys 102
  - 3.4.1. The  $E$ –pH Diagram of Aluminum 102
  - 3.4.2. Active and Passive Behaviors 105
  - 3.4.3. Pitting Corrosion of Aluminum Alloy 5086 108
- 3.5. Active and Passive Behaviors of Magnesium and Its Alloys 110
  - 3.5.1.  $E$ –pH Diagram of Magnesium 110
  - 3.5.2. Passive Mg Layers (Films) 113

3.5.3.	Passive Properties and Stability	114
3.5.4.	Temperature Influence in Aqueous Media	116
3.5.5.	Atmospheric and High-Temperature Oxidation	117
References		118

**Part Two Performance and Corrosion Forms of Aluminum and Its Alloys**

**4. Properties, Use, and Performance of Aluminum and Its Alloys 123**

Overview	123
<i>A. Properties of Aluminum</i>	124
4.1. Physical and General Properties of Aluminum	124
4.2. Cast Aluminum Alloys	125
4.2.1. Designation of Cast Aluminum Alloys and Ingots	126
4.2.2. Alloying Elements	128
4.2.3. Cast Alloys Series	129
4.3. Wrought Aluminum Alloys	130
4.3.1. Designation of Wrought Aluminum Alloys	130
4.3.2. Alloying Elements	131
4.3.3. Wrought Aluminum Alloys Series	133
4.3.4. Description of the Wrought Alloys Series	136
4.4. Aluminum Powders and Aluminum Matrix Composites	140
4.4.1. Aluminum Powders	140
4.4.2. Rapid Solidification Processing	142
4.4.3. Aluminum Matrix Composites and P/M- MMCs	142
4.4.4. Al MMC Particles and Formation	147
<i>B. Use of Aluminum and Aluminum Alloys</i>	151
4.5. Use of Cast Aluminum Alloys	152
4.5.1. Standard General Purpose Aluminum Alloys	152
4.5.2. Some Specific Uses	153

4.6. Use of Wrought Aluminum Alloys	154
4.6.1. Aerospace Applications	154
4.6.2. Automotive Sheet and Structural Alloys	154
4.6.3. Shipping	156
4.6.4. Building and Construction	156
4.6.5. Packaging	156
4.6.6. Electrical Conductor Alloys	156

*C. Aluminum Performance 157*

4.7. Resistance of Aluminum Alloys to Atmospheric Corrosion	157
4.8. Factors Affecting Atmospheric Corrosion of Aluminum Alloys	158
4.9. Water Corrosion	160
4.10. Seawater	161
4.11. Soil Corrosion	162
4.12. Some Aggressive Media: Acid and Alkaline Solutions	162
4.12.1. Acids	164
4.12.2. Alkalis	166
4.13. Dry and Aqueous Organic Compounds	167
4.14. Gases	168
4.15. Mercury	168
4.16. Corrosion Performance of Alloys	169
4.16.1. Performance of the Cast Series	169
4.16.2. Performance of the Wrought Series	171
4.17. Aluminum High-Temperature Corrosion	172
References	173

**5. General, Galvanic, and Localized Corrosion of Aluminum and Its Alloys 176**

Overview	176
<i>A. General Corrosion</i>	177
5.1. General Considerations	177
5.2. Description	177
5.3. Mechanisms	179

5.4.	Prevention	179
5.4.1.	Design Considerations	179
5.4.2.	Surface Pretreatment	179
5.4.3.	Corrosion Control	180
5.4.4.	Aluminum Alloys and Resistance to General Corrosion	180
<i>B. Galvanic Corrosion 181</i>		
5.5.	General Considerations	181
5.6.	Galvanic Series of Aluminum Alloys	181
5.7.	Mechanisms	185
5.7.1.	Cu–Al Galvanic Cell	185
5.7.2.	Mg–Al Galvanic Cell	186
5.7.3.	Galvanic Effect of a Coating	186
5.8.	Deposition Corrosion	187
5.9.	Stray Current Corrosion	188
5.10.	Prevention	188
5.11.	Basic Study of Al–Cu Galvanic Corrosion Cell	189
<i>C. Localized Corrosion 190</i>		
5.12.	Pitting Corrosion	191
5.12.1.	Occurrence and Morphology	191
5.12.2.	Kinetics	191
5.12.3.	The Pitting Potential	193
5.12.4.	Mechanisms	194
5.12.5.	Possible Stages of Pitting	195
5.12.6.	Prevention of Pitting Corrosion	201
5.12.7.	Corrosion Resistance of Aluminum Cathodes	202
5.13.	Crevice Corrosion	203
5.13.1.	General Considerations and Description	203
5.13.2.	Poultice Corrosion	205
5.13.3.	Mechanisms	206
5.13.4.	Water Stains on AA3xxx	206
5.14.	Filiform Corrosion	208
5.14.1.	General Considerations	208
5.14.2.	Aluminum Alloys and Filiform Corrosion	209
5.14.3.	Kinetics, Mechanism, and Prevention	210
5.14.4.	Filiform Occurrence	211
References		212

## 6. Metallurgically and Microbiologically Influenced Corrosion of Aluminum and Its Alloys 215

---

	Overview	215
<i>A. Metallurgically Influenced Corrosion (METIC) 216</i>		
6.1.	Fundamentals of METIC	216
6.1.1.	Influence of Metallurgical and Mechanical Treatments	217
6.2.	Types of Metallurgically Influenced Corrosion	218
6.2.1.	Dealloying (Dealuminification)	218
6.2.2.	Intergranular Corrosion	218
6.2.3.	Exfoliation	224
6.3.	Joining and Welding	231
6.3.1.	Corrosion Resistance of Brazed, Soldered, and Bonded Joints	231
6.3.2.	Welding Fundamentals	233
6.3.3.	Welding Influence on Behavior of Aluminum Alloys	236
6.3.4.	Frequent Corrosion Types of Welded Aluminum Alloys	239
6.3.5.	Corrosion Resistance of Wrought and Cast Al Alloys	241
6.4.	Metal Matrix Composites for Nuclear Dry Waste Storage	247
<i>B. Microbiologically Influenced Corrosion: The Basics 249</i>		
6.5.	Microorganisms	249
6.5.1.	Bacteria (Prokaryotes)	249
6.5.2.	Fungi and Yeast (Eukaryotes)	249
6.5.3.	Algae (Eukaryotes)	249
6.5.4.	Lichens	250
6.6.	Natural and Artificial Media	250
6.6.1.	Air Media	250
6.6.2.	Aqueous Media	250
6.6.3.	Soils	250
6.7.	Anaerobic and Aerobic Bacteria in Action	251
6.7.1.	Anaerobic Bacteria	251
6.7.2.	Aerobic Bacteria	252
6.7.3.	Co-action of Anaerobic and Aerobic Bacteria	252

6.8.	MIC of Aluminum and Aluminum Alloys	254	7.9.	Mechanisms of Corrosion Fatigue	277
6.8.1.	Fungi and Bacteria (Space)	254	7.10.	Corrosion Fatigue of Aluminum Alloys	278
6.8.2.	<i>Geotrichum</i> (Tropical Atmosphere)	254	7.10.1.	Corrosion Fatigue of AA7017-T651	279
6.8.3.	Cyanobacteria and Algae (Polluted Freshwater)	254	7.10.2.	Corrosion Fatigue of AA7075-T6	281
6.8.4.	Rod-Shaped Bacteria and Algae (Polluted Seawater)	255	7.10.3.	Corrosion Fatigue of Al-Mg-Si Compared to Al-Mg Alloys	281
6.8.5.	SRB (Industrial and Seawater)	255	7.10.4.	Modeling of the Propagation of Fatigue Cracks in Aluminum Alloys	285
6.8.6.	<i>Hormoconis resinae</i> (Kerosene)	256	7.11.	Prevention of Corrosion Fatigue	287
6.9.	Mechanisms of MIC and Inhibition	256	References	288	
6.9.1.	Corrosion Mechanisms	256			
6.9.2.	Influence of Biofilms on Passive Behavior of Aluminum	258			
6.9.3.	Corrosion Inhibition by Microorganisms	258			
6.10.	MIC Prevention and Control	259			
References	260				

## 7. Mechanically Assisted Corrosion of Aluminum and Its Alloys 263

	Overview	263
A.	<i>Erosion Corrosion</i>	264
7.1.	Impingement with Liquid-Containing Solid Particles	264
7.2.	Corrosion by Cavitation	268
7.3.	Water Drop Impingement Corrosion	269
7.4.	Fretting Corrosion	271
7.5.	Fretting Fatigue Corrosion	271
7.6.	Prevention of Erosion Corrosion	272
B.	<i>Corrosion Fatigue</i>	272
7.7.	General Considerations and Morphology	272
7.8.	Parameters	273
7.8.1.	Environmental Considerations	273
7.8.2.	Cyclic Stresses	274
7.8.3.	Material Factors	277

## 8. Environmentally Induced Cracking of Aluminum and Its Alloys 289

	Overview	289
8.1.	Introduction and Definition of SCC	289
8.2.	Key Parameters	291
8.2.1.	Stress	291
8.2.2.	Environment	292
8.3.	SCC Parameters of Aluminum Alloys	294
8.3.1.	Influence of Stress	294
8.3.2.	Role of Environment	295
8.4.	SCC Mechanisms	297
8.4.1.	Overlapping of Cracking Phenomena	297
8.4.2.	Significance of the Magnitude of Strain Rates	299
8.4.3.	Cracking Initiation and Propagation	300
8.5.	SCC of Aluminum Alloys	301
8.5.1.	SCC Resistance of Aluminum Alloys	302
8.5.2.	Influence of Heat Treatments on Corrosion Forms	304
8.6.	SCC of Welded Aluminum Alloys	306
8.6.1.	Galvanic Corrosion and SCC of Welded Assemblies	306
8.6.2.	SCC Knife-Line Attack	307
8.6.3.	Localized Corrosion and SCC of LBW AA6013	308

8.6.4.	Mechanically Influenced Corrosion and SCC of Welds	310
8.6.5.	Corrosion Fatigue of Friction Stir Welding White Zone	310
8.6.6.	SCC of Friction Stir Welded 7075 and 6056 Alloys	311
8.6.7.	SCC of FSW of 7075-T651 and 7050-T451 Alloys	312
8.7.	Prevention of SCC	313
8.7.1.	Design and Stresses	313
8.7.2.	Environmental Considerations	313
8.7.3.	Metallurgical Considerations	314
8.7.4.	Surface Modification	315
8.7.5.	Prevention of Hydrogen Damage	316
References		316

Part Three Performance and Corrosion Forms of Magnesium and Its Alloys

**9. Properties, Use, and Performance of Magnesium and Its Alloys 321**

Overview	321
A. <i>Properties of Magnesium Alloys</i>	322
9.1. Physical and General Properties of Magnesium	322
9.2. Properties of Cast Magnesium Alloys	323
9.2.1. Designation of Cast Magnesium Alloys	323
9.2.2. Alloying Elements	324
9.2.3. Cast Magnesium Alloys Series	325
9.3. Properties of Wrought Magnesium Alloys	328
9.4. Magnesium Powder	333
9.5. Magnesium Composites	333
9.6. Particles Reinforcing Magnesium Alloy Matrix	334
9.6.1. SiC	334
9.6.2. Mg <sub>2</sub> Si	334
9.6.3. Nanosized Alumina Particulates	335

B. *Use of Magnesium and Magnesium Alloys* 335

9.7. Applications of Cast Magnesium Alloys	335
9.7.1. Automotive and Aerospace Applications	336
9.7.2. Application as Refractory Material	336
9.7.3. Other Uses	337
9.8. Applications of Wrought Magnesium Alloys	337

C. *Magnesium Performance* 338

9.9. Resistance of Magnesium Alloys to Atmospheric Corrosion	338
9.10. Factors Affecting Atmospheric Corrosion of Magnesium Alloys: Effect of Sulfites and Sulfates	340
9.11. Water Corrosion	340
9.12. Salt Solutions	341
9.13. Acid and Alkaline Solutions	343
9.14. Aqueous Organic Compounds	343
9.15. Dry Organic Compounds	343
9.16. Gases at Ambient Temperature Up to About 100 °C	344
9.17. Magnesium High-Temperature Corrosion	344
References	346

**10. General, Galvanic, and Localized Corrosion of Magnesium and Its Alloys 348**

Overview	348
A. <i>General Corrosion</i>	348
10.1. Corrosion Resistance of Passive Magnesium	349
10.1.1. $E_{\text{corr}}$ and Corrosion Rates in Natural and Aqueous Media	349
10.1.2. Corrosion Rate Methods of Mg–Al Alloys	351

10.1.3.	Critical Evaluation of the Passive Properties of Magnesium Alloys	352
10.2.	The Negative Difference Effect (NDE)	353
10.3.	Kinetic Studies of General and Pitting Corrosion of Magnesium Alloys	358
10.3.1.	Electrochemical Noise Studies	358
10.4.	Corrosion Prevention	361
<i>B. Galvanic Corrosion</i> 362		
10.5.	Hydrogen Overpotentials	363
10.6.	Galvanic Corrosion of Pure and Alloyed Magnesium	364
10.6.1.	Cathodic Corrosion of Aluminum	365
10.6.2.	Cathodic Damage to Coatings	366
10.7.	Composite Coat for Molten Magnesium	366
10.8.	Metal Matrix Composite Galvanic Corrosion	367
10.9.	Prevention of Galvanic Corrosion	367
10.9.1.	Joining Magnesium to Dissimilar Metal Assemblies	368
10.9.2.	Joining Magnesium to Nonmetallic Assemblies	369
<i>C. Localized Corrosion</i> 369		
10.10.	Pitting Corrosion	369
10.10.1.	The Pitting Potential Determination	370
10.10.2.	Polarization Curves and Pitting Potential of AXJ Alloy	372
10.11.	Crevice Corrosion	374
10.12.	Filiform Corrosion	375
10.12.1.	Initiation and Kinetics Parameters	375
10.12.2.	Mechanism of Propagation	376
References		377

## 11. Metallurgically and Microbiologically Influenced Corrosion of Magnesium and Its Alloys 380

---

Overview	380
<i>A. Metallurgically Influenced Corrosion of Magnesium Alloys</i> 381	
11.1.	Casting Alloys and Alloying Elements 381
11.1.1.	Casting Alloys 381
11.1.2.	Magnesium–Rare Earth, Magnesium–Thorium, and Magnesium–Silver Alloys 382
11.1.3.	Alloying Elements and Tolerance Limit 382
11.2.	Corrosion Influenced By Metallurgical Properties 388
11.2.1.	Galvanic Corrosion and Secondary Phases 388
11.2.2.	Intergranular Corrosion 391
11.2.3.	Exfoliation Corrosion 392
11.2.4.	High-Temperature Corrosion and Creep Deformation 393
11.2.5.	Microstructure and Corrosion Creep of Magnesium Die-Cast Alloys 393
11.2.6.	The OCP, $i_{\text{corr}}$ , and Corrosion Creep 395
11.2.7.	Corrosion Creep and Aging 396
11.2.8.	Corrosion Creep of High-Strength AE42 and MEZ 397
11.3.	Influence of the Microstructure, Different Phases, and Welding 397
11.3.1.	Influence of Heat Treatments 397
11.3.2.	Effect of Rapid Solidification 399
11.3.3.	Influence of the Microstructure of Some Mg Alloys 401
11.3.4.	Influence of Joining and Welding 408
11.3.5.	Cold Chamber Processes 411
11.3.6.	Hot Chamber Processes and Corrosion Resistance of Thin Plates 418

*B. MIC of Magnesium and Magnesium Alloys* 421

11.4. Rational Degradation 422

11.4.1. Behavior of Sacrificial Magnesium 422

11.4.2. Rational Biocorrosion of Mg and Its Alloys in the Human Body 423

11.5. Stress Corrosion Cracking and Implants 424

11.6. Approaches to Control Biodegradation 424

11.6.1. Alloying 424

11.6.2. Surface Treatment (Anodizing) 426

11.6.3. Magnesium Implants and Bone Surgery 426

References 429

**12. Mechanically Assisted Corrosion of Magnesium and Its Alloys 433**

---

Overview 433

12.1. Erosion Corrosion and Fretting Fatigue Corrosion 433

12.1.1. Erosion Corrosion 433

12.1.2. Fretting Fatigue Corrosion 435

12.2. Corrosion Fatigue of Magnesium Alloys 435

12.2.1. Corrosion Fatigue of Cast Magnesium Alloys 436

12.2.2. Corrosion Fatigue of High-Strength Magnesium Alloys 440

12.2.3. Crack Propagation of Wrought Extruded Alloys 440

12.2.4. Welding and Corrosion Fatigue of AZ31 446

12.2.5. Mechanisms of Corrosion Fatigue: Initiation and Propagation 448

12.2.6. Prevention of Corrosion Fatigue 449

References 450

**13. Environmentally Induced Corrosion of Magnesium and Its Alloys 452**

---

Overview 452

13.1. Use of Magnesium Alloys and Stress-Corrosion Cracking Failures 452

13.2. Key Parameters 453

13.2.1. Alloy Composition and Magnesium Impurities 453

13.2.2. Microstructure and Crack Morphology 454

13.2.3. Effect of Stress 456

13.2.4. Effect of the Environment 456

13.3. Influence of Other Forms or Types of Corrosion on SCC 459

13.3.1. Effect of General Corrosion 459

13.3.2. Bimetallic or Galvanic Corrosion 459

13.3.3. Pitting and Localized Corrosion 459

13.3.4. Welded Material and SCC 460

13.3.5. Environment-Enhanced Creep and SCC of Mg Alloys 461

13.4. Propagation Mechanisms of Corrosion 463

13.4.1. Electrochemical Dissolution Models 463

13.4.2. Hydrogen Embrittlement 464

13.5. SCC-HE of Some Magnesium Alloys 467

13.6. SCC Prevention 473

References 473

**Part Four Coating and Testing**

**14. Aluminum Coatings: Description and Testing 479**

---

Overview 479

14.1. Inhibitors 481

14.2. Metallic Coatings 481

14.2.1.	Conventional Plating and Electroless Plating of Aluminum	482	15.2.1.	Metallic Coatings	514
14.2.2.	Surface Preparation for Thermal Spraying	482	15.2.2.	Chemical Conversion Surface Treatments	516
14.2.3.	Sacrificial Protection by Aluminum Alloys	483	15.3.	Anodic Treatments	521
14.2.4.	Aluminum Powder as a Coating	485	15.3.1.	Anodizing Description and Approaches	521
14.2.5.	Cathodic Protection of Aluminum Alloys	485	15.3.2.	Formation of Anodized Coatings	523
14.3.	Conversion Coating	486	15.3.3.	Properties and Chemical Composition	526
14.3.1.	Phosphates and/or Chromates	487	15.3.4.	Some Industrial and Developing Anodizing Processes	526
14.3.2.	Chromate–Phosphate Treatments	490	15.3.5.	Forms of Surface Corrosion: Anodized or with Conversion Treatments	533
14.3.3.	Chromate Alternatives	491	15.4.	Surface Modification	539
14.4.	Anodization	496	15.4.1.	Chemical and Physical Vapor Deposition	539
14.5.	Organic Finishing	503	15.4.2.	The H-Coat and Magnesium Hydrides	541
14.5.1.	Thermoplastic Coatings or Liquors	503	15.5.	Electrochemical Characterization of the Metal–Film Interface	549
14.5.2.	Converted Coating During or After Application	503	15.5.1.	OCP and Polarization Studies of the Metal–Oxide Interface	549
14.5.3.	Coatings Containing Metals More Active than Aluminum	505	15.5.2.	Impedance Measurements	550
14.5.4.	Electrodeposited Coatings	506	15.6.	Organic Finishing and Corrosion Testing of Coated Material	554
14.6.	Corrosion Testing of Coated Metal	507	15.6.1.	Organic Coatings	554
14.6.1.	Electrochemical Testing of Coatings	507	15.6.2.	Conventional Corrosion Testing of Coated Metal	556
14.6.2.	Conventional Testing	508	References	561	
14.6.3.	Corrosion Fatigue of Thermal Spraying of Aluminum as a Coating	508

<b>15. Magnesium Coatings: Description and Testing 512</b>					
<hr/>					
	Overview	512			
15.1.	General Approach and Surface Preparation	512			
15.2.	Metallic and Conversion Coatings	514			
	Overview	567			
16.1.	Corrosion Testing Approaches and Methods of Investigation	568			
16.1.1.	Testing Approach	568			
16.1.2.	Categories of Corrosion Testing	568			
16.1.3.	Testing Duration	569			
16.1.4.	Testing Modes	570			
16.1.5.	Removal of Corrosion Products	570			

## Part Five Evaluation and Testing

### 16. Conventional and Electrochemical Methods of Investigation 567

Overview 567

16.1.	Corrosion Testing Approaches and Methods of Investigation	568
16.1.1.	Testing Approach	568
16.1.2.	Categories of Corrosion Testing	568
16.1.3.	Testing Duration	569
16.1.4.	Testing Modes	570
16.1.5.	Removal of Corrosion Products	570

16.2. Physical and Mechanical Testing of Corroded Materials	571	<b>17. Evaluation of Corrosion Forms of Aluminum and Its Alloys</b>	<b>621</b>
16.2.1. Visual and Microscopic Techniques of Testing	571	Overview	621
16.2.2. Nondestructive Evaluation Techniques	573	17.1. General Corrosion of Aluminum and Its Alloys	624
16.2.3. Mechanical Testing	575	17.2. Galvanic Corrosion	625
16.2.4. Chemical Analysis	575	17.2.1. General Considerations	625
16.2.5. Surface Chemical Analysis	577	17.2.2. Influence of the Composition and Microstructure	627
16.2.6. Published Data of Performance and Corrosion Resistance	577	17.2.3. Electrochemical Testing	627
16.3. Electrochemical Polarization Studies	579	17.3. Localized Corrosion of Aluminum and Its Alloys	628
16.3.1. Measurements of the Corrosion Potential	580	17.3.1. Pitting Corrosion	628
16.3.2. Potentiodynamic Methods	580	17.3.2. Crevice Corrosion	640
16.3.3. Cyclovoltammetry Techniques and Pitting	583	17.3.3. Filiform Corrosion Testing of Al Alloys	641
16.3.4. Potentiostatic, Galvanostatic, and Galvanodynamic Methods	583	17.4. Metallurgically Influenced Corrosion	641
16.4. The ac Electrochemical Impedance Spectroscopy Technique	584	17.4.1. Intergranular Corrosion Testing	641
16.4.1. Introduction	584	17.4.2. Exfoliation Testing	642
16.4.2. EIS Terms and Equivalent Circuits	585	17.4.3. Joining and Testing	643
16.4.3. Impedance Plots	589	17.5. MIC and Biodegradation Evaluation	643
16.5. Electrochemical Noise Measurements	594	17.6. Mechanically Influenced Corrosion of Aluminum and Its Alloys	646
16.5.1. Historical and Electrochemical Noise Definition	594	17.6.1. Erosion Corrosion Testing	646
16.5.2. EN Generation and Data Acquisition Systems	596	17.6.2. Corrosion Fatigue Testing	647
16.5.3. Analysis of ENM Data	600	17.7. Environmentally Influenced Corrosion	650
16.5.4. Potentiodynamic, Potentiostatic, and Galvanostatic EN Studies	612	17.7.1. SCC Testing Procedures of Aluminum Alloys	651
16.6. Scanning Reference Electrode Technique	613	17.7.2. Test Specimens	653
16.7. Microsystems and Wire Beam Electrode	616	17.7.3. Stressors	654
16.7.1. Microsystems and Atomic Force Microscopy	616	17.7.4. Fracture Morphology and SCC of Aluminum Alloys	657
16.7.2. Wire Beam Electrode	617	References	659
References	618	<b>18. Evaluation of Corrosion Forms of Magnesium and Its Alloys</b>	<b>663</b>
		Overview	663
		18.1. Testing Solutions	664
		18.1.1. Hydroxide Solutions	664

18.1.2.	Chloride, Sulfate, and Hydroxide Solutions	665
18.1.3.	ASTM D1384-96 Corrosive Water	665
18.1.4.	Buffered Solutions	665
18.2.	General Corrosion Form	666
18.2.1.	Immersion Testing and Corrosion Rate	666
18.2.2.	Salt Spray Corrosion Test	669
18.2.3.	Some Electrochemical Methods of Investigation	671
18.3.	Galvanic or Bimetallic Corrosion of Magnesium and Its Alloys	677
18.4.	Localized Corrosion of Magnesium and Its Alloys	678
18.4.1.	Open Circuit Potential and Pitting Corrosion Studies	678
18.4.2.	Electrochemical Noise Measurements	680
18.4.3.	Magnesium SRET Studies	684
18.5.	Metallurgically Influenced Corrosion of Magnesium and Its Alloys	688
18.6.	MIC and Biodegradation of Magnesium and Its Alloys	688
18.7.	Corrosion Fatigue	689
18.8.	SCC Testing and Evaluation of Magnesium Alloys	690
18.8.1.	Static Loading of Smooth Specimens and General Considerations	690
18.8.2.	Stresses	691
18.8.3.	Solutions and Operational Conditions	691
18.8.4.	Constant Extension Rate and Linearly Increasing Stress Tests	693
18.8.5.	SCC CERT Versus LIST Techniques	695

Part Six Bibliography, International Units, and Abbreviations

**Appendix 1. Corrosion and Prevention Books, Data, and ASTM Standards 701**

A1.1.	Some Recommended Books on Corrosion	701
A1.2.	Bibliography of Corrosion Data for Performance of Materials	701
A1.3.	ASTM Standards	702

**Appendix 2. International Units and Some Equations 703**

A2.1.	Constants, Conventions, and Key Equations	703
A2.1.1.	Constants	703
A2.1.2.	Conventions	704
A2.1.3.	Key Equations	704
A2.2.	Examples of Reference Electrodes and Metallic and Ionic Reduction Reactions	706
A2.3.	Electrochemical Cells and Their Potentials	706
A2.4.	Standard Electrode Potential of Cations ( $T=25^{\circ}\text{C}$ )	707
A2.5.	The Periodic Table	708

**Appendix 3. Abbreviations and Symbols 709**

**Index 713**
