|---|-------------|
| Preface | xvii |
| CHAPTER 1 | |
| Introduction | 1 |
| 1.1 The Portfolio Management Process | 1 |
| 1.2 The Security Analyst's Job | 1 |
| 1.3 Portfolio Analysis | 2 |
| 1.3.1 Basic Assumptions | 3 |
| 1.3.2 Reconsidering the Assumptions | 3 |
| 1.4 Portfolio Selection | 5 |
| 1.5 The Mathematics is Segregated | 6 |
| 1.6 Topics to be Discussed | 6 |
| Appendix: Various Rates of Return | 7 |
| A1.1 Calculating the Holding Period Return | 7 |
| A1.2 After-Tax Returns | 8 |
| A1.3 Discrete and Continuously Compounded Returns | 8 |
| PART ONE | |
| Probability Foundations | |
| CHAPTER 2 | |
| Assessing Risk | 13 |
| 2.1 Mathematical Expectation | 13 |
| 2.2 What Is Risk? | 15 |
| 2.3 Expected Return | 16 |
| 2.4 Risk of a Security | 17 |
| 2.5 Covariance of Returns | 18 |
| 2.6 Correlation of Returns | 19 |
| 2.7 Using Historical Returns | 20 |
| 2.8 Data Input Requirements | 22 |
| 2.9 Portfolio Weights | 22 |
| 2.10 A Portfolio's Expected Return | 23 |
| 2.11 Portfolio Risk | 23 |
| 2.12 Summary of Notations and Formulas | 27 |
| CHAPTER 3 | |
| Risk and Diversification | 29 |
| 3.1 Reconsidering Risk | 29 |
| 3.1.1 Symmetric Probability Distributions | 31 |
| 3.1.2 Fundamental Security Analysis | 32 |

| | | |
|-------|--|----|
| 3.2 | Utility Theory | 32 |
| 3.2.1 | Numerical Example | 33 |
| 3.2.2 | Indifference Curves | 35 |
| 3.3 | Risk-Return Space | 36 |
| 3.4 | Diversification | 38 |
| 3.4.1 | Diversification Illustrated | 38 |
| 3.4.2 | Risky A + Risky B = Riskless Portfolio | 39 |
| 3.4.3 | Graphical Analysis | 40 |
| 3.5 | Conclusions | 41 |

PART TWO

Utility Foundations

CHAPTER 4

Single-Period Utility Analysis

45

| | | |
|--------|---|----|
| 4.1 | Basic Utility Axioms | 46 |
| 4.2 | The Utility of Wealth Function | 47 |
| 4.3 | Utility of Wealth and Returns | 47 |
| 4.4 | Expected Utility of Returns | 48 |
| 4.5 | Risk Attitudes | 52 |
| 4.5.1 | Risk Aversion | 52 |
| 4.5.2 | Risk-Loving Behavior | 56 |
| 4.5.3 | Risk-Neutral Behavior | 57 |
| 4.6 | Absolute Risk Aversion | 59 |
| 4.7 | Relative Risk Aversion | 60 |
| 4.8 | Measuring Risk Aversion | 62 |
| 4.8.1 | Assumptions | 62 |
| 4.8.2 | Power, Logarithmic, and Quadratic Utility | 62 |
| 4.8.3 | Isoelastic Utility Functions | 64 |
| 4.8.4 | Myopic, but Optimal | 65 |
| 4.9 | Portfolio Analysis | 66 |
| 4.9.1 | Quadratic Utility Functions | 67 |
| 4.9.2 | Using Quadratic Approximations to Delineate Max[E(Utility)] Portfolios | 68 |
| 4.9.3 | Normally Distributed Returns | 69 |
| 4.10 | Indifference Curves | 69 |
| 4.10.1 | Selecting Investments | 71 |
| 4.10.2 | Risk-Aversion Measures | 73 |
| 4.11 | Summary and Conclusions | 74 |
| | Appendix: Risk Aversion and Indifference Curves | 75 |
| A4.1 | Absolute Risk Aversion (ARA) | 75 |
| A4.2 | Relative Risk Aversion (RRA) | 76 |
| A4.3 | Expected Utility of Wealth | 77 |
| A4.4 | Slopes of Indifference Curves | 77 |
| A4.5 | Indifference Curves for Quadratic Utility | 79 |

PART THREE**Mean-Variance Portfolio Analysis****CHAPTER 5****Graphical Portfolio Analysis****85**

| | | |
|-------|--|-----|
| 5.1 | Delineating Efficient Portfolios | 85 |
| 5.2 | Portfolio Analysis Inputs | 86 |
| 5.3 | Two-Asset Isomean Lines | 87 |
| 5.4 | Two-Asset Isovariance Ellipses | 90 |
| 5.5 | Three-Asset Portfolio Analysis | 92 |
| 5.5.1 | Solving for One Variable Implicitly | 93 |
| 5.5.2 | Isomean Lines | 96 |
| 5.5.3 | Isovariance Ellipses | 97 |
| 5.5.4 | The Critical Line | 99 |
| 5.5.5 | Inefficient Portfolios | 101 |
| 5.6 | Legitimate Portfolios | 102 |
| 5.7 | “Unusual” Graphical Solutions Don’t Exist | 103 |
| 5.8 | Representing Constraints Graphically | 103 |
| 5.9 | The Interior Decorator Fallacy | 103 |
| 5.10 | Summary | 104 |
| | Appendix: Quadratic Equations | 105 |
| A5.1 | Quadratic Equations | 105 |
| A5.2 | Analysis of Quadratics in Two Unknowns | 106 |
| A5.3 | Analysis of Quadratics in One Unknown | 107 |
| A5.4 | Solving an Ellipse | 108 |
| A5.5 | Solving for Lines Tangent to a Set of Ellipses | 110 |

CHAPTER 6**Efficient Portfolios****113**

| | | |
|-------|--|-----|
| 6.1 | Risk and Return for Two-Asset Portfolios | 113 |
| 6.2 | The Opportunity Set | 114 |
| 6.2.1 | The Two-Security Case | 114 |
| 6.2.2 | Minimizing Risk in the Two-Security Case | 116 |
| 6.2.3 | The Three-Security Case | 117 |
| 6.2.4 | The n -Security Case | 119 |
| 6.3 | Markowitz Diversification | 120 |
| 6.4 | Efficient Frontier without the Risk-Free Asset | 123 |
| 6.5 | Introducing a Risk-Free Asset | 126 |
| 6.6 | Summary and Conclusions | 131 |
| | Appendix: Equations for a Relationship between $E(r_p)$ and σ_p | 131 |

CHAPTER 7**Advanced Mathematical Portfolio Analysis****135**

| | | |
|-------|--|-----|
| 7.1 | Efficient Portfolios without a Risk-Free Asset | 135 |
| 7.1.1 | A General Formulation | 135 |
| 7.1.2 | Formulating with Concise Matrix Notation | 140 |

| | | |
|-------|---|-----|
| 7.1.3 | The Two-Fund Separation Theorem | 145 |
| 7.1.4 | Caveat about Negative Weights | 146 |
| 7.2 | Efficient Portfolios with a Risk-Free Asset | 146 |
| 7.3 | Identifying the Tangency Portfolio | 150 |
| 7.4 | Summary and Conclusions | 152 |
| | Appendix: Mathematical Derivation of the Efficient Frontier | 152 |
| A7.1 | No Risk-Free Asset | 152 |
| A7.2 | With a Risk-Free Asset | 156 |

CHAPTER 8**Index Models and Return-Generating Process****165**

| | | |
|-------|--|-----|
| 8.1 | Single-Index Models | 165 |
| 8.1.1 | Return-Generating Functions | 165 |
| 8.1.2 | Estimating the Parameters | 168 |
| 8.1.3 | The Single-Index Model Using Excess Returns | 171 |
| 8.1.4 | The Riskless Rate Can Fluctuate | 173 |
| 8.1.5 | Diversification | 176 |
| 8.1.6 | About the Single-Index Model | 177 |
| 8.2 | Efficient Frontier and the Single-Index Model | 178 |
| 8.3 | Two-Index Models | 186 |
| 8.3.1 | Generating Inputs | 187 |
| 8.3.2 | Diversification | 188 |
| 8.4 | Multi-Index Models | 189 |
| 8.5 | Conclusions | 190 |
| | Appendix: Index Models | 191 |
| A8.1 | Solving for Efficient Portfolios with the Single-Index Model | 191 |
| A8.2 | Variance Decomposition | 196 |
| A8.3 | Orthogonalizing Multiple Indexes | 196 |

PART FOUR**Non-Mean-Variance Portfolios****CHAPTER 9****Non-Normal Distributions of Returns****201**

| | | |
|-------|---|-----|
| 9.1 | Stable Paretian Distributions | 201 |
| 9.2 | The Student's t -Distribution | 204 |
| 9.3 | Mixtures of Normal Distributions | 204 |
| 9.3.1 | Discrete Mixtures of Normal Distributions | 204 |
| 9.3.2 | Sequential Mixtures of Normal Distributions | 205 |
| 9.4 | Poisson Jump-Diffusion Process | 206 |
| 9.5 | Lognormal Distributions | 206 |
| 9.5.1 | Specifications of Lognormal Distributions | 207 |
| 9.5.2 | Portfolio Analysis under Lognormality | 208 |
| 9.6 | Conclusions | 213 |

CHAPTER 10**Non-Mean-Variance Investment Decisions****215**

| | | |
|---|--|-----|
| 10.1 | Geometric Mean Return Criterion | 215 |
| 10.1.1 | Maximizing the Terminal Wealth | 216 |
| 10.1.2 | Log Utility and the GMR Criterion | 216 |
| 10.1.3 | Diversification and the GMR | 217 |
| 10.2 | The Safety-First Criterion | 218 |
| 10.2.1 | Roy's Safety-First Criterion | 218 |
| 10.2.2 | Kataoka's Safety-First Criterion | 222 |
| 10.2.3 | Telser's Safety-First Criterion | 225 |
| 10.3 | Semivariance Analysis | 228 |
| 10.3.1 | Definition of Semivariance | 228 |
| 10.3.2 | Utility Theory | 230 |
| 10.3.3 | Portfolio Analysis with the Semivariance | 231 |
| 10.3.4 | Capital Market Theory with the Semivariance | 234 |
| 10.3.5 | Summary about Semivariance | 236 |
| 10.4 | Stochastic Dominance Criterion | 236 |
| 10.4.1 | First-Order Stochastic Dominance | 236 |
| 10.4.2 | Second-Order Stochastic Dominance | 241 |
| 10.4.3 | Third-Order Stochastic Dominance | 244 |
| 10.4.4 | Summary of Stochastic Dominance Criterion | 245 |
| 10.5 | Mean-Variance-Skewness Analysis | 246 |
| 10.5.1 | Only Two Moments Can Be Inadequate | 246 |
| 10.5.2 | Portfolio Analysis in Three Moments | 247 |
| 10.5.3 | Efficient Frontier in Three-Dimensional Space | 249 |
| 10.5.4 | Undiversifiable Risk and Undiversifiable Skewness | 252 |
| 10.6 | Summary and Conclusions | 254 |
| Appendix A: Stochastic Dominance | | 254 |
| A10.1 | Proof for First-Order Stochastic Dominance | 254 |
| A10.2 | Proof That $F_A(r) \leq F_B(r)$ Is Equivalent to $E_A(r) \geq E_B(r)$ for Positive r | 255 |
| A10.3 | Proof for Second-Order Stochastic Dominance | 256 |
| A10.4 | Proof for Third-Order Stochastic Dominance | 257 |
| Appendix B: Expected Utility as a Function of Three Moments | | 257 |

CHAPTER 11**Risk Management: Value at Risk****261**

| | | |
|--------|------------------------------------|-----|
| 11.1 | VaR of a Single Asset | 261 |
| 11.2 | Portfolio VaR | 263 |
| 11.3 | Decomposition of a Portfolio's VaR | 265 |
| 11.3.1 | Marginal VaR | 265 |
| 11.3.2 | Incremental VaR | 266 |
| 11.3.3 | Component VaR | 267 |
| 11.4 | Other VaRs | 269 |
| 11.4.1 | Modified VaR (MVaR) | 269 |
| 11.4.2 | Conditional VaR (CVaR) | 270 |

| | | |
|--------|--|-----|
| 11.5 | Methods of Measuring VaR | 270 |
| 11.5.1 | Variance-Covariance (Delta-Normal) Method | 270 |
| 11.5.2 | Historical Simulation Method | 274 |
| 11.5.3 | Monte Carlo Simulation Method | 276 |
| 11.6 | Estimation of Volatilities | 277 |
| 11.6.1 | Unconditional Variance | 277 |
| 11.6.2 | Simple Moving Average | 277 |
| 11.6.3 | Exponentially Weighted Moving Average | 278 |
| 11.6.4 | GARCH-Based Volatility | 278 |
| 11.6.5 | Volatility Measures Using Price Range | 279 |
| 11.6.6 | Implied Volatility | 281 |
| 11.7 | The Accuracy of VaR Models | 282 |
| 11.7.1 | Back-Testing | 283 |
| 11.7.2 | Stress Testing | 284 |
| 11.8 | Summary and Conclusions | 285 |
| | Appendix: The Delta-Gamma Method | 285 |

PART FIVE

Asset Pricing Models

CHAPTER 12

The Capital Asset Pricing Model

291

| | | |
|--------|-----------------------------------|-----|
| 12.1 | Underlying Assumptions | 291 |
| 12.2 | The Capital Market Line | 292 |
| 12.2.1 | The Market Portfolio | 292 |
| 12.2.2 | The Separation Theorem | 293 |
| 12.2.3 | Efficient Frontier Equation | 294 |
| 12.2.4 | Portfolio Selection | 294 |
| 12.3 | The Capital Asset Pricing Model | 295 |
| 12.3.1 | Background | 295 |
| 12.3.2 | Derivation of the CAPM | 296 |
| 12.4 | Over- and Under-priced Securities | 299 |
| 12.5 | The Market Model and the CAPM | 300 |
| 12.6 | Summary and Conclusions | 301 |
| | Appendix: Derivations of the CAPM | 301 |
| A12.1 | Other Approaches | 301 |
| A12.2 | Tangency Portfolio Research | 305 |

CHAPTER 13

Extensions of the Standard CAPM

311

| | | |
|--------|--|-----|
| 13.1 | Risk-Free Borrowing or Lending | 311 |
| 13.1.1 | The Zero-Beta Portfolio | 311 |
| 13.1.2 | No Risk-Free Borrowing | 314 |
| 13.1.3 | Lending and Borrowing Rates Can Differ | 314 |

| | | |
|--------|---|-----|
| 13.2 | Homogeneous Expectations | 316 |
| 13.2.1 | Investment Horizons | 316 |
| 13.2.2 | Multivariate Distribution of Returns | 317 |
| 13.3 | Perfect Markets | 318 |
| 13.3.1 | Taxes | 318 |
| 13.3.2 | Transaction Costs | 320 |
| 13.3.3 | Indivisibilities | 321 |
| 13.3.4 | Price Competition | 321 |
| 13.4 | Unmarketable Assets | 322 |
| 13.5 | Summary and Conclusions | 323 |
| | Appendix: Derivations of a Non-Standard CAPM | 324 |
| A13.1 | The Characteristics of the Zero-Beta Portfolio | 324 |
| A13.2 | Derivation of Brennan's After-Tax CAPM | 325 |
| A13.3 | Derivation of Mayers's CAPM for Nonmarketable Assets | 328 |

CHAPTER 14**Empirical Tests of the CAPM****333**

| | | |
|--------|--|-----|
| 14.1 | Time-Series Tests of the CAPM | 333 |
| 14.2 | Cross-Sectional Tests of the CAPM | 335 |
| 14.2.1 | Black, Jensen, and Scholes's (1972) Tests | 336 |
| 14.2.2 | Fama and MacBeth's (1973) Tests | 340 |
| 14.2.3 | Fama and French's (1992) Tests | 344 |
| 14.3 | Empirical Misspecifications in Cross-Sectional Regression Tests | 345 |
| 14.3.1 | The Errors-in-Variables Problem | 346 |
| 14.3.2 | Sensitivity of Beta to the Return Measurement Intervals | 351 |
| 14.4 | Multivariate Tests | 353 |
| 14.4.1 | Gibbons's (1982) Test | 353 |
| 14.4.2 | Starbaugh's (1982) Test | 355 |
| 14.4.3 | Jobson and Korkie's (1982) Test | 355 |
| 14.4.4 | Shanken's (1985) Test | 356 |
| 14.4.5 | Generalized Method of Moment (GMM) Tests | 356 |
| 14.5 | Is the CAPM Testable? | 356 |
| 14.6 | Summary and Conclusions | 357 |

CHAPTER 15**Continuous-Time Asset Pricing Models****361**

| | | |
|--------|---|-----|
| 15.1 | Intertemporal CAPM (ICAPM) | 361 |
| 15.2 | The Consumption-Based CAPM (CCAPM) | 363 |
| 15.2.1 | Derivation | 363 |
| 15.2.2 | The Consumption-Based CAPM with a Power Utility Function | 365 |
| 15.3 | Conclusions | 366 |
| | Appendix: Lognormality and the Consumption-Based CAPM | 367 |
| A15.1 | Lognormality | 367 |
| A15.2 | The Consumption-Based CAPM with Lognormality | 367 |

CHAPTER 16**Arbitrage Pricing Theory****371**

| | | |
|--------|--|-----|
| 16.1 | Arbitrage Concepts | 371 |
| 16.2 | Index Arbitrage | 375 |
| 16.2.1 | Basic Ideas of Index Arbitrage | 376 |
| 16.2.2 | Index Arbitrage and Program Trading | 377 |
| 16.2.3 | Use of ETFs for Index Arbitrage | 377 |
| 16.3 | The Asset Pricing Equation | 378 |
| 16.3.1 | One Single Factor with No Residual Risk | 379 |
| 16.3.2 | Two Factors with No Residual Risk | 380 |
| 16.3.3 | K Factors with No Residual Risk | 381 |
| 16.3.4 | K Factors with Residual Risk | 382 |
| 16.4 | Asset Pricing on a Security Market Plane | 383 |
| 16.5 | Contrasting APT with CAPM | 385 |
| 16.6 | Empirical Evidence | 386 |
| 16.7 | Comparing the APT and CAPM Empirically | 388 |
| 16.8 | Conclusions | 389 |

PART SIX**Implementing the Theory****CHAPTER 17****Portfolio Construction and Selection****395**

| | | |
|--------|--|-----|
| 17.1 | Efficient Markets | 395 |
| 17.1.1 | Fama's Classifications | 395 |
| 17.1.2 | Formal Models | 396 |
| 17.2 | Using Portfolio Theories to Construct and Select Portfolios | 398 |
| 17.3 | Security Analysis | 400 |
| 17.4 | Market Timing | 401 |
| 17.4.1 | Forecasting Beta | 401 |
| 17.4.2 | Nonstationarity of Beta | 404 |
| 17.4.3 | Determinants of Beta | 406 |
| 17.5 | Diversification | 407 |
| 17.5.1 | Simple Diversification | 408 |
| 17.5.2 | Timing and Diversification | 409 |
| 17.5.3 | International Diversification | 411 |
| 17.6 | Constructing an Active Portfolio | 415 |
| 17.7 | Portfolio Revision | 424 |
| 17.7.1 | Portfolio Revision Costs | 424 |
| 17.7.2 | Controlled Transition | 426 |
| 17.7.3 | The Attainable Efficient Frontier | 428 |
| 17.7.4 | A Turnover-Constrained Approach | 428 |
| 17.8 | Summary and Conclusions | 430 |
| | Appendix: Proofs for Some Ratios from Active Portfolios | 431 |
| A17.1 | Proof for $\alpha_A/\sigma_{\varepsilon_A}^2 = \sum_{i=1}^K (\alpha_i/\sigma_{\varepsilon_i}^2)$ | 431 |
| A17.2 | Proof for $(\alpha_A\beta_A/\sigma_{\varepsilon_A}^2) = \sum_{i=1}^K (\alpha_i\beta_i/\sigma_{\varepsilon_i}^2)$ | 431 |
| A17.3 | Proof for $(\alpha_A^2/\sigma_{\varepsilon_A}^2) = \sum_{i=1}^K (\alpha_i^2/\sigma_{\varepsilon_i}^2)$ | 432 |

| | | |
|---|---|------------|
| CHAPTER 18 | | |
| Portfolio Performance Evaluation | | 435 |
| 18.1 | Mutual Fund Returns | 435 |
| 18.2 | Portfolio Performance Analysis in the Good Old Days | 436 |
| 18.3 | Capital Market Theory Assumptions | 438 |
| 18.4 | Single-Parameter Portfolio Performance Measures | 438 |
| 18.4.1 | Sharpe's Reward-to-Variability Ratio | 439 |
| 18.4.2 | Treynor's Reward-to-Risk Ratio | 441 |
| 18.4.3 | Jensen's Measure | 444 |
| 18.4.4 | Information Ratio (or Appraisal Ratio) | 447 |
| 18.4.5 | M^2 Measure | 448 |
| 18.5 | Market Timing | 449 |
| 18.5.1 | Interpreting the Market Timing Coefficient | 450 |
| 18.5.2 | Henriksson and Merton's Model | 451 |
| 18.5.3 | Descriptive Comments | 452 |
| 18.6 | Comparing Single-Parameter Portfolio Performance Measures | 452 |
| 18.6.1 | Ranking Undiversified Investments | 452 |
| 18.6.2 | Contrasting the Three Models | 453 |
| 18.6.3 | Survivorship Bias | 454 |
| 18.7 | The Index of Total Portfolio Risk (ITPR) and the Portfolio Beta | 454 |
| 18.8 | Measurement Problems | 457 |
| 18.8.1 | Measurement of the Market Portfolio's Returns | 458 |
| 18.8.2 | Nonstationarity of Portfolio Return Distributions | 460 |
| 18.9 | Do Winners or Losers Repeat? | 461 |
| 18.10 | Summary about Investment Performance Evaluation | 465 |
| Appendix: | Sharpe Ratio of an Active Portfolio | 467 |
| A18.1 | Proof that $S_q^2 = S_m^2 + [\alpha_A/\sigma(\varepsilon_A)]^2$ | 467 |
| CHAPTER 19 | | |
| Performance Attribution | | 473 |
| 19.1 | Factor Model Analysis | 474 |
| 19.2 | Return-Based Style Analysis | 475 |
| 19.3 | Return Decomposition-Based Analysis | 479 |
| 19.4 | Conclusions | 485 |
| 19.4.1 | Detrimental Uses of Portfolio Performance Attribution | 486 |
| 19.4.2 | Symbiotic Possibilities | 486 |
| Appendix: | Regression Coefficients Estimation with Constraints | 486 |
| A19.1 | With No Constraints | 487 |
| A19.2 | With the Constraint of $\sum_{k=1}^K \beta_{ik} = 1$ | 487 |
| CHAPTER 20 | | |
| Stock Market Developments | | 489 |
| 20.1 | Recent NYSE Consolidations | 489 |
| 20.1.1 | Archipelago | 490 |
| 20.1.2 | Pacific Stock Exchange (PSE) | 490 |

| | | |
|--------|--|------------|
| 20.1.3 | ArcaEx | 490 |
| 20.1.4 | New York Stock Exchange (NYSE) | 490 |
| 20.1.5 | NYSE Group | 491 |
| 20.1.6 | NYSE Diversifies Internationally | 491 |
| 20.1.7 | NYSE Alliances | 491 |
| 20.2 | International Securities Exchange (ISE) | 492 |
| 20.3 | Nasdaq | 492 |
| 20.3.1 | London Stock Exchange (LSE) | 493 |
| 20.3.2 | OMX Group | 493 |
| 20.3.3 | Bourse Dubai | 493 |
| 20.3.4 | Boston Stock Exchange (BSE) | 494 |
| 20.3.5 | Philadelphia Stock Exchange (PHLX) | 494 |
| 20.4 | Downward Pressures on Transactions Costs | 494 |
| 20.4.1 | A National Market System (NMS) | 495 |
| 20.4.2 | The SEC's Reg ATS | 496 |
| 20.4.3 | Reg FD | 496 |
| 20.4.4 | Decimalization of Stock Prices | 496 |
| 20.4.5 | Technological Advances | 496 |
| 20.5 | The Venerable Limit Order | 497 |
| 20.5.1 | What Are Limit Orders? | 497 |
| 20.5.2 | Creating Market Liquidity | 498 |
| 20.6 | Market Microstructure | 498 |
| 20.6.1 | Inventory Management | 498 |
| 20.6.2 | Brokers | 499 |
| 20.7 | High-Frequency Trading | 499 |
| 20.8 | Alternative Trading Systems (ATSs) | 500 |
| 20.8.1 | Crossing Networks | 500 |
| 20.8.2 | Dark Pools | 500 |
| 20.9 | Algorithmic Trading | 501 |
| 20.9.1 | Some Algorithmic Trading Applications | 501 |
| 20.9.2 | Trading Curbs | 503 |
| 20.9.3 | Conclusions about Algorithmic Trading | 504 |
| 20.10 | Symbiotic Stock Market Developments | 505 |
| 20.11 | Detrimental Stock Market Developments | 505 |
| 20.12 | Summary and Conclusions | 506 |
| | Mathematical Appendixes | 509 |
