Preface	xi
About the Authors	xvii
CHAPTER 1	
Basic Concepts: Sets, Functions, and Variables	1
Introduction	2
Sets and Set Operations	2
Distances and Quantities	6
Functions	10
Variables	10
Key Points	11
CHAPTER 2	
Differential Calculus	13
Introduction	14
Limits	15
Continuity	17
Total Variation	19
The Notion of Differentiation	19
Commonly Used Rules for Computing Derivatives	21
Higher-Order Derivatives	26
Taylor Series Expansion	34
Calculus in More Than One Variable	40
Key Points	41
CHAPTER 3	
Integral Calculus	43
Introduction	44
Riemann Integrals	44
Lebesgue-Stieltjes Integrals	47
Indefinite and Improper Integrals	48
The Fundamental Theorem of Calculus	51

Integral Transforms	52
Calculus in More Than One Variable	57
Key Points	57
CHAPTER 4	
Matrix Algebra	59
Introduction	60
Vectors and Matrices Defined	61
Square Matrices	63
Determinants	66
Systems of Linear Equations	68
Linear Independence and Rank	69
Hankel Matrix	70
Vector and Matrix Operations	72
Finance Application	78
Eigenvalues and Eigenvectors	81
Diagonalization and Similarity	82
Singular Value Decomposition	83
Key Points	83
CHAPTER 5	
Probability: Basic Concepts	85
Introduction	86
Representing Uncertainty with Mathematics	87
Probability in a Nutshell	89
Outcomes and Events	91
Probability	92
Measure	93
Random Variables	93
Integrals	94
Distributions and Distribution Functions	96
Random Vectors	97
Stochastic Processes	100
Probabilistic Representation of Financial Markets	102
Information Structures	103
Filtration	104
Key Points	106
CHAPTER 6	
Probability: Random Variables and Expectations	107
Introduction	109
Conditional Probability and Conditional Expectation	110

Moments and Correlation	112
Copula Functions	114
Sequences of Random Variables	116
Independent and Identically Distributed Sequences	117
Sum of Variables	118
Gaussian Variables	120
Approximating the Tails of a Probability Distribution: Cornish-Fisher Expansion and Hermite Polynomials	123
The Regression Function	129
Fat Tails and Stable Laws	131
Key Points	144
CHAPTER 7	
Optimization	147
Introduction	148
Maxima and Minima	149
Lagrange Multipliers	151
Numerical Algorithms	156
Calculus of Variations and Optimal Control Theory	161
Stochastic Programming	163
Application to Bond Portfolio: Liability-Funding Strategies	164
Key Points	178
CHAPTER 8	
Difference Equations	181
Introduction	182
The Lag Operator L	183
Homogeneous Difference Equations	183
Recursive Calculation of Values of Difference Equations	192
Nonhomogeneous Difference Equations	195
Systems of Linear Difference Equations	201
Systems of Homogeneous Linear Difference Equations	202
Key Points	209
CHAPTER 9	
Differential Equations	211
Introduction	212
Differential Equations Defined	213
Ordinary Differential Equations	213
Systems of Ordinary Differential Equations	216
Closed-Form Solutions of Ordinary Differential Equations	218
Numerical Solutions of Ordinary Differential Equations	222

x	CONTENTS
Nonlinear Dynamics and Chaos	228
Partial Differential Equations	231
Key Points	237
CHAPTER 10	
Stochastic Integrals	239
Introduction	240
The Intuition behind Stochastic Integrals	243
Brownian Motion Defined	248
Properties of Brownian Motion	254
Stochastic Integrals Defined	255
Some Properties of Itô Stochastic Integrals	259
Martingale Measures and the Girsanov Theorem	260
Key Points	266
CHAPTER 11	
Stochastic Differential Equations	267
Introduction	268
The Intuition behind Stochastic Differential Equations	269
Itô Processes	272
Stochastic Differential Equations	273
Generalization to Several Dimensions	276
Solution of Stochastic Differential Equations	278
Derivation of Itô's Lemma	282
Derivation of the Black-Scholes Option Pricing Formula	284
Key Points	291
Index	293
