

Contents

Preface	xi
About the Authors	xv
CHAPTER 1	
Introduction	1
In Praise of Mathematical Finance	3
Studies of the Use of Quantitative Equity Management	9
Looking Ahead for Quantitative Equity Investing	45
CHAPTER 2	
Financial Econometrics I: Linear Regressions	47
Historical Notes	47
Covariance and Correlation	49
Regressions, Linear Regressions, and Projections	61
Multivariate Regression	76
Quantile Regressions	78
Regression Diagnostic	80
Robust Estimation of Regressions	83
Classification and Regression Trees	96
Summary	99
CHAPTER 3	
Financial Econometrics II: Time Series	101
Stochastic Processes	101
Time Series	102
Stable Vector Autoregressive Processes	110
Integrated and Cointegrated Variables	114
Estimation of Stable Vector Autoregressive (VAR) Models	120
Estimating the Number of Lags	137
Autocorrelation and Distributional Properties of Residuals	139
Stationary Autoregressive Distributed Lag Models	140

Estimation of Nonstationary VAR Models	141
Estimation with Canonical Correlations	151
Estimation with Principal Component Analysis	153
Estimation with the Eigenvalues of the Companion Matrix	154
Nonlinear Models in Finance	155
Causality	156
Summary	157
CHAPTER 4	
Common Pitfalls in Financial Modeling	159
Theory and Engineering	159
Engineering and Theoretical Science	161
Engineering and Product Design in Finance	163
Learning, Theoretical, and Hybrid Approaches to Portfolio Management	164
Sample Biases	165
The Bias in Averages	167
Pitfalls in Choosing from Large Data Sets	170
Time Aggregation of Models and Pitfalls in the Selection of Data Frequency	173
Model Risk and its Mitigation	174
Summary	193
CHAPTER 5	
Factor Models and Their Estimation	195
The Notion of Factors	195
Static Factor Models	196
Factor Analysis and Principal Components Analysis	205
Why Factor Models of Returns	219
Approximate Factor Models of Returns	221
Dynamic Factor Models	222
Summary	239
CHAPTER 6	
Factor-Based Trading Strategies I: Factor Construction and Analysis	243
Factor-Based Trading	245
Developing Factor-Based Trading Strategies	247
Risk to Trading Strategies	249
Desirable Properties of Factors	251
Sources for Factors	251

Building Factors from Company Characteristics	253
Working with Data	253
Analysis of Factor Data	261
Summary	266
CHAPTER 7	
Factor-Based Trading Strategies II: Cross-Sectional Models and Trading Strategies	269
Cross-Sectional Methods for Evaluation of Factor Premiums	270
Factor Models	278
Performance Evaluation of Factors	288
Model Construction Methodologies for a Factor-Based Trading Strategy	295
Backtesting	306
Backtesting Our Factor Trading Strategy	308
Summary	309
CHAPTER 8	
Portfolio Optimization: Basic Theory and Practice	313
Mean-Variance Analysis: Overview	314
Classical Framework for Mean-Variance Optimization	317
Mean-Variance Optimization with a Risk-Free Asset	321
Portfolio Constraints Commonly Used in Practice	327
Estimating the Inputs Used in Mean-Variance Optimization: Expected Return and Risk	333
Portfolio Optimization with Other Risk Measures	342
Summary	357
CHAPTER 9	
Portfolio Optimization: Bayesian Techniques and the Black-Litterman Model	361
Practical Problems Encountered in Mean-Variance Optimization	362
Shrinkage Estimation	369
The Black-Litterman Model	373
Summary	394
CHAPTER 10	
Robust Portfolio Optimization	395
Robust Mean-Variance Formulations	396
Using Robust Mean-Variance Portfolio Optimization in Practice	411

Some Practical Remarks on Robust Portfolio Optimization Models	416
Summary	418
CHAPTER 11	
Transaction Costs and Trade Execution	419
A Taxonomy of Transaction Costs	420
Liquidity and Transaction Costs	427
Market Impact Measurements and Empirical Findings	430
Forecasting and Modeling Market Impact	433
Incorporating Transaction Costs in Asset-Allocation Models	439
Integrated Portfolio Management: Beyond Expected Return and Portfolio Risk	444
Summary	446
CHAPTER 12	
Investment Management and Algorithmic Trading	449
Market Impact and the Order Book	450
Optimal Execution	452
Impact Models	455
Popular Algorithmic Trading Strategies	457
What Is Next?	465
Some Comments about the High-Frequency Arms Race	467
Summary	470
APPENDIX A	
Data Descriptions and Factor Definitions	473
The MSCI World Index	473
One-Month LIBOR	482
The Compustat Point-in-Time, IBES Consensus Databases and Factor Definitions	483
APPENDIX B	
Summary of Well-Known Factors and Their Underlying Economic Rationale	487
APPENDIX C	
Review of Eigenvalues and Eigenvectors	493
The SWEEP Operator	494
Index	497
